*Plugin method to clean up internal created objects.*
- virtual QString `description ()` const =0  
*Returns a short description about the plugin.*
- virtual QString `details ()` const =0  
*Returns a long description about the plugin.*
- virtual QString `handbookChapter ()` const  
*Return the online handbook chapter from an handbook section corresponding to this plugin.*

- virtual QString [handbookReference](#) () const  
*Return the online handbook reference from an handbook chapter corresponding to this plugin.*
- virtual QString [handbookSection](#) () const  
*Return the online handbook section corresponding to this plugin.*
- virtual QIcon [icon](#) () const  
*Returns an icon for the plugin.*
- virtual QString [iid](#) () const =0  
*Returns the unique internal identification property of the plugin.*
- QString [libraryFileName](#) () const  
*Returns the file name of the library for this plugin.*
- virtual QString [name](#) () const =0  
*Returns the user-visible name of the plugin.*
- QStringList [pluginAuthors](#) () const  
*Return a list of authors as strings registered in this plugin.*
- void [setLibraryFileName](#) (const QString &)  
*Sets the file name of the library for this plugin.*
- void [setShouldLoaded](#) (bool b)  
*Accessor to adjust the should loaded plugin property.*
- virtual void [setup](#) (QObject \*const parent)=0  
*Plugin factory method to create all internal object instances for a given parent.*
- bool [shouldLoaded](#) () const  
*Return the should loaded property.*
- QString [version](#) () const  
*Return the internal version used to check the binary compatibility at run-time.*

## 9.432.1 Member Function Documentation

### 9.432.1.1 canRead()

```
virtual int Digikam::DPluginDImg::canRead (
    const QFileInfo & fileInfo,
    bool magic ) const [pure virtual]
```

The return value (1 - 100) is a priority. digiKam default loaders have a priority of 10, the QImage loader has a priority of 80 and the ImageMagick loader has a priority of 90. If the loader is to be used before the default loader, the value must be less than 10.

### 9.432.1.2 canWrite()

```
virtual int Digikam::DPluginDImg::canWrite (
    const QString & format ) const [pure virtual]
```

The return value (1 - 100) is a priority.

### 9.432.1.3 categories()

```
QStringList Digikam::DPluginDImg::categories ( ) const [inline], [override], [virtual]
```

Implements [Digikam::DPlugin](#).

#### 9.432.1.4 count()

```
int Digikam::DPluginDImg::count ( ) const [inline], [override], [virtual]
```

Implements [Digikam::DPlugin](#).

#### 9.432.1.5 exportWidget()

```
virtual DImgLoaderSettings * Digikam::DPluginDImg::exportWidget (
    const QString & format ) const [pure virtual]
```

Return nullptr if format is not supported or if no settings widget is available for this format.

#### 9.432.1.6 extraAboutData()

```
QMap< QString, QStringList > Digikam::DPluginDImg::extraAboutData ( ) const [override], [virtual]
```

Reimplemented from [Digikam::DPlugin](#).

#### 9.432.1.7 extraAboutDataRowTitles()

```
QStringList Digikam::DPluginDImg::extraAboutDataRowTitles ( ) const [override], [virtual]
```

Reimplemented from [Digikam::DPlugin](#).

#### 9.432.1.8 extraAboutDataTitle()

```
QString Digikam::DPluginDImg::extraAboutDataTitle ( ) const [override], [virtual]
```

Reimplemented from [Digikam::DPlugin](#).

#### 9.432.1.9 hasVisibilityProperty()

```
bool Digikam::DPluginDImg::hasVisibilityProperty ( ) const [inline], [override], [virtual]
```

Reimplemented from [Digikam::DPlugin](#).

#### 9.432.1.10 ifaceId()

```
QString Digikam::DPluginDImg::ifaceId ( ) const [inline], [override], [virtual]
```

Implements [Digikam::DPlugin](#).

### 9.432.1.11 loaderName()

```
virtual QString Digikam::DPluginDImg::loaderName ( ) const [pure virtual]
```

Ex: jpeg => "JPG" ; tiff => "TIF", etc.

### 9.432.1.12 setVisible()

```
void Digikam::DPluginDImg::setVisible (
    bool ) [inline], [override], [virtual]
```

Implements [Digikam::DPlugin](#).

### 9.432.1.13 typeMimes()

```
virtual QString Digikam::DPluginDImg::typeMimes ( ) const [pure virtual]
```

Ex: "jpeg jpg thm"

## 9.433 Digikam::DPluginEditor Class Reference

Inheritance diagram for Digikam::DPluginEditor:

### Public Member Functions

- **DPluginEditor** (`QObject *const parent=nullptr`)  
*Constructor with optional parent object.*

- `~DPluginEditor ()` override  
*Destructor.*
- `QList< DPluginAction * > actions (QObject *const parent) const`  
*Return all plugin actions registered in `setup()` method with `addAction()` for a given parent.*
- `QStringList categories ()` const override  
*Return a list of categories as strings registered in this plugin.*
- `int count ()` const override  
*Return the amount of tools registered to all parents.*
- `DPluginAction * findActionByName (const QString &name, QObject *const parent) const`  
*Return a plugin action instance found by name in plugin action list for a given parent.*
- `QString ifacelid ()` const override  
*Return the plugin interface identifier.*
- `void setVisible (bool b)` override  
*Holds whether the plugin can be seen in parent view.*

## Public Member Functions inherited from Digikam::DPlugin

- `DPlugin (QObject *const parent=nullptr)`  
*Constructor with optional parent object.*
- `~DPlugin ()` override  
*Destructor.*
- `virtual QList< DPluginAuthor > authors () const =0`  
*Returns authors list for the plugin.*
- `virtual void cleanUp ()`  
*Plugin method to clean up internal created objects.*
- `virtual QString description () const =0`  
*Returns a short description about the plugin.*
- `virtual QString details () const =0`  
*Returns a long description about the plugin.*
- `virtual QMap< QString, QStringList > extraAboutData () const`  
*Returns a map of extra data to show in plugin about dialog.*
- `virtual QStringList extraAboutDataRowTitles () const`  
*Returns a list of extra data row titles to show in tab of plugin about dialog.*
- `virtual QString extraAboutDataTitle () const`  
*Returns the tab title of data returned by `extraAboutData()`.*
- `virtual QString handbookChapter () const`  
*Return the online handbook chapter from an handbook section corresponding to this plugin.*
- `virtual QString handbookReference () const`  
*Return the online handbook reference from an handbook chapter corresponding to this plugin.*
- `virtual QString handbookSection () const`  
*Return the online handbook section corresponding to this plugin.*
- `virtual bool hasVisibilityProperty () const`  
*Return true if plugin can be configured in setup dialog about the visibility property.*
- `virtual QIcon icon () const`  
*Returns an icon for the plugin.*
- `virtual QString iid () const =0`  
*Returns the unique internal identification property of the plugin.*
- `QString libraryFileName () const`  
*Returns the file name of the library for this plugin.*
- `virtual QString name () const =0`

- Returns the user-visible name of the plugin.*
- QStringList **pluginAuthors** () const
  - Return a list of authors as strings registered in this plugin.*
- void **setLibraryFileName** (const QString &)
  - Sets the file name of the library for this plugin.*
- void **setShouldLoaded** (bool b)
  - Accessor to adjust the should loaded plugin property.*
- virtual void **setup** (QObject \*const parent)=0
  - Plugin factory method to create all internal object instances for a given parent.*
- bool **shouldLoaded** () const
  - Return the should loaded property.*
- QString **version** () const
  - Return the internal version used to check the binary compatibility at run-time.*

### Protected Member Functions

- void **addAction** (DPluginAction \*const ac)
- **InfoInterface** \* **infoface** (QObject \*const ac) const
- Return the info interface instance for the given action.*

## 9.433.1 Member Function Documentation

### 9.433.1.1 categories()

```
QStringList Digikam::DPluginEditor::categories ( ) const [override], [virtual]
```

Implements [Digikam::DPlugin](#).

### 9.433.1.2 count()

```
int Digikam::DPluginEditor::count ( ) const [override], [virtual]
```

Implements [Digikam::DPlugin](#).

### 9.433.1.3 ifaceId()

```
QString Digikam::DPluginEditor::ifaceId ( ) const [inline], [override], [virtual]
```

Implements [Digikam::DPlugin](#).

### 9.433.1.4 setVisible()

```
void Digikam::DPluginEditor::setVisible (
    bool b ) [override], [virtual]
```

Implements [Digikam::DPlugin](#).

## 9.434 Digikam::DPluginGeneric Class Reference

Inheritance diagram for Digikam::DPluginGeneric:

### Public Member Functions

- **DPluginGeneric** (QObject \*const parent=nullptr)  
*Constructor with optional parent object.*

- `~DPluginGeneric ()` override  
*Destructor.*
- `QList< DPluginAction * > actions (QObject *const parent) const`  
*Return all plugin actions registered in `setup()` method with `addAction()` for a given parent.*
- `QStringList categories ()` const override  
*Return a list of categories as strings registered in this plugin.*
- `int count ()` const override  
*Return the amount of tools registered to all parents.*
- `DPluginAction * findActionByName (const QString &name, QObject *const parent) const`  
*Return a plugin action instance found by name in plugin action list for a given parent.*
- `QString ifacelid ()` const override  
*Return the plugin interface identifier.*
- `void setVisible (bool b)` override  
*Holds whether the plugin can be seen in parent view.*

## Public Member Functions inherited from `Digikam::DPlugin`

- `DPlugin (QObject *const parent=nullptr)`  
*Constructor with optional parent object.*
- `~DPlugin ()` override  
*Destructor.*
- `virtual QList< DPluginAuthor > authors () const =0`  
*Returns authors list for the plugin.*
- `virtual void cleanUp ()`  
*Plugin method to clean up internal created objects.*

```

Implements [Digikam::DPlugin](#).

## 9.435 Digikam::DPluginLoader Class Reference

The class that handles digiKam's external plugins.

Inheritance diagram for Digikam::DPluginLoader:

### Public Member Functions

- `QList< DPlugin * > allPlugins ()` const  
*Returns all available plugins.*
- void `appendPluginToBlackList (const QString &filename)`  
*appendPluginToBlackList Prevent that a plugin is loaded from the given filename*
- void `appendPluginToWhiteList (const QString &filename)`  
*appendPluginToWhiteList Add a plugin to the whitelist of tools.*
- bool `canExport (const QString &format)` const  
*Return true if format is supported by a [DPluginDImg](#) to export image.*
- bool `canImport (const QString &format)` const  
*Return true if format is supported by a [DPluginDImg](#) to import image.*
- void `cleanUp ()`  
*Unload all loaded plugins.*
- `QString configGroupName ()` const

- Return the config group name used to store the list of plugins to load at startup.*

  - [DImgLoaderSettings](#) \* [exportWidget](#) (const QString &format) const

*Return a new widget instance from a [DPluginDImg](#) to show settings while exporting image to specified format.*
- void [init](#) ()
  - Init plugin loader.*
- [DPluginAction](#) \* [pluginAction](#) (const QString &actionName, QObject \*const parent) const
  - Returns the plugin action corresponding to a action name for a given parent.*
- QList< [DPluginAction](#) \* > [pluginActions](#) (const QString &pluginIID, QObject \*const parent) const
  - Returns the plugin actions corresponding to a plugin internal ID string for a given parent.*
- QList< [DPluginAction](#) \* > [pluginsActions](#) ([DPluginAction::ActionCategory](#) cat, QObject \*const parent) const
  - Returns a list of plugin actions set as category for a given parent.*
- QList< [DPluginAction](#) \* > [pluginsActions](#) ([DPluginAction::ActionType](#) type, QObject \*const parent) const
  - Returns a list of plugin actions set as type for a given parent.*
- QString [pluginXmlSections](#) ([DPluginAction::ActionCategory](#) cat, QObject \*const parent) const
  - Returns all xml sections as string of plugin actions set with a kind of category for a given parent.*
- void [registerEditorPlugins](#) (QObject \*const parent)
  - Register all Editor plugin actions to parent object.*
- void [registerGenericPlugins](#) (QObject \*const parent)
  - Register all Generic plugin actions to parent object.*
- void [registerRawImportPlugins](#) (QObject \*const parent)
  - Register all Raw Import plugin to parent object.*

### Static Public Member Functions

- static [DPluginLoader](#) \* [instance](#) ()
  - instance: returns the singleton of plugin loader*

### Friends

- class [DPluginLoaderCreator](#)

## 9.435.1 Detailed Description

Ownership policy for plugins:

The [DPluginLoader](#) creates new objects and transfer ownership. In order to create the objects, the [DPluginLoader](#) internally has a list of the tools which are owned by the [DPluginLoader](#) and destroyed by it.

## 9.435.2 Member Function Documentation

### 9.435.2.1 [appendPluginToBlackList\(\)](#)

```
void Digikam::DPluginLoader::appendPluginToBlackList (
    const QString & filename )
```

## Parameters

<i>filename</i>	The name of the file excluding file extension to blacklist. E.g. to ignore "HtmlGalleryPlugin.so" on Linux and "HtmlGalleryPlugin.dll" on Windows, pass "HtmlGalleryPlugin"
-----------------	---

**9.435.2.2 appendPluginToWhiteList()**

```
void Digikam::DPluginLoader::appendPluginToWhiteList (
    const QString & filename )
```

If the whitelist is not empty, only whitelisted tools are loaded. If a tool is both whitelisted and blacklisted, it will not be loaded.

## Parameters

<i>filename</i>	The name of the file excluding file extension to whitelist. E.g. to not ignore "HtmlGalleryPlugin.so" on Linux and "HtmlGalleryPlugin.dll" on Windows, pass "HtmlGalleryPlugin"
-----------------	---

**9.435.2.3 cleanUp()**

```
void Digikam::DPluginLoader::cleanUp ( )
```

Call this method before the main instance is closed.

**9.435.2.4 exportWidget()**

```
DImgLoaderSettings * Digikam::DPluginLoader::exportWidget (
    const QString & format ) const
```

Return nullptr if format is not supported or if no settings widget is available for this format.

**9.435.2.5 init()**

```
void Digikam::DPluginLoader::init ( )
```

Call this method to parse and load relevant plugins installed on your system.

**9.435.2.6 instance()**

```
DPluginLoader * Digikam::DPluginLoader::instance ( ) [static]
```

## Returns

[DPluginLoader](#) global instance

### 9.435.2.7 pluginAction()

```
DPluginAction * Digikam::DPluginLoader::pluginAction (
    const QString & actionName,
    QObject *const parent ) const
```

If not found, this returns a null pointer.

### 9.435.2.8 pluginActions()

```
QList< DPluginAction * > Digikam::DPluginLoader::pluginActions (
    const QString & pluginIID,
    QObject *const parent ) const
```

If not found, this returns an empty list.

### 9.435.2.9 pluginsActions() [1/2]

```
QList< DPluginAction * > Digikam::DPluginLoader::pluginsActions (
    DPluginAction::ActionCategory cat,
    QObject *const parent ) const
```

If no plugin have found in this category, this returns an empty list.

### 9.435.2.10 pluginsActions() [2/2]

```
QList< DPluginAction * > Digikam::DPluginLoader::pluginsActions (
    DPluginAction::ActionType type,
    QObject *const parent ) const
```

If no plugin have found in this category, this returns an empty list.

## 9.436 Digikam::DPluginRawImport Class Reference

Inheritance diagram for Digikam::DPluginRawImport:

### Signals

- void **signalDecodedImage** (const [Digikam::LoadingDescription](#) &, const [Digikam::DImg](#) &)  
*Signal emitted to notify host application to load pre-decoded Raw preprocessed with these decoding settings.*
- void **signalLoadRaw** (const [Digikam::LoadingDescription](#) &)  
*Signal emitted to notify host application to load Raw with these decoding settings.*

## Public Member Functions

- **DPluginRawImport** (QObject \*const parent=nullptr)  
*Constructor with optional parent object.*
- **~DPluginRawImport** () override=default  
*Destructor.*
- QStringList **categories** () const override  
*This kind of plugin do not use a category.*
- int **count** () const override  
*This kind of plugin only provide one tool.*
- virtual QString **getRawProgram** () const  
*Return the path to the raw program, or empty if not found.*
- QString **ifaceId** () const override  
*Return the plugin interface identifier.*
- virtual bool **run** (const QString &path, const DRawDecoding &def)=0  
*Function to re-implement used to invoke Raw processor for a Raw file path and a Default Raw decoding settings.*
- void **setVisible** (bool) override  
*This kind of plugin do not have GUI visibility attribute.*

## Public Member Functions inherited from Digikam::DPlugin

- **DPlugin** (QObject \*const parent=nullptr)  
*Constructor with optional parent object.*
- **~DPlugin** () override  
*Destructor.*
- virtual QList< **DPluginAuthor** > **authors** () const =0  
*Returns authors list for the plugin.*
- virtual void **cleanUp** ()  
*Plugin method to clean up internal created objects.*
- virtual QString **description** () const =0  
*Returns a short description about the plugin.*
- virtual QString **details** () const =0  
*Returns a long description about the plugin.*
- virtual QMap< QString, QStringList > **extraAboutData** () const  
*Returns a map of extra data to show in plugin about dialog.*
- virtual QStringList **extraAboutDataRowTitles** () const  
*Returns a list of extra data row titles to show in tab of plugin about dialog.*
- virtual QString **extraAboutDataTitle** () const  
*Returns the tab title of data returned by [extraAboutData\(\)](#).*
- virtual QString **handbookChapter** () const  
*Return the online handbook chapter from an handbook section corresponding to this plugin.*
- virtual QString **handbookReference** () const  
*Return the online handbook reference from an handbook chapter corresponding to this plugin.*
- virtual QString **handbookSection** () const  
*Return the online handbook section corresponding to this plugin.*
- virtual bool **hasVisibilityProperty** () const  
*Return true if plugin can be configured in setup dialog about the visibility property.*
- virtual QIcon **icon** () const  
*Returns an icon for the plugin.*
- virtual QString **iid** () const =0

- Returns the unique internal identification property of the plugin.*

  - QString [libraryFileName](#) () const
    - Returns the file name of the library for this plugin.*
  - virtual QString [name](#) () const =0
    - Returns the user-visible name of the plugin.*
  - QStringList [pluginAuthors](#) () const
    - Return a list of authors as strings registered in this plugin.*
  - void [setLibraryFileName](#) (const QString &)
    - Sets the file name of the library for this plugin.*
  - void [setShouldLoaded](#) (bool b)
    - Accessor to adjust the should loaded plugin property.*
  - virtual void [setup](#) (QObject \*const parent)=0
    - Plugin factory method to create all internal object instances for a given parent.*
  - bool [shouldLoaded](#) () const
    - Return the should loaded property.*
  - QString [version](#) () const
    - Return the internal version used to check the binary compatibility at run-time.*

## 9.436.1 Member Function Documentation

### 9.436.1.1 categories()

```
QStringList Digikam::DPluginRawImport::categories ( ) const [inline], [override], [virtual]
```

Implements [Digikam::DPlugin](#).

### 9.436.1.2 count()

```
int Digikam::DPluginRawImport::count ( ) const [inline], [override], [virtual]
```

Implements [Digikam::DPlugin](#).

### 9.436.1.3 ifaceId()

```
QString Digikam::DPluginRawImport::ifaceId ( ) const [inline], [override], [virtual]
```

Implements [Digikam::DPlugin](#).

### 9.436.1.4 setVisible()

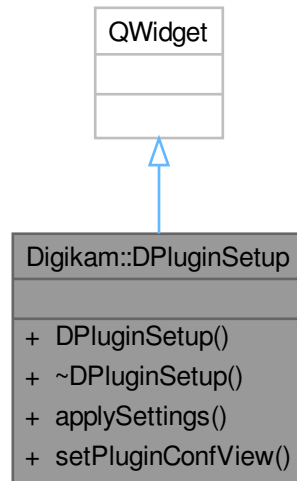

```
void Digikam::DPluginRawImport::setVisible (
    bool ) [inline], [override], [virtual]
```

Implements [Digikam::DPlugin](#).

## 9.437 Digikam::DPluginSetup Class Reference

Inheritance diagram for Digikam::DPluginSetup:

### Public Member Functions

- **DPluginSetup** (`QWidget *const parent=nullptr`)
- void **applySettings** ()
- void **setPluginConfView** ([DPluginConfView](#) \*const view)

## 9.438 Digikam::DPointSelect Class Reference

Inheritance diagram for Digikam::DPointSelect:

### Signals

- void `valueChanged` (int x, int y)

*This signal is emitted whenever the user chooses a value, e.g.*

## Public Member Functions

- **DPointSelect** (QWidget \*const parent)  
*Constructs a two-dimensional selector widget which has a value range of [0..100] in both directions.*
- QRect **contentsRect** () const
- QSize **minimumSizeHint** () const override  
*Reimplemented to give the widget a minimum size.*
- void **setMarkerColor** (const QColor &col)  
*Sets the color used to draw the marker.*
- void **setRange** (int minX, int minY, int maxX, int maxY)  
*Sets the range of possible values.*
- void **setValues** (int xPos, int yPos)  
*Sets the current values in horizontal and vertical direction.*
- void **setXValue** (int xPos)  
*Sets the current horizontal value.*
- void **setYValue** (int yPos)  
*Sets the current vertical value.*
- int **xValue** () const
- int **yValue** () const

## Protected Member Functions

- virtual void **drawContents** (QPainter \*)  
*Override this function to draw the contents of the widget.*
- virtual void **drawMarker** (QPainter \*p, int xp, int yp)  
*Override this function to draw the marker which indicates the currently selected value pair.*
- void **mouseMoveEvent** (QMouseEvent \*e) override
- void **mousePressEvent** (QMouseEvent \*e) override
- void **paintEvent** (QPaintEvent \*e) override
- void **valuesFromPosition** (int x, int y, int &xVal, int &yVal) const  
*Converts a pixel position to its corresponding values.*
- void **wheelEvent** (QWheelEvent \*) override

## Properties

- int **xValue**
- int **yValue**

## Friends

- class **Private**

## 9.438.1 Member Function Documentation

### 9.438.1.1 contentsRect()

QRect Digikam::DPointSelect::contentsRect ( ) const

#### Returns

the rectangle on which subclasses should draw.

### 9.438.1.2 drawContents()

```
virtual void Digikam::DPointSelect::drawContents (
    QPainter * ) [inline], [protected], [virtual]
```

The default implementation does nothing.

Draw within [contentsRect\(\)](#) only.

Reimplemented in [Digikam::DHueSaturationSelector](#).

### 9.438.1.3 setMarkerColor()

```
void Digikam::DPointSelect::setMarkerColor (
    const QColor & col )
```

#### Parameters

<i>col</i>	the color
------------	-----------

### 9.438.1.4 setValues()

```
void Digikam::DPointSelect::setValues (
    int xPos,
    int yPos )
```

#### Parameters

<i>xPos</i>	the horizontal value
<i>yPos</i>	the vertical value

### 9.438.1.5 setXValue()

```
void Digikam::DPointSelect::setXValue (
    int xPos )
```

#### Parameters

<i>xPos</i>	the horizontal value
-------------	----------------------

### 9.438.1.6 setYValue()

```
void Digikam::DPointSelect::setYValue (
    int yPos )
```

**Parameters**

<i>yPos</i>	the vertical value
-------------	--------------------

**9.438.1.7 valueChanged**

```
void Digikam::DPointSelect::valueChanged (
    int x,
    int y ) [signal]
```

by clicking with the mouse on the widget.

**9.438.1.8 xValue()**

```
int Digikam::DPointSelect::xValue ( ) const
```

**Returns**

the current value in horizontal direction.

**9.438.1.9 yValue()**

```
int Digikam::DPointSelect::yValue ( ) const
```

**Returns**

the current value in vertical direction.

## 9.439 Digikam::DPopupFrame Class Reference

Inheritance diagram for Digikam::DPopupFrame:

**Public Slots**

- void `close` (int r)  
*Close the popup window.*

**Signals**

- void `leaveModality` ()

## Public Member Functions

- [DPopupFrame](#) (QWidget \*const parent=nullptr)  
*The constructor.*
- [~DPopupFrame](#) () override  
*The destructor.*

## 9.439.1 Constructor & Destructor Documentation

### 9.439.1.1 DPopupFrame()

```
Digikam::DPopupFrame::DPopupFrame (  
    QWidget *const parent = nullptr ) [explicit]
```

Creates a dialog without buttons.

## 9.439.2 Member Function Documentation

### 9.439.2.1 close

```
void Digikam::DPopupFrame::close (  
    int r ) [slot]
```

This is called from the main widget, usually. `r` is the result returned from [exec\(\)](#).

### 9.439.2.2 `resizeEvent()`

```
void Digikam::DPopupFrame::resizeEvent (
    QResizeEvent * e ) [override]
```

Simply resizes the main widget to the whole widgets client size.

### 9.439.2.3 `setMainWidget()`

```
void Digikam::DPopupFrame::setMainWidget (
    QWidget *const m )
```

You cannot set the main widget from the constructor, since it must be a child of the frame itself. Be careful: the size is set to the main widgets size. It is up to you to set the main widgets correct size before setting it as the main widget.

## 9.440 Digikam::DPreviewImage Class Reference

Inheritance diagram for Digikam::DPreviewImage:

### Public Slots

- void **slotClearActiveSelection** ()
- void **slotClearHighlight** ()

*This function removes the highlight area.*

- void **slotSetHighlightArea** (float tl\_x, float tl\_y, float br\_x, float br\_y)

*This function is used to darken everything except what is inside the given area.*

- void **slotSetHighlightShown** (int percentage, const QColor &highlightColor=Qt::white)

*This function sets the percentage of the highlighted area that is visible.*

- void **slotSetSelection** (float tl\_x, float tl\_y, float br\_x, float br\_y)

*This function is used to set a selection without the user setting it.*

- void **slotZoom2Fit** ()
- void **slotZoomIn** ()
- void **slotZoomOut** ()

- void **slotSetTLX** (float ratio)

*Selection area specific slots (TL = TopLeft, BR = BottomRight)*

- void **slotSetTLY** (float ratio)
- void **slotSetBRX** (float ratio)
- void **slotSetBRY** (float ratio)

## Public Member Functions

- **DPreviewImage** (QWidget \*const parent)
- void **enableSelectionArea** (bool b)
- QRectF **getSelectionArea** () const
- bool **load** (const QUrl &file) const
- bool **setImage** (const QImage &img) const
- void **setSelectionArea** (const QRectF &rectangle)

*Sets a selection area and show it.*

## Protected Member Functions

- void **updateSelVisibility** ()
- void **wheelEvent** (QWheelEvent \*) override

## 9.440.1 Member Function Documentation

### 9.440.1.1 setSelectionArea()

```
void Digikam::DPreviewImage::setSelectionArea (
    const QRectF & rectangle )
```

## Parameters

<i>rectangle</i>	This rectangle should have height and width of 1.0
------------------	--

## 9.440.1.2 slotSetHighlightArea

```
void Digikam::DPreviewImage::slotSetHighlightArea (
    float tl_x,
    float tl_y,
    float br_x,
    float br_y ) [slot]
```

## Note

all parameters must be in the range 0.0 -> 1.0.

## Parameters

<i>tl</i> <sub>↔</sub> <i>_x</i>	is the x coordinate of the top left corner 0=0 1=image with.
<i>tl</i> <sub>↔</sub> <i>_y</i>	is the y coordinate of the top left corner 0=0 1=image height.
<i>br</i> <sub>↔</sub> <i>_x</i>	is the x coordinate of the bottom right corner 0=0 1=image with.
<i>br</i> <sub>↔</sub> <i>_y</i>	is the y coordinate of the bottom right corner 0=0 1=image height.

## 9.440.1.3 slotSetHighlightShown

```
void Digikam::DPreviewImage::slotSetHighlightShown (
    int percentage,
    const QColor & highlightColor = Qt::white ) [slot]
```

The rest is hidden. This stacks with the previous highlight area.

## Parameters

<i>percentage</i>	is the percentage of the highlighted area that is shown.
<i>highlightColor</i>	is the color to use to hide the highlighted area of the image.

## 9.440.1.4 slotSetSelection

```
void Digikam::DPreviewImage::slotSetSelection (
    float tl_x,
    float tl_y,
    float br_x,
    float br_y ) [slot]
```

**Note**

all parameters must be in the range 0.0 -> 1.0.

**Parameters**

<i>tl</i> ↔ _x	is the x coordinate of the top left corner 0=0 1=image with.
<i>tl</i> ↔ _y	is the y coordinate of the top left corner 0=0 1=image height.
<i>br</i> ↔ _x	is the x coordinate of the bottom right corner 0=0 1=image with.
<i>br</i> ↔ _y	is the y coordinate of the bottom right corner 0=0 1=image height.

**9.441 Digikam::DPreviewManager Class Reference**

Inheritance diagram for Digikam::DPreviewManager:

## Public Types

- void **setThumbnail** (const QPixmap &preview=QPixmap())
  
- void **setSelectionArea** (const QRectF &rectangle)  
*Manage a selection area and show it.*
- QRectF **getSelectionArea** () const

## 9.441.1 Member Function Documentation

### 9.441.1.1 setSelectionArea()

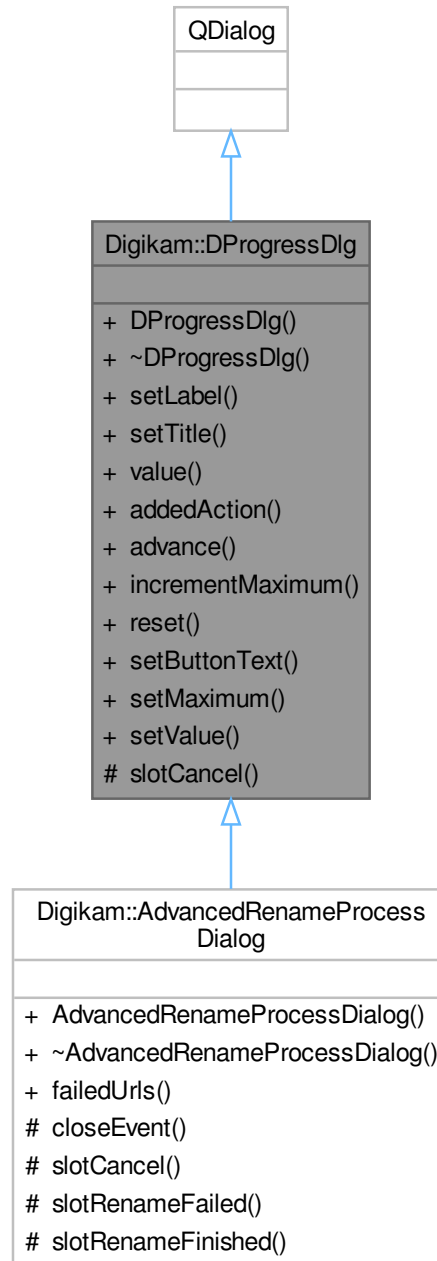

```
void Digikam::DPreviewManager::setSelectionArea (  
    const QRectF & rectangle )
```

#### Parameters

<i>rectangle</i>	This rectangle should have height and width of 1.0
------------------	--

## 9.442 Digikam::DProgressDlg Class Reference

Inheritance diagram for Digikam::DProgressDlg:

### Public Slots

- void **addedAction** (const QPixmap &icon, const QString &text)
- void **advance** (int offset)

- void **incrementMaximum** (int added)
- void **reset** ()
- void **setButtonText** (const QString &text)
- void **setMaximum** (int max)
- void **setValue** (int value)

### Signals

- void **signalCancelPressed** ()

### Public Member Functions

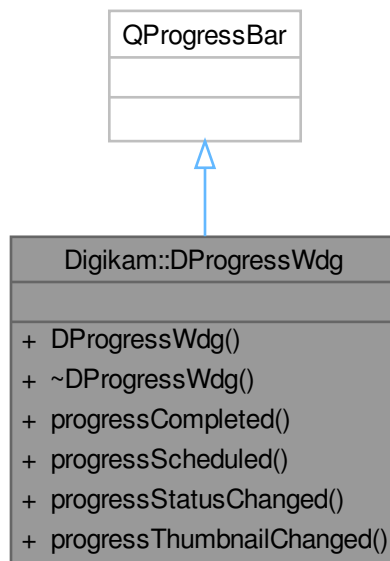

- **DProgressDlg** (QWidget \*const parent=nullptr, const QString &caption=QString())
- void **setLabel** (const QString &text)
- void **setTitle** (const QString &text)
- int **value** () const

### Protected Slots

- void **slotCancel** ()

## 9.443 Digikam::DProgressWdg Class Reference

Inheritance diagram for Digikam::DProgressWdg:

## Signals

- void **signalProgressCanceled** ()  
*Fired when user press cancel button from progress manager.*

## Public Member Functions

- **DProgressWdg** (QWidget \*const parent)
- void **progressCompleted** ()  
*Call this method to query progress manager that process is done.*
- void **progressScheduled** (const QString &title, bool canBeCanceled, bool hasThumb)  
*Call this method to start a new instance of progress notification into progress manager You can pass title string to name progress item, and set it as cancelable.*
- void **progressStatusChanged** (const QString &status)  
*Change status string in progress manager.*
- void **progressThumbnailChanged** (const QPixmap &thumb)  
*Change thumbnail in progress manager.*

## 9.443.1 Member Function Documentation

### 9.443.1.1 progressScheduled()

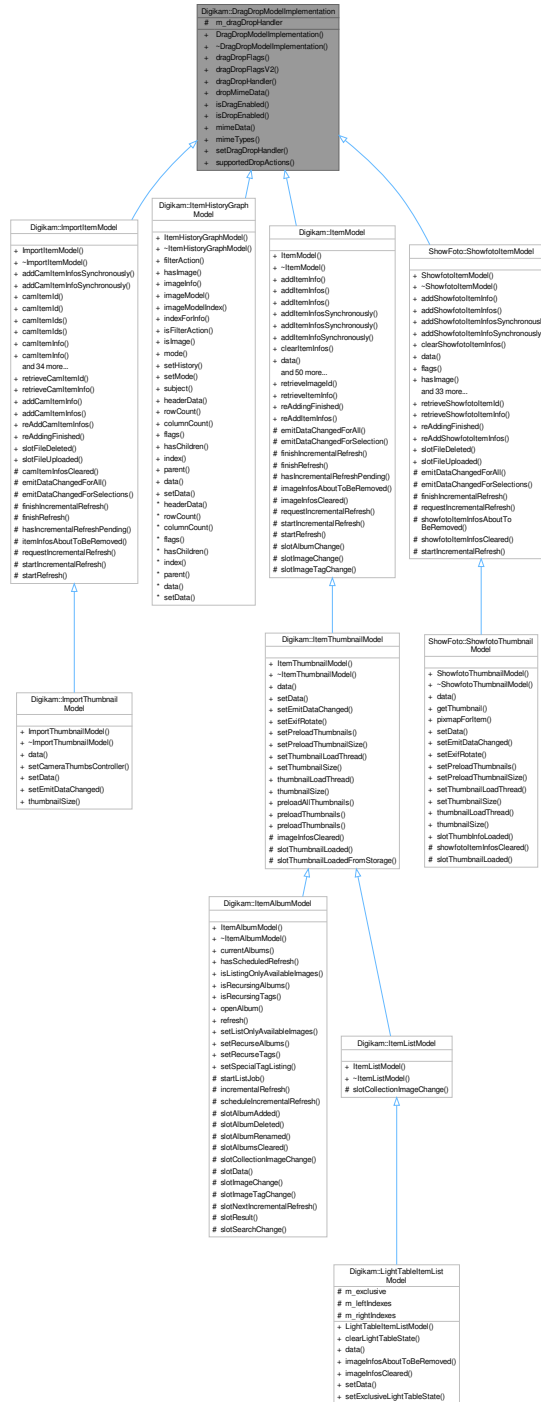

```
void DigiKam::DProgressWdg::progressScheduled (
    const QString & title,
    bool canBeCanceled,
    bool hasThumb )
```

In this case, [signalProgressCanceled\(\)](#) is fired when user press cancel button from progress manager. This item can also accept a thumbnail that you can change through [progressThumbnailChanged\(\)](#).

# 9.444 Digikam::DragDropModelImplementation Class Reference

Inheritance diagram for Digikam::DragDropModelImplementation:

## Public Member Functions

- [DragDropModelImplementation\(\)](#) = default

A class providing a sample implementation for a QAbstractItemModel redirecting drag-and-drop support to a handler.

- virtual Qt::ItemFlags [dragDropFlags](#) (const QModelIndex &index) const  
*Call from your flags() method, adding the relevant drag drop flags.*
- Qt::ItemFlags [dragDropFlagsV2](#) (const QModelIndex &index) const  
*This is an alternative approach to [dragDropFlags\(\)](#).*
- [AbstractItemDragDropHandler](#) \* **dragDropHandler** () const
- bool **dropMimeData** (const QMimeData \*, Qt::DropAction, int, int, const QModelIndex &)
- virtual bool **isDragEnabled** (const QModelIndex &index) const
- virtual bool **isDropEnabled** (const QModelIndex &index) const
- QMimeData \* **mimeData** (const QModelIndexList &indexes) const
- QStringList **mimeTypes** () const
- void **setDragDropHandler** ([AbstractItemDragDropHandler](#) \*handler)  
*Set a drag drop handler.*
- Qt::DropActions [supportedDropActions](#) () const  
*Implements the relevant QAbstractItemModel methods for drag and drop.*

### Protected Attributes

- [AbstractItemDragDropHandler](#) \* **m\_dragDropHandler** = nullptr

## 9.444.1 Constructor & Destructor Documentation

### 9.444.1.1 DragDropModelImplementation()

```
Digikam::DragDropModelImplementation::DragDropModelImplementation ( ) [default]
```

Include the macro `DECLARE_Model_DRAG_DROP_METHODS` in your derived `QAbstractItemModel` class.

## 9.444.2 Member Function Documentation

### 9.444.2.1 dragDropFlags()

```
Qt::ItemFlags Digikam::DragDropModelImplementation::dragDropFlags (
    const QModelIndex & index ) const [virtual]
```

Default implementation enables both drag and drop on the index if a drag drop handler is set. Reimplement to fine-tune. Note: There is an alternative below.

### 9.444.2.2 dragDropFlagsV2()

```
Qt::ItemFlags Digikam::DragDropModelImplementation::dragDropFlagsV2 (
    const QModelIndex & index ) const
```

`dragDropFlagsV2` calls the virtual methods `isDragEnabled()` and `isDropEnabled()` which you then reimplement. Use simple [dragDropFlags\(\)](#) if you need not customization, or reimplement [dragDropFlags\(\)](#) if you fine-tune it yourself.

## Public Member Functions

- virtual void **copy** ()
- virtual void **cut** ()
- virtual void **paste** ()

## Protected Member Functions

- virtual QAbstractItemView \* **asView** ()=0  
*This one is implemented by DECLARE\_VIEW\_DRAG\_DROP\_METHODS.*
- bool **decodelsCutSelection** (const QMimeData \*mimeData)
- virtual [AbstractItemDragDropHandler](#) \* **dragDropHandler** () const =0  
*You need to implement these three methods Returns the drag drop handler.*
- void **dragEnterEvent** (QDragEnterEvent \*event)  
*Implements the relevant QAbstractItemView methods for drag and drop.*
- void **dragMoveEvent** (QDragMoveEvent \*e)
- void **dropEvent** (QDropEvent \*e)
- void **encodelsCutSelection** (QMimeData \*mime, bool isCutSelection)
- virtual QModelIndex **mapIndexForDragDrop** (const QModelIndex &index) const =0  
*Maps the given index of the view's model to an index of the handler's model, which can be a source model of the view's model.*
- virtual QPixmap **pixmapForDrag** (const QList< QModelIndex > &indexes) const =0  
*Creates a pixmap for dragging the given indexes.*
- void **startDrag** (Qt::DropActions supportedActions)

## 9.445.1 Member Function Documentation

### 9.445.1.1 dragDropHandler()

```
virtual AbstractItemDragDropHandler * Digikam::DragDropViewImplementation::dragDropHandler ( )
const [protected], [pure virtual]
```

Implemented in [Digikam::ItemCategorizedView](#), [Digikam::TableViewTreeView](#), [Digikam::VersionsTreeView](#), [ShowFoto::ShowfotoCategorizedView](#), and [Digikam::ImportCategorizedView](#).

### 9.445.1.2 mapIndexForDragDrop()

```
virtual QModelIndex Digikam::DragDropViewImplementation::mapIndexForDragDrop (
    const QModelIndex & index ) const [protected], [pure virtual]
```

Implemented in [Digikam::TableViewTreeView](#), [Digikam::VersionsTreeView](#), and [Digikam::ItemViewCategorized](#).

### 9.445.1.3 pixmapForDrag()

```
virtual QPixmap Digikam::DragDropViewImplementation::pixmapForDrag (
    const QList< QModelIndex > & indexes ) const [protected], [pure virtual]
```

Implemented in [Digikam::TableViewTreeView](#), [Digikam::VersionsTreeView](#), and [Digikam::ItemViewCategorized](#).

## 9.446 Digikam::DragHandle Class Reference

An alternative handle for QDockWidget's that looks like a toolbar handle.

Inheritance diagram for Digikam::DragHandle:

### Public Member Functions

- **DragHandle** (QDockWidget \*const)
- QSize **minimumSizeHint** () const override
- QSize **sizeHint** () const override

### Protected Member Functions

- void **paintEvent** (QPaintEvent \*) override

## 9.447 Digikam::DRawDecoder Class Reference

Inheritance diagram for Digikam::DRawDecoder:

### Public Member Functions

- **DRawDecoder ()**  
*Standard constructor.*
- **~DRawDecoder ()** override  
*Standard destructor.*
- void **cancel ()**  
*To cancel 'decodeHalfRAWImage' and 'decodeRAWImage' methods running in a separate thread.*

- bool [decodeHalfRAWImage](#) (const QString &filePath, const [DRawDecoderSettings](#) &[DRawDecoderSettings](#), QByteArray &imageData, int &width, int &height, int &rgbmax)  
*Extract a small size of decode RAW data from 'filePath' picture file using 'DRawDecoderSettings' settings.*
- bool [decodeRAWImage](#) (const QString &filePath, const [DRawDecoderSettings](#) &[DRawDecoderSettings](#), QByteArray &imageData, int &width, int &height, int &rgbmax)  
*Extract a full size of RAW data from 'filePath' picture file using 'DRawDecoderSettings' settings.*
- bool [extractRAWData](#) (const QString &filePath, QByteArray &rawData, [DRawInfo](#) &identify, unsigned int shotSelect=0)  
*Extract Raw image data undemosaiced and without post processing from 'filePath' picture file.*

### Static Public Member Functions

- static bool [isRawFile](#) (const QUrl &url)
- static int [librawUseGomp](#) ()  
*Return true or false if LibRaw use parallel demosaicing or not (libgomp support).*
- static QString [librawVersion](#) ()  
*Return LibRaw version string.*
- static bool [loadEmbeddedPreview](#) (QByteArray &imgData, const QBuffer &inBuffer)  
*Get the embedded JPEG preview image from RAW image passed in QBuffer as a QByteArray which will include Exif Data.*
- static bool [loadEmbeddedPreview](#) (QByteArray &imgData, const QString &path)  
*Get the embedded JPEG preview image from RAW picture as a QByteArray which will include Exif Data.*
- static bool [loadEmbeddedPreview](#) (QImage &image, const QString &path)  
*Get the embedded JPEG preview image from RAW picture as a QImage.*
- static bool [loadFullImage](#) (QImage &image, const QString &path, const [DRawDecoderSettings](#) &settings=[DRawDecoderSettings](#)())  
*Get the full decoded RAW picture.*
- static bool [loadHalfPreview](#) (QByteArray &imgData, const QBuffer &inBuffer)  
*Get the half decoded RAW picture passed in QBuffer as JPEG data in QByteArray.*
- static bool [loadHalfPreview](#) (QByteArray &imgData, const QString &path)  
*Get the half decoded RAW picture as JPEG data in QByteArray.*
- static bool [loadHalfPreview](#) (QImage &image, const QString &path, bool rotate=true)  
*Get the half decoded RAW picture.*
- static bool [loadRawPreview](#) (QByteArray &imgData, const QBuffer &inBuffer)  
*Get the preview of RAW picture passed in QBuffer as a QByteArray holding JPEG data.*
- static bool [loadRawPreview](#) (QByteArray &imgData, const QString &path)  
*Get the preview of RAW picture as a QByteArray holding JPEG data.*
- static bool [loadRawPreview](#) (QImage &image, const QString &path)  
*Get the preview of RAW picture as a QImage.*
- static bool [rawFileIdentify](#) ([DRawInfo](#) &identify, const QString &path)  
*Get the camera settings which have taken RAW file.*
- static QString [rawFiles](#) ()  
*Return the string of all RAW file type mime supported.*
- static QStringList [rawFilesList](#) ()  
*Return the list of all RAW file type mime supported, as a QStringList, without wildcard and suffix dot.*
- static int [rawFilesVersion](#) ()  
*Returns a version number for the list of supported RAW file types.*
- static QStringList [supportedCamera](#) ()  
*Provide a list of supported RAW Camera name.*

## Protected Member Functions

- virtual bool [checkToCancelWaitingData](#) ()  
*Re-implement this method to control the cancelisation of loop which wait data from RAW decoding process with your proper environment.*
- virtual void [setWaitingDataProgress](#) (double value)  
*Re-implement this method to control the pseudo progress value during RAW decoding (when ddraw run with an internal loop without feedback) with your proper environment.*

## Protected Attributes

- bool [m\\_cancel](#) = false  
*Used internally to cancel RAW decoding operation.*
- [DRawDecoderSettings m\\_decoderSettings](#)  
*The settings container used to perform RAW pictures decoding.*

## Friends

- class **Private**

## 9.447.1 Member Function Documentation

### 9.447.1.1 checkToCancelWaitingData()

```
bool Digikam::DRawDecoder::checkToCancelWaitingData ( ) [protected], [virtual]
```

By default, this method check if `m_cancel` is true.

### 9.447.1.2 decodeHalfRAWImage()

```
bool Digikam::DRawDecoder::decodeHalfRAWImage (
    const QString & filePath,
    const DRawDecoderSettings & DRawDecoderSettings,
    QByteArray & imageData,
    int & width,
    int & height,
    int & rgbmax )
```

This is a cancelable method which require a class instance to run because RAW pictures decoding can take a while.

This method return:

- A byte array container 'imageData' with picture data. Pixels order is RGB. Color depth can be 8 or 16. In 8 bits you can access to color component using (uchar\*), in 16 bits using (ushort\*).
- Size size of image in number of pixels ('width' and 'height').
- The max average of RGB components from decoded picture.
- 'false' is returned if decoding failed, else 'true'.

### 9.447.1.3 decodeRAWImage()

```
bool Digikam::DRawDecoder::decodeRAWImage (
    const QString & filePath,
    const DRawDecoderSettings & DRawDecoderSettings,
    QByteArray & imageData,
    int & width,
    int & height,
    int & rgbmax )
```

This is a cancelable method which require a class instance to run because RAW pictures decoding can take a while.

This method return:

- A byte array container 'imageData' with picture data. Pixels order is RGB. Color depth can be 8 or 16. In 8 bits you can access to color component using (uchar\*), in 16 bits using (ushort\*).
- Size size of image in number of pixels ('width' and 'height').
- The max average of RGB components from decoded picture.
- 'false' is returned if decoding failed, else 'true'.

### 9.447.1.4 extractRAWData()

```
bool Digikam::DRawDecoder::extractRAWData (
    const QString & filePath,
    QByteArray & rawData,
    DRawInfo & identify,
    unsigned int shotSelect = 0 )
```

This is a cancelable method which require a class instance to run because RAW pictures loading can take a while.

This method return:

- A byte array container 'rawData' with raw data.
- All info about Raw image into 'identify' container.
- 'false' is returned if loading failed, else 'true'.

### 9.447.1.5 librawUseGomp()

```
int Digikam::DRawDecoder::librawUseGomp ( ) [static]
```

Return -1 if undefined.

### 9.447.1.6 loadEmbeddedPreview() [1/3]

```
bool Digikam::DRawDecoder::loadEmbeddedPreview (
    QByteArray & imgData,
    const QBuffer & inBuffer ) [static]
```

This is fast and non cancelable. This method does not require a class instance to run.

#### 9.447.1.7 loadEmbeddedPreview() [2/3]

```
bool Digikam::DRawDecoder::loadEmbeddedPreview (
    QByteArray & imgData,
    const QString & path ) [static]
```

This is fast and non cancelable. This method does not require a class instance to run.

#### 9.447.1.8 loadEmbeddedPreview() [3/3]

```
bool Digikam::DRawDecoder::loadEmbeddedPreview (
    QImage & image,
    const QString & path ) [static]
```

This is fast and non cancelable This method does not require a class instance to run.

#### 9.447.1.9 loadFullImage()

```
bool Digikam::DRawDecoder::loadFullImage (
    QImage & image,
    const QString & path,
    const DRawDecoderSettings & settings = DRawDecoderSettings() ) [static]
```

This is a more slower than [loadHalfPreview\(\)](#) method and non cancelable. This method does not require a class instance to run.

#### 9.447.1.10 loadHalfPreview() [1/3]

```
bool Digikam::DRawDecoder::loadHalfPreview (
    QByteArray & imgData,
    const QBuffer & inBuffer ) [static]
```

This is slower than [loadEmbeddedPreview\(\)](#) method and non cancelable. This method does not require a class instance to run.

#### 9.447.1.11 loadHalfPreview() [2/3]

```
bool Digikam::DRawDecoder::loadHalfPreview (
    QByteArray & imgData,
    const QString & path ) [static]
```

This is slower than [loadEmbeddedPreview\(\)](#) method and non cancelable. This method does not require a class instance to run.

#### 9.447.1.12 loadHalfPreview() [3/3]

```
bool Digikam::DRawDecoder::loadHalfPreview (
    QImage & image,
    const QString & path,
    bool rotate = true ) [static]
```

This is slower than [loadEmbeddedPreview\(\)](#) method and non cancelable. This method does not require a class instance to run.

**9.447.1.13 loadRawPreview()** [1/3]

```
static bool Digikam::DRawDecoder::loadRawPreview (
    QByteArray & imgData,
    const QBuffer & inBuffer ) [static]
```

It tries [loadEmbeddedPreview\(\)](#) first and if it fails, calls [loadHalfPreview\(\)](#).

**9.447.1.14 loadRawPreview()** [2/3]

```
static bool Digikam::DRawDecoder::loadRawPreview (
    QByteArray & imgData,
    const QString & path ) [static]
```

It tries [loadEmbeddedPreview\(\)](#) first and if it fails, calls [loadHalfPreview\(\)](#).

**9.447.1.15 loadRawPreview()** [3/3]

```
bool Digikam::DRawDecoder::loadRawPreview (
    QImage & image,
    const QString & path ) [static]
```

It tries [loadEmbeddedPreview\(\)](#) first and if it fails, calls [loadHalfPreview\(\)](#).

**9.447.1.16 rawFileIdentify()**

```
bool Digikam::DRawDecoder::rawFileIdentify (
    DRawInfo & identify,
    const QString & path ) [static]
```

Look into `rawinfo.h` for more details. This is a fast and non cancelable method which do not require a class instance to run.

**9.447.1.17 rawFilesVersion()**

```
int Digikam::DRawDecoder::rawFilesVersion ( ) [static]
```

This version is incremented if the list of supported formats has changed between library releases.

**9.447.1.18 setWaitingDataProgress()**

```
void Digikam::DRawDecoder::setWaitingDataProgress (
    double value ) [protected], [virtual]
```

By default, this method does nothing. Progress value average for this stage is 0%-n%, with 'n' == 40% max (see [setWaitingDataProgress\(\)](#) method).

## 9.447.2 Member Data Documentation

### 9.447.2.1 m\_cancel

```
bool Digikam::DRawDecoder::m_cancel = false [protected]
```

Normally, you don't need to use it directly, excepted if you derivated this class. Usual way is to use [cancel\(\)](#) method

### 9.447.2.2 m\_decoderSettings

```
DRawDecoderSettings Digikam::DRawDecoder::m_decoderSettings [protected]
```

See 'drawdecodingsetting.h' for details.

## 9.448 Digikam::DRawDecoderSettings Class Reference

### Public Types

- enum [DecodingQuality](#) {  
**BILINEAR** = 0 , **VNG** = 1 , **PPG** = 2 , **AHD** = 3 ,  
**DCB** = 4 , **DHT** = 11 , **AAHD** = 12 }  
*RAW decoding Interpolation methods.*
- enum [InputColorSpace](#) { **NOINPUTCS** = 0 , **EMBEDDED** , **CUSTOMINPUTCS** }  
*Input color profile used to decoded image NOINPUTCS: No input color profile.*
- enum [NoiseReduction](#) { **NONR** = 0 , **WAVELETSNR** , **FBDDNR** }  
*Noise Reduction method to apply before demosaicing NONR: No noise reduction.*
- enum [OutputColorSpace](#) {  
**RAWCOLOR** = 0 , **SRGB** , **ADOBERGB** , **WIDEGAMMUT** ,  
**PROPHOTO** , **CUSTOMOUTPUTCS** }  
*Output RGB color space used to decoded image RAWCOLOR: No output color profile (Linear RAW).*
- enum [WhiteBalance](#) {  
**NONE** = 0 , **CAMERA** = 1 , **AUTO** = 2 , **CUSTOM** = 3 ,  
**AERA** = 4 }  
*White balances alternatives NONE: no white balance used : reverts to standard daylight D65 WB.*

### Public Member Functions

- [DRawDecoderSettings](#) ()=default  
*Standard constructor with default settings.*
- [DRawDecoderSettings](#) (const [DRawDecoderSettings](#) &o)  
*Equivalent to the copy constructor.*
- [~DRawDecoderSettings](#) ()=default

*Method to use a settings to optimize time loading, for example to compute image histogram.*

## Public Attributes

- bool **autoBrightness** = true  
*If false, use a fixed white level, ignoring the image histogram.*
- int **blackPoint** = 0  
*Black Point value of output image.*
- double **brightness** = 1.0  
*Brightness of output image.*
- int **customWhiteBalance** = 6500  
*The temperature and the green multiplier of the custom white balance.*
- double **customWhiteBalanceGreen** = 1.0
- bool **dcbEnhanceFI** = false  
*Turn on the DCB interpolation with enhance interpolated colors.*
- int **dcbIterations** = -1  
*For DCB interpolation.*
- QString **deadPixelMap**  
*Path to text file including dead pixel list.*
- bool **DontStretchPixels** = false  
*For cameras with non-square pixels, do not stretch the image to its correct aspect ratio.*
- bool **enableBlackPoint** = false  
*Turn on the black point setting to decode RAW image.*
- bool **enableWhitePoint** = false  
*Turn on the white point setting to decode RAW image.*
- bool **expoCorrection** = false  
*Turn on the Exposure Correction before interpolation.*
- double **expoCorrectionHighlight** = 0.0  
*Amount of highlight preservation for exposure correction before interpolation in E.V.*
- double **expoCorrectionShift** = 1.0  
*Shift of Exposure Correction before interpolation in linear scale.*
- bool **fixColorsHighlights** = false  
*If true, images with overblown channels are processed much more accurate, without 'pink clouds' (and blue highlights under tungsten lamps).*
- bool **halfSizeColorImage** = false  
*Half-size color image decoding (twice as fast as "enableRAWQuality").*
- InputColorSpace **inputColorSpace** = NOINPUTCS  
*The input color profile used to decoded RAW data.*
- QString **inputProfile**  
*Path to custom input ICC profile to define the camera's raw colorspace.*
- int **medianFilterPasses** = 0  
*After interpolation, clean up color artifacts by repeatedly applying a 3x3 median filter to the R-G and B-G channels.*
- int **NRThreshold** = 0  
*Noise reduction threshold value.*
- NoiseReduction **NRType** = NONR  
*Noise reduction method to apply before demosaicing.*
- OutputColorSpace **outputColorSpace** = SRGB  
*The output color profile used to decoded RAW data.*
- QString **outputProfile**  
*Path to custom output ICC profile to define the color workspace.*
- DecodingQuality **RAWQuality** = BILINEAR  
*RAW quality decoding factor value.*
- bool **RGBInterpolate4Colors** = false

- Turn on RAW file decoding using RGB interpolation as four colors.*

  - bool **sixteenBitsImage** = false
    - Turn on RAW file decoding in 16 bits per color per pixel instead 8 bits.*
  - int **unclipColors** = 0
    - Unclip Highlight color level: 0 = Clip all highlights to solid white.*
  - **WhiteBalance whiteBalance** = CAMERA
    - White balance type to use.*
  - QRect **whiteBalanceArea**
    - Rectangle used to calculate the white balance by averaging the region of image.*
  - int **whitePoint** = 0
    - White Point value of output image.*

## 9.448.1 Member Enumeration Documentation

### 9.448.1.1 DecodingQuality

```
enum Digikam::DRawDecoderSettings::DecodingQuality
```

#### Note

from original dcraw demosaic

Bilinear: use high-speed but low-quality bilinear interpolation (default - for slow computer). In this method, the red value of a non-red pixel is computed as the average of the adjacent red pixels, and similar for blue and green. VNG: use Variable Number of Gradients interpolation. This method computes gradients near the pixel of interest and uses the lower gradients (representing smoother and more similar parts of the image) to make an estimate. PPG↔: use Patterned Pixel Grouping interpolation. Pixel Grouping uses assumptions about natural scenery in making estimates. It has fewer color artifacts on natural images than the Variable Number of Gradients method. AHD: use Adaptive Homogeneity-Directed interpolation. This method selects the direction of interpolation so as to maximize a homogeneity metric, thus typically minimizing color artifacts. DCB: DCB interpolation (see [www.linuxphoto.org/html/dcb.html](http://www.linuxphoto.org/html/dcb.html) for details) DHT: DHT interpolation. AAHD: Enhanced Adaptive AHD interpolation.

### 9.448.1.2 InputColorSpace

```
enum Digikam::DRawDecoderSettings::InputColorSpace
```

EMBEDDED: Use the camera profile embedded in RAW file if exist. CUSTOMINPUTCS: Use a custom input color space profile.

### 9.448.1.3 NoiseReduction

```
enum Digikam::DRawDecoderSettings::NoiseReduction
```

WAVELETSNR: wavelets correction to erase noise while preserving real detail. It's applied after interpolation. FBDDNR: Fake Before Demosaicing Denoising noise reduction. It's applied before interpolation.

### 9.448.1.4 OutputColorSpace

enum `Digikam::DRawDecoderSettings::OutputColorSpace`

SRGB: Use standard sRGB color space. ADOBERGB: Use standard Adobe RGB color space. WIDEGAMMUT↔ : Use standard RGB Wide Gamut color space. PROPHOTO: Use standard RGB Pro Photo color space. CUSTOMOUTPUTCS: Use a custom workspace color profile.

### 9.448.1.5 WhiteBalance

enum `Digikam::DRawDecoderSettings::WhiteBalance`

CAMERA: Use the camera embedded WB if available. Reverts to NONE if not. AUTO: Averages an auto WB on the entire image. CUSTOM: Let use set it's own temperature and green factor (later converted to RGBG factors). AERA: Let use an area from image to average white balance (see `whiteBalanceArea` for details).

## 9.448.2 Member Data Documentation

### 9.448.2.1 dcbIterations

```
int Digikam::DRawDecoderSettings::dcbIterations = -1
```

Number of DCB median filtering correction passes. -1 : disable (default) 1-10 : DCB correction passes

### 9.448.2.2 DontStretchPixels

```
bool Digikam::DRawDecoderSettings::DontStretchPixels = false
```

In any case, this option guarantees that each output pixel corresponds to one RAW pixel.

### 9.448.2.3 expoCorrectionHighlight

```
double Digikam::DRawDecoderSettings::expoCorrectionHighlight = 0.0
```

Usable range is from 0.0 (linear exposure shift, highlights may blow) to 1.0 (maximum highlights preservation) This settings can only take effect if `expoCorrectionShift > 1.0`.

### 9.448.2.4 expoCorrectionShift

```
double Digikam::DRawDecoderSettings::expoCorrectionShift = 1.0
```

Usable range is from 0.25 (darken image 1 stop : -2EV) to 8.0 (lighten ~1.5 photographic stops : +3EV).

### 9.448.2.5 halfSizeColorImage

```
bool Digikam::DRawDecoderSettings::halfSizeColorImage = false
```

Turn on this option to reduce time loading to render histogram for example, no to render an image to screen.

### 9.448.2.6 inputColorSpace

`InputColorSpace` Digikam::DRawDecoderSettings::inputColorSpace = NOINPUTCS

See OutputColorProfile values for details.

### 9.448.2.7 NRThreshold

`int` Digikam::DRawDecoderSettings::NRThreshold = 0

Null value disable NR. Range is between 100 and 1000. For IMPULSENK : set the amount of Luminance impulse denoise.

### 9.448.2.8 outputColorSpace

`OutputColorSpace` Digikam::DRawDecoderSettings::outputColorSpace = SRGB

See OutputColorProfile values for details.

### 9.448.2.9 RAWQuality

`DecodingQuality` Digikam::DRawDecoderSettings::RAWQuality = BILINEAR

See DecodingQuality values for details.

### 9.448.2.10 unclipColors

`int` Digikam::DRawDecoderSettings::unclipColors = 0

1 = Leave highlights unclipped in various shades of pink. 2 = Blend clipped and unclipped values together for a gradual fade to white. 3-9 = Reconstruct highlights. Low numbers favor whites; high numbers favor colors.

### 9.448.2.11 whiteBalance

`WhiteBalance` Digikam::DRawDecoderSettings::whiteBalance = CAMERA

See WhiteBalance values for detail

## 9.449 Digikam::DRawDecoderWidget Class Reference

## 9.449.1 Constructor & Destructor Documentation

### 9.449.1.1 DRawDecoderWidget()

```
Digikam::DRawDecoderWidget::DRawDecoderWidget (
    QWidget *const parent,
    int advSettings = COLORSPACE ) [explicit]
```

#### Parameters

<i>parent</i>	the parent widget instance
<i>advSettings</i>	the default value is COLORSPACE

## 9.449.2 Member Function Documentation

### 9.449.2.1 readSettings()

```
void Digikam::DRawDecoderWidget::readSettings (
    KConfigGroup & group ) [override], [virtual]
```

Reimplemented from [Digikam::DExpanderBox](#).

### 9.449.2.2 writeSettings()

```
void Digikam::DRawDecoderWidget::writeSettings (
    KConfigGroup & group ) [override], [virtual]
```

Reimplemented from [Digikam::DExpanderBox](#).

*White level from Raw histogram.*
- QByteArray **xmpData**  
*Xmp metadata container extracted from RAW file, if present.*

## 9.451.1 Constructor & Destructor Documentation

### 9.451.1.1 DRawInfo()

```
Digikam::DRawInfo::DRawInfo ( ) [explicit]
```

< NOTE: see bug #253911 : [y][x] not [x][y]

## 9.451.2 Member Data Documentation

### 9.451.2.1 ambientAcceleration

```
float Digikam::DRawInfo::ambientAcceleration = -1000.0F
```

-1000 is an invalid acceleration.

### 9.451.2.2 ambientElevationAngle

```
float Digikam::DRawInfo::ambientElevationAngle = -1000.0F
```

-1000 is an invalid angle.

### 9.451.2.3 ambientHumidity

```
float Digikam::DRawInfo::ambientHumidity = -1000.0F
```

-1000 is an invalid humidity.

### 9.451.2.4 ambientPressure

```
float Digikam::DRawInfo::ambientPressure = -1000.0F
```

-1000 is an invalid pressure.

### 9.451.2.5 ambientTemperature

```
float Digikam::DRawInfo::ambientTemperature = -1000.0F
```

-1000 is an invalid temperature.

### 9.451.2.6 ambientWaterDepth

```
float Digikam::DRawInfo::ambientWaterDepth = 1000.0F
```

1000 is an invalid water depth.

### 9.451.2.7 baselineExposure

```
float Digikam::DRawInfo::baselineExposure = -999.0F
```

-999 is an invalid exposure.

### 9.451.2.8 DNGVersion

```
QString Digikam::DRawInfo::DNGVersion
```

NOTE: it is only shown with DNG RAW files.

### 9.451.2.9 exposureIndex

```
float Digikam::DRawInfo::exposureIndex = -1.0F
```

Valid value is unsigned.

### 9.451.2.10 exposureProgram

```
int Digikam::DRawInfo::exposureProgram = -1
```

Valid value is unsigned.

### 9.451.2.11 flashUsed

```
int Digikam::DRawInfo::flashUsed = -1
```

Valid value is unsigned.

### 9.451.2.12 meteringMode

```
int Digikam::DRawInfo::meteringMode = -1
```

Valid value is unsigned.

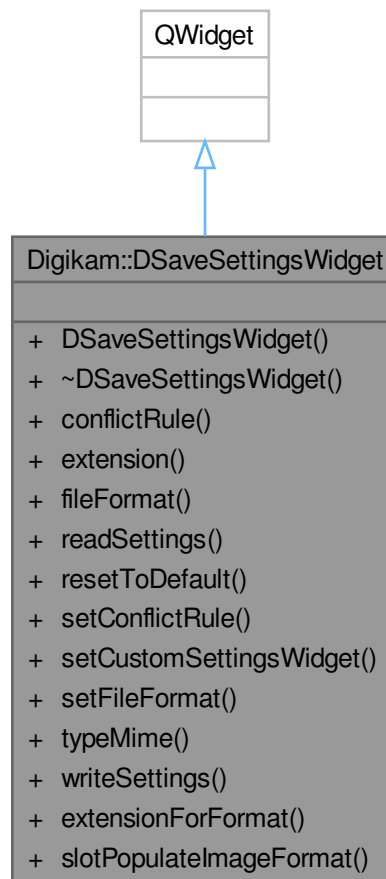

### 9.451.2.13 pixelAspectRatio

```
float Digikam::DRawInfo::pixelAspectRatio = 1.0F
```

NOTE: if == 1.0, libraw CLI tool do not show this value. Default value = 1.0. This can be unavailable (depending of camera model).

## 9.452 Digikam::DSaveSettingsWidget Class Reference

Inheritance diagram for Digikam::DSaveSettingsWidget:

### Public Types

- enum `OutputFormat` { `OUTPUT_PNG = 0` , `OUTPUT_TIFF` , `OUTPUT_JPEG` , `OUTPUT_PPM` }

### Public Slots

- void `slotPopulateImageFormat` (bool sixteenBits)

### Signals

- void `signalConflictButtonChanged` (int)
- void `signalSaveFormatChanged` ()

### Public Member Functions

- void **setMaxRight** (qreal maxRight)
- void **setRect** (const QRectF &rect)

## 9.454 Digikam::DSelector Class Reference

[DSelector](#) is the base class for other widgets which provides the ability to choose from a one-dimensional range of values.

Inheritance diagram for Digikam::DSelector:

## Public Member Functions

- **DSelector** (Qt::Orientation o, QWidget \*const parent=nullptr)
- **DSelector** (QWidget \*const parent=nullptr)
- Qt::ArrowType **arrowDirection** () const
- QRect **contentsRect** () const
- bool **indent** () const

- void **setArrowDirection** (Qt::ArrowType direction)  
*Sets the arrow direction.*
- void **setIndent** (bool i)  
*Sets the indent option of the widget to i.*

### Protected Member Functions

- virtual void **drawArrow** (QPainter \*painter, const QPoint &pos)  
*Override this function to draw the cursor which indicates the current value.*
- virtual void **drawContents** (QPainter \*)  
*Override this function to draw the contents of the control.*
- void **mouseMoveEvent** (QMouseEvent \*e) override
- void **mousePressEvent** (QMouseEvent \*e) override
- void **mouseReleaseEvent** (QMouseEvent \*e) override
- void **paintEvent** (QPaintEvent \*) override
- void **wheelEvent** (QWheelEvent \*) override

### Properties

- Qt::ArrowType **arrowDirection**
- bool **indent**
- int **maxValue**
- int **minValue**
- int **value**

### Friends

- class **Private**

## 9.454.1 Detailed Description

An example is the KGradientSelector which allows to choose from a range of colors.

A custom drawing routine for the widget surface has to be provided by the subclass.

## 9.454.2 Member Function Documentation

### 9.454.2.1 arrowDirection()

```
Qt::ArrowType Digikam::DSelector::arrowDirection ( ) const
```

#### Returns

the current arrow direction

### 9.454.2.2 contentsRect()

```
QRect Digikam::DSelector::contentsRect ( ) const
```

#### Returns

the rectangle on which subclasses should draw.

### 9.454.2.3 drawContents()

```
virtual void Digikam::DSelector::drawContents (
    QPainter * ) [inline], [protected], [virtual]
```

The default implementation does nothing.

Draw only within [contentsRect\(\)](#).

Reimplemented in [Digikam::DColorValueSelector](#).

### 9.454.2.4 indent()

```
bool Digikam::DSelector::indent ( ) const
```

#### Returns

whether the indent option is set.

### 9.454.2.5 setIndent()

```
void Digikam::DSelector::setIndent (
    bool i )
```

This determines whether a shaded frame is drawn.

## 9.455 Digikam::DServiceInfo Class Reference

### Public Member Functions

- **DServiceInfo** (const [DServiceInfo](#) &other)
- **DServiceInfo** (const QString &\_name, const QString &\_exec, const QString &\_icon, const QString &\_topt, bool \_term)

## Protected Attributes inherited from [Digikam::DAbstractSliderSpinBox](#)

- DAbstractSliderSpinBoxPrivate \*const **d\_ptr**

## 9.457.1 Member Function Documentation

### 9.457.1.1 setInternalValue()

```
void Digikam::DSliderSpinBox::setInternalValue (
    int value,
    bool blockUpdateSignal ) [override], [protected], [virtual]
```

Inheriting classes should respect blockUpdateSignal so that, in specific cases, we have a performance improvement. See setIgnoreMouseMoveEvents.

Implements [Digikam::DAbstractSliderSpinBox](#).

### 9.457.1.2 valueString()

```
QString Digikam::DSliderSpinBox::valueString ( ) const [override], [protected], [virtual]
```

Implements [Digikam::DAbstractSliderSpinBox](#).

## 9.458 Digikam::DSplashScreen Class Reference

Inheritance diagram for Digikam::DSplashScreen:

### Public Member Functions

- void **setColor** (const QColor &color)
- void **setMessage** (const QString &message)

### Protected Member Functions

- void **drawContents** (QPainter \*) override

## 9.459 Digikam::DSqueezedClickLabel Class Reference

Inheritance diagram for Digikam::DSqueezedClickLabel:

### Signals

- void **activated** ()
- void **leftClicked** ()

### Public Member Functions

- **DSqueezedClickLabel** (const QString &text, QWidget \*const parent=nullptr)
- **DSqueezedClickLabel** (QWidget \*const parent=nullptr)

## Public Member Functions inherited from [Digikam::DAdjustableLabel](#)

- **DAdjustableLabel** (QWidget \*const parent=nullptr)
- QString **adjustedText** () const
- QSize **minimumSizeHint** () const override
- void **setAlignment** (Qt::Alignment align)
- void **setElideMode** (Qt::TextElideMode mode)
- QSize **sizeHint** () const override

## Protected Member Functions

- void **keyPressEvent** (QKeyEvent \*event) override
- void **mousePressEvent** (QMouseEvent \*event) override
- void **mouseReleaseEvent** (QMouseEvent \*event) override

## Additional Inherited Members

## Public Slots inherited from [Digikam::DAdjustableLabel](#)

- void **setAdjustedText** (const QString &text=QString())

## 9.460 Digikam::DTagListDrag Class Reference

Provides a drag object for a list of tags.

Inheritance diagram for Digikam::DTagListDrag:

### Public Member Functions

- **DTagListDrag** (const QList< int > &tagIDs)

### Static Public Member Functions

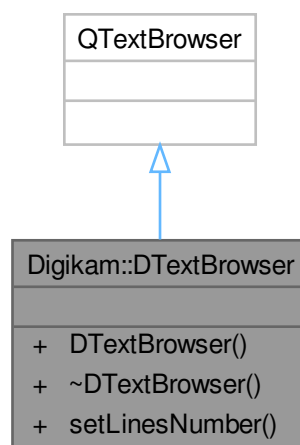

- static bool **canDecode** (const QMimeData \*e)
- static bool **decode** (const QMimeData \*e, QList< int > &tagIDs)
- static QStringList **mimeTypes** ()

## 9.460.1 Detailed Description

When a tag is moved through drag'n'drop an object of this class is created.

## 9.461 Digikam::DTextBrowser Class Reference

Inheritance diagram for Digikam::DTextBrowser:

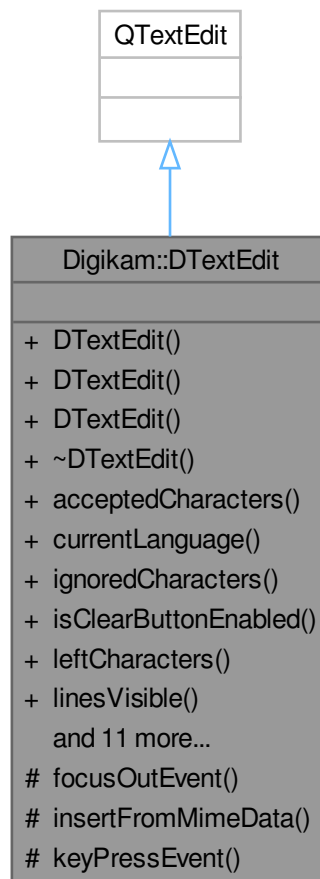

### Public Member Functions

- **DTextBrowser** (const QString &text, QWidget \*const parent=nullptr)
- void **setLinesNumber** (int l)

## 9.462 Digikam::DTextEdit Class Reference

A text edit widget based on QTextEdit with spell checker capabilities based on Sonnet (optional).

Inheritance diagram for Digikam::DTextEdit:

### Signals

- void **editingFinished** ()
- void **returnPressed** ()
  - Emitted only when mimic QLineEdit mode is enabled.*
- void **textEdited** (const QString &)

### Public Member Functions

- **DTextEdit** (const QString &contents, QWidget \*const parent=nullptr)
  - Constructor with text contents to use.*
- **DTextEdit** (QWidget \*const parent=nullptr)

- Default constructor.*
- [DTextEdit](#) (unsigned int lines, QWidget \*const parent=nullptr)
  - Constructor with a number of lines.*
- [~DTextEdit](#) () override
  - Standard destructor.*
- QString [acceptedCharacters](#) () const
  - This property holds whether the edit widget handle the mask of accepted characters in text editor.*
- QString [currentLanguage](#) () const
- QString [ignoredCharacters](#) () const
  - This property holds whether the edit widget handle the mask of ignored characters in text editor.*
- bool [isClearButtonEnabled](#) () const
  - This property holds whether the edit widget displays a clear button when it is not empty.*
- int [leftCharacters](#) () const
  - Return the left characters that user can enter if a limit have been previously set with [setMaxLeght\(\)](#).*
- unsigned int [linesVisible](#) () const
- int [maxLength](#) () const
- void [setAcceptedCharacters](#) (const QString &mask)
- void [setClearButtonEnabled](#) (bool enable)
- void [setCurrentLanguage](#) (const QString &lang)
  - This property holds whether the edit widget handle a specific spell-checker language (2 letters code based as "en", "fr", "es", etc.).*
- void [setIgnoredCharacters](#) (const QString &mask)
- void [setLinesVisible](#) (unsigned int lines)
  - This property holds whether the edit widget handle visible lines used by the widget to show text.*
- void [setLocalizeSettings](#) (const [LocalizeContainer](#) &settings)
- void [setMaxLength](#) (int length)
  - This property holds whether the edit widget handle the maximum of characters that user can enter in editor.*
- void [setText](#) (const QString &text)
- [LocalizeContainer](#) [spellCheckSettings](#) () const
  - This property holds whether the edit widget handle the Spellcheck settings.*
- QString [text](#) () const
  - This property holds whether the edit widget handle text contents as plain text.*

## Protected Member Functions

- void [focusOutEvent](#) (QFocusEvent \*e) override
- void [insertFromMimeData](#) (const QMimeData \*source) override
- void [keyPressEvent](#) (QKeyEvent \*e) override

### 9.462.1 Detailed Description

Widget size can be constrained with the number of visible lines. A single line constraint will emulate [QLineEdit](#). See [setLinesVisible\(\)](#) for details. The maximum number of characters can be limited with [setMaxLenght\(\)](#). The characters can be limited in editor by [setIgnoredCharacters\(\)](#) and [setAcceptedCharacters\(\)](#). Implementation: [dtextedit.cpp](#)

## 9.462.2 Constructor & Destructor Documentation

### 9.462.2.1 DTextEdit()

```
Digikam::DTextEdit::DTextEdit (
    unsigned int lines,
    QWidget *const parent = nullptr ) [explicit]
```

Zero lines do not apply a size constraint.

## 9.462.3 Member Function Documentation

### 9.462.3.1 acceptedCharacters()

```
QString Digikam::DTextEdit::acceptedCharacters ( ) const
```

The mask of characters is passed as string (ex: "abcABC"). By default the mask is empty.

### 9.462.3.2 ignoredCharacters()

```
QString Digikam::DTextEdit::ignoredCharacters ( ) const
```

The mask of characters is passed as string (ex: "+/!()"). By default the mask is empty.

### 9.462.3.3 isClearButtonEnabled()

```
bool Digikam::DTextEdit::isClearButtonEnabled ( ) const
```

If enabled, the edit widget displays a trailing clear button when it contains some text, otherwise the edit widget does not show a clear button. This option only take effect in QLineEdit emulation mode when lines visible is set to 1. See [setLinesVisible\(\)](#) for details.

### 9.462.3.4 returnPressed

```
void Digikam::DTextEdit::returnPressed ( ) [signal]
```

See [setLinesVisible\(\)](#) for details.

### 9.462.3.5 setCurrentLanguage()

```
void Digikam::DTextEdit::setCurrentLanguage (
    const QString & lang )
```

If this property is not set, spell-checker will try to auto-detect language by parsing the text. To reset this setting, pass a empty string as language. If Sonnet dependencies is not resolved, these method do nothing.

### 9.462.3.6 setLinesVisible()

```
void Digikam::DTextEdit::setLinesVisible (
    unsigned int lines )
```

Lines must be superior or equal to 1 to apply a size constraint. Notes: if a single visible line is used, the widget will emulate QLineEdit. a null value do not apply a size constraint.

### 9.462.3.7 setMaxLength()

```
void Digikam::DTextEdit::setMaxLength (
    int length )
```

By default no limit is set. A zero length reset a limit.

### 9.462.3.8 spellCheckSettings()

```
LocalizeContainer Digikam::DTextEdit::spellCheckSettings ( ) const
```

See [LocalizeContainer](#) class for details.

### 9.462.3.9 text()

```
QString Digikam::DTextEdit::text ( ) const
```

If ignored or accepted characters masks are set, text is filtered accordingly.

## 9.463 Digikam::DTextLabelName Class Reference

Inheritance diagram for Digikam::DTextLabelName:

**9.467.1 Member Function Documentation****9.467.1.1 deleteDirRecursivley()**

```
bool Digikam::DTrash::deleteDirRecursivley (
    const QString & dirToDelete,
    const QDateTime & deleteTime ) [static]
```

**Parameters**

<i>dirToDelete</i>	path to folder
<i>deleteTime</i>	delete time from the image

**Returns**

true if folder was deleted

**9.467.1.2 deleteImage()**

```
bool Digikam::DTrash::deleteImage (
    const QString & imagePath,
    const QDateTime & deleteTime ) [static]
```

**Parameters**

<i>imagePath</i>	path to image
<i>deleteTime</i>	delete time from the image

**Returns**

true if the image was deleted

**9.467.1.3 extractJsonForItem()**

```
void Digikam::DTrash::extractJsonForItem (
    const QString & collPath,
    const QString & baseName,
    DTrashItemInfo & itemInfo ) [static]
```

**Parameters**

<i>collPath</i>	path to collection
<i>baseName</i>	name of the file inside the trash
<i>itemInfo</i>	item to extract data to it

*returns the index for the DTrashItemInfo in model*
- bool **isEmpty** ()
- DTrashItemInfo **itemForIndex** (const QModelIndex &index)  
*returns DTrashItemInfo for specific index in model*
- DTrashItemInfoList **itemsForIndexes** (const QList< QModelIndex > &indexes)  
*returns DTrashItemInfoList for given indexes in model*
- void **loadItemsForCollection** (const QString &colPath)  
*Runs a thread to list all items from a collection trash.*
- bool  **pixmapForItem** (const QString &path, QPixmap &pix) const  
*loads a thumbnail for item in trash for showing*
- int **rowCount** (const QModelIndex &) const override  
*QAbstractItemModel interface.*
- void **sort** (int column, Qt::SortOrder order=Qt::AscendingOrder) override
- void **stopLoadingTrash** ()  
*Stop loading of trash.*
- QString **trashAlbumPath** () const

## 9.469.1 Member Function Documentation

### 9.469.1.1 append

```
void Digikam::DTrashItemModel::append (
    const DTrashItemInfo & itemInfo ) [slot]
```

#### Parameters

<i>itemInfo</i>	item to append
-----------------	----------------

**9.469.1.2 changeThumbSize()**

```
void Digikam::DTrashItemModel::changeThumbSize (
    int size )
```

**Parameters**

<i>size</i>	size to change to
-------------	-------------------

**9.469.1.3 isEmpty()**

```
bool Digikam::DTrashItemModel::isEmpty ( )
```

**Returns**

true if there is no data in the model

**9.469.1.4 loadItemsForCollection()**

```
void Digikam::DTrashItemModel::loadItemsForCollection (
    const QString & colPath )
```

**Parameters**

<i>colPath</i>	path to collection to load items for
----------------	--------------------------------------

**9.469.1.5 pixmapForItem()**

```
bool Digikam::DTrashItemModel::pixmapForItem (
    const QString & path,
    QPixmap & pix ) const
```

**Parameters**

<i>path</i>	path of image in trash
<i>pix</i>	Pixmap to fill

**Returns**

true if there is an available thumbnail

**9.469.1.6 refreshThumbnails**

```
void Digikam::DTrashItemModel::refreshThumbnails (
    const LoadingDescription & desc,
    const QPixmap & pix ) [slot]
```

**Parameters**

<i>desc</i>	loading description from thumbnail load thread
<i>pix</i>	pixmap from thumbnail load thread

**9.469.1.7 removeItems**

```
void Digikam::DTrashItemModel::removeItems (  
    const QModelIndexList & indexes ) [slot]
```

**Parameters**

<i>indexes</i>	indexes to remove
----------------	-------------------

## 9.470 Digikam::DTrashItemsListingJob Class Reference

## 9.472 [Digikam::DuplicatesProgressObserver](#) Class Reference

Inheritance diagram for [Digikam::DuplicatesProgressObserver](#):

### Public Member Functions

- `DuplicatesProgressObserver` ([SearchesJob](#) \*const thread)
- void `imageProcessed` (const [ItemInfo](#) &inf, const QImage &img, int dup) override
- bool `isCanceled` () override

### 9.472.1 Member Function Documentation

#### 9.472.1.1 `imageProcessed()`

```
void Digikam::DuplicatesProgressObserver::imageProcessed (
    const ItemInfo & inf,
    const QImage & img,
    int dup ) [override], [virtual]
```

Implements [Digikam::HaarProgressObserver](#).

## 9.472.1.2 isCanceled()

```
bool Digikam::DuplicatesProgressObserver::isCanceled ( ) [override], [virtual]
```

Reimplemented from [Digikam::HaarProgressObserver](#).

## 9.473 Digikam::DVBox Class Reference

A Vertical widget to host children widgets.

Inheritance diagram for Digikam::DVBox:

## Public Member Functions

- **DVBox** (QWidget \*const parent=nullptr)

Public Member Functions inherited from [Digikam::DHBox](#)

- **DHBox** (QWidget \*const parent=nullptr)
- QSize **minimumSizeHint** () const override
- void **setContentsMargins** (const QMargins &margins)
- void **setContentsMargins** (int left, int top, int right, int bottom)
- void **setSpacing** (int space)
- void **setStretchFactor** (QWidget \*const widget, int stretch)
- QSize **sizeHint** () const override

### Additional Inherited Members

### Protected Member Functions inherited from [Digikam::DHBox](#)

- **DHBox** (bool vertical, QWidget \*const parent)
- void **childEvent** (QChildEvent \*e) override

## 9.474 Digikam::DWItemDelegate Class Reference

This class allows to create item delegates embedding simple widgets to interact with items.

Inheritance diagram for Digikam::DWItemDelegate:

### Public Member Functions

- `DWItemDelegate` (`QAbstractItemView *const itemView`, `QObject *const parent=nullptr`)  
*Creates a new `ItemDelegate` to be used with a given `itemview`.*
- `QPersistentModelIndex focusedIndex` () const  
*Retrieves the currently focused index.*
- `QAbstractItemView * itemView` () const  
*Retrieves the item view this delegate is monitoring.*

## Protected Member Functions

- `QList< QEvent::Type > blockedEventTypes` (`QWidget *const widget`) `const`  
*Retrieves the list of blocked event types for the given widget.*
- virtual `QList< QWidget * > createItemWidgets` (`const QModelIndex &index`) `const =0`  
*Creates the list of widgets needed for an item.*
- void `setBlockedEventTypes` (`QWidget *const widget`, `const QList< QEvent::Type > &types`) `const`  
*Sets the list of event types that a widget will block.*
- virtual void `updateItemWidgets` (`const QList< QWidget * > &widgets`, `const QStyleOptionViewItem &option`, `const QModelIndex &index`) `const =0`  
*Updates a list of widgets for its use inside of the delegate (painting or event handling).*

## Friends

- class `DWItemDelegateEventListener`
- class `DWItemDelegatePool`

## 9.474.1 Detailed Description

For instance you can add push buttons, line edits, etc. to your delegate and use them to modify the state of your model.

## 9.474.2 Constructor & Destructor Documentation

### 9.474.2.1 DWItemDelegate()

```
Digikam::DWItemDelegate::DWItemDelegate (
    QAbstractItemView *const itemView,
    QObject *const parent = nullptr ) [explicit]
```

#### Parameters

<i>itemView</i>	the item view the new delegate will monitor
<i>parent</i>	the parent of this delegate

## 9.474.3 Member Function Documentation

### 9.474.3.1 blockedEventTypes()

```
QList< QEvent::Type > Digikam::DWItemDelegate::blockedEventTypes (
    QWidget *const widget ) const [protected]
```

#### Parameters

<i>widget</i>	the specified widget.
---------------	-----------------------

**Returns**

the list of blocked event types, can be empty if no events are blocked.

**9.474.3.2 createItemWidgets()**

```
virtual QList< QWidget * > Digikam::DWItemDelegate::createItemWidgets (
    const QModelIndex & index ) const [protected], [pure virtual]
```

**Note**

No initialization of the widgets is supposed to happen here. The widgets will be initialized based on needs for a given item.

If you want to connect some widget signals to any slot, you should do it here.

- index the index to create widgets for.

**Note**

If you want to know the index for which you are creating widgets, it is available as a QModelIndex [Q\\_↔](#) PROPERTY called "goya:creatingWidgetsForIndex". Ensure to add Q\_DECLARE\_METATYPE(QModelIndex) before your method definition to tell QVariant about QModelIndex.

**Returns**

the list of newly created widgets which will be used to interact with an item.

**See also**

[updateItemWidgets\(\)](#)

Implemented in [Digikam::SetupCollectionDelegate](#).

**9.474.3.3 focusedIndex()**

```
QPersistentModelIndex Digikam::DWItemDelegate::focusedIndex ( ) const
```

An invalid index if none is focused.

**Returns**

the current focused index, or QPersistentModelIndex() if none is focused.

**9.474.3.4 itemView()**

```
QAbstractItemView * Digikam::DWItemDelegate::itemView ( ) const
```

**Returns**

the item view this delegate is monitoring

**9.474.3.5 setBlockedEventTypes()**

```
void Digikam::DWItemDelegate::setBlockedEventTypes (
    QWidget *const widget,
    const QList< QEvent::Type > & types ) const [protected]
```

Blocked events are not passed to the view. This way you can prevent an item from being selected when a button is clicked for instance.

## Parameters

<i>widget</i>	the widget which must block events
<i>types</i>	the list of event types the widget must block

**9.474.3.6 updateItemWidgets()**

```
virtual void Digikam::DWItemDelegate::updateItemWidgets (
    const QList< QWidget * > & widgets,
    const QStyleOptionViewItem & option,
    const QPersistentModelIndex & index ) const [protected], [pure virtual]
```

## Note

All the positioning and sizing should be done in item coordinates.

## Warning

Do not make widget connections in here, since this method will be called very regularly.

## Parameters

<i>widgets</i>	the widgets to update
<i>option</i>	the current set of style options for the view.
<i>index</i>	the model index of the item currently manipulated.

Implemented in [Digikam::SetupCollectionDelegate](#).

**9.475 Digikam::DWItemDelegatePool Class Reference**

## Public Types

- enum **UpdateWidgetsEnum** { **UpdateWidgets** = 0 , **NotUpdateWidgets** }

## Public Member Functions

- [DWItemDelegatePool](#) ([DWItemDelegate](#) \*const delegate)  
*Creates a new ItemDelegatePool.*
- [QList< QWidget \\* >](#) [findWidgets](#) (const [QPersistentModelIndex](#) &index, const [QStyleOptionViewItem](#) &option, [UpdateWidgetsEnum](#) updateWidgets=[UpdateWidgets](#)) const  
*Returns the widget associated to index and widget.*
- void **fullClear** ()
- [QList< QWidget \\* >](#) **invalidIndexesWidgets** () const

## Friends

- class **DWItemDelegate**
- class **DWItemDelegatePrivate**

## 9.475.1 Constructor & Destructor Documentation

### 9.475.1.1 DWItemDelegatePool()

```
Digikam::DWItemDelegatePool::DWItemDelegatePool (
    DWItemDelegate *const delegate ) [explicit]
```

#### Parameters

<i>delegate</i>	the <a href="#">ItemDelegate</a> for this pool.
-----------------	---

## 9.475.2 Member Function Documentation

### 9.475.2.1 findWidgets()

```
QList< QWidget * > Digikam::DWItemDelegatePool::findWidgets (
    const QPersistentModelIndex & index,
    const QStyleOptionViewItem & option,
    UpdateWidgetsEnum updateWidgets = UpdateWidgets ) const
```

#### Parameters

<i>index</i>	The index to search into.
<i>option</i>	a QStyleOptionViewItem.
<i>updateWidgets</i>	a flag to force to update widgets.

#### Returns

A QList of the pointers to the widgets found.

## 9.476 Digikam::DWItemDelegatePoolPrivate Class Reference

### Public Member Functions

- **DWItemDelegatePoolPrivate** ([DWItemDelegate](#) \*const dd)

### Public Attributes

- bool **clearing** = false
- [DWItemDelegate](#) \* **delegate** = nullptr
- DWItemDelegateEventListener \* **eventListener** = nullptr
- QHash< QPersistentModelIndex, QList< QWidget \* > > **usedWidgets**
- QHash< QWidget \*, QPersistentModelIndex > **widgetInIndex**

## 9.477 Digikam::DWizardDlg Class Reference

Inheritance diagram for Digikam::DWizardDlg:

### Public Member Functions

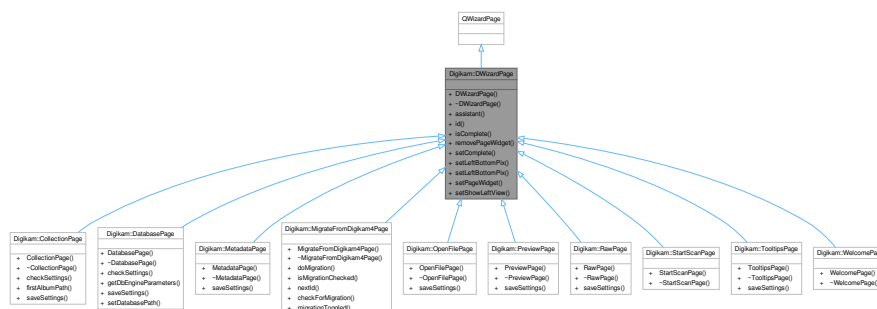

- **DWizardDlg** (QWidget \*const parent, const QString &objName)
- void **setPlugin** (DPlugin \*const tool)

### Protected Member Functions

- void **restoreDialogSize** ()
- void **saveDialogSize** ()
- void **showEvent** (QShowEvent \*) override

## 9.478 Digikam::DWizardPage Class Reference

Inheritance diagram for Digikam::DWizardPage:

**Public Member Functions**

- **DWizardPage** (QWizard \*const dlg, const QString &title)
- QWizard \* **assistant** () const
- int **id** () const
- bool **isComplete** () const override
- void **removePageWidget** (QWidget \*const w)
- void **setComplete** (bool b)
- void **setLeftBottomPix** (const QIcon &icon)
- void **setLeftBottomPix** (const QPixmap &pix)
- void **setPageWidget** (QWidget \*const w)
- void **setShowLeftView** (bool v)

**9.479 Digikam::DWorkingPixmap Class Reference**

A widget to draw progress wheel indicator over thumbnails.

Inheritance diagram for Digikam::DWorkingPixmap:

**Public Member Functions**

- **DWorkingPixmap** (QObject \*const parent=nullptr)
- QPixmap **frameAt** (int index) const
- int **frameCount** () const
- QSize **frameSize** () const
- bool **isEmpty** () const

## 9.480 Digikam::DXmlGuiWindow Class Reference

Generic class to use with all main window.

Inheritance diagram for Digikam::DXmlGuiWindow:

### Public Member Functions

- **DXmlGuiWindow** (QWidget \*const parent=nullptr, Qt::WindowFlags f=Qt::WindowFlags())

- `QList< QAction * > allActions () const`  
*Return all actions from internal collection.*
- `void cleanupActions ()`  
*Cleanup unwanted actions from action collection.*
- `QString configGroupName () const`
- `void createFullScreenAction (const QString &name)`  
*Create Full-screen action to action collection instance from managed window set through `setManagedWindow()`.*
- `void createHelpActions (const QString &handbookSection, bool coreOptions=true)`  
*Create common actions from Help menu for all digiKam main windows.*
- `void createSettingsActions ()`  
*Create common actions to setup all digiKam main windows.*
- `void createSidebarActions ()`  
*Create common actions to handle side-bar through keyboard shortcuts.*
- `bool fullScreensActive () const`  
*Return true if managed window is currently in Full Screen Mode.*
- `virtual DInfoInterface * interface (DPluginAction *const ac)=0`  
*Return the interface instance to access to items information.*
- `void readFullScreenSettings (const KConfigGroup &group)`  
*Read full-screen settings from KDE config file.*
- `virtual void registerExtraPluginsActions (QString &)`
- `void registerPluginsActions ()`  
*Register all generic plugins action to this instance.*
- `void setConfigGroupName (const QString &name)`  
*Manage config group name used by window instance to get/set settings from config file.*
- `void setFullScreenOptions (int options)`  
*Set full-screen options to managed window.*
- `void unminimizeAndActivateWindow ()`

### Static Public Member Functions

- `static QAction * buildStdAction (StdActionType type, const QObject *const recvr, const char *const slot, QObject *const parent)`
- `static QString configFullScreenHideSideBarsEntry ()`
- `static QString configFullScreenHideStatusBarEntry ()`
- `static QString configFullScreenHideThumbBarEntry ()`
- `static QString configFullScreenHideToolBarsEntry ()`  
*Shared with [FullScreenSettings](#).*
- `static void restoreWindowSize (QWindow *const win, const KConfigGroup &group)`
- `static void saveWindowSize (QWindow *const win, KConfigGroup &group)`
- `static void setGoodDefaultWindowSize (QWindow *const win)`
- `static void setupIconTheme ()`  
*If we have some local breeze icon resource, prefer it.*

### Protected Slots

- `bool slotClose ()`

## Protected Member Functions

- void **closeEvent** (QCloseEvent \*e) override
- virtual void **customizedFullScreenMode** (bool set)
 

*Re-implement this method if you want to manage customized view visibility in full-screen mode.*
- void **editKeyboardShortcuts** (KActionCollection \*const extraac=nullptr, const QString &actitle=QString())
 

*Call this method from your main window to show keyboard shortcut config dialog with an extra action collection to configure.*
- bool **eventFilter** (QObject \*obj, QEvent \*ev) override
- void **keyPressEvent** (QKeyEvent \*e) override
- QAction \* **showMenuBarAction** () const
- virtual void **showSideBars** (bool visible)
 

*Re-implement this method if you want to manage sidebars visibility in full-screen mode.*
- QAction \* **showStatusBarAction** () const
- virtual void **showThumbBar** (bool visible)
 

*Re-implement this method if you want to manage thumbbar visibility in full-screen mode.*
- virtual bool **thumbbarVisibility** () const
 

*Re-implement this method if managed window has a thumbbar.*

## Protected Attributes

- **DLogoAction** \* **m\_animLogo** = nullptr

## 9.480.1 Member Function Documentation

### 9.480.1.1 createFullScreenAction()

```
void Digikam::DXmlGuiWindow::createFullScreenAction (
    const QString & name )
```

This action is connected to slotToggleFullScreen() slot. 'name' is action name used in KDE UI rc file.

### 9.480.1.2 customizedFullScreenMode()

```
void Digikam::DXmlGuiWindow::customizedFullScreenMode (
    bool set ) [protected], [virtual]
```

This method is called by switchWindowToFullScreen(). By default this method do nothing.

### 9.480.1.3 editKeyboardShortcuts()

```
void Digikam::DXmlGuiWindow::editKeyboardShortcuts (
    KActionCollection *const extraac = nullptr,
    const QString & actitle = QString() ) [protected]
```

This method is called by slotEditKeys() which can be re-implement in child class for customization.

#### 9.480.1.4 infoface()

```
virtual DInfoInterface * Digikam::DXmlGuiWindow::infoIface (
    DPluginAction *const ac ) [pure virtual]
```

Implemented in [Digikam::DigikamApp](#), [ShowFoto::Showfoto](#), [Digikam::ImageWindow](#), [Digikam::LightTableWindow](#), [Digikam::ImportUI](#), and [Digikam::QueueMgrWindow](#).

#### 9.480.1.5 registerPluginsActions()

```
void Digikam::DXmlGuiWindow::registerPluginsActions ( )
```

Call `registerExtraPluginsActions()` to plug other kind of plugins in GUI.

#### 9.480.1.6 showSideBars()

```
void Digikam::DXmlGuiWindow::showSideBars (
    bool visible ) [protected], [virtual]
```

By default this method do nothing.

#### 9.480.1.7 showThumbBar()

```
void Digikam::DXmlGuiWindow::showThumbBar (
    bool visible ) [protected], [virtual]
```

By default this method do nothing.

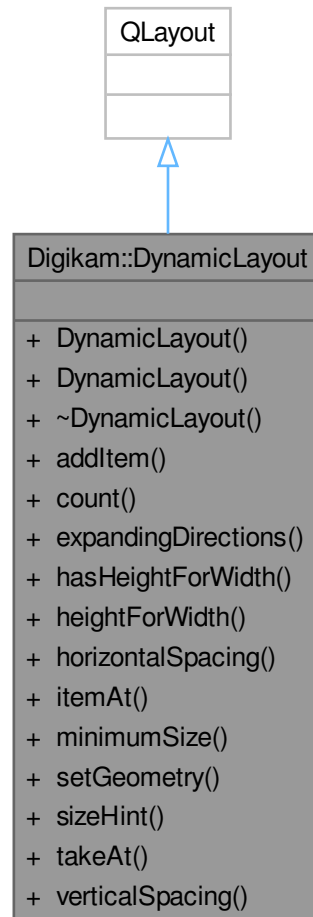

#### 9.480.1.8 thumbbarVisibility()

```
bool Digikam::DXmlGuiWindow::thumbbarVisibility ( ) const [protected], [virtual]
```

This must return visibility state of it.

## 9.481 Digikam::DynamicLayout Class Reference

Inheritance diagram for Digikam::DynamicLayout:

### Public Member Functions

- `DynamicLayout` (int margin=-1, int hSpacing=0, int vSpacing=0)
- `DynamicLayout` (QWidget \*const parent, int margin=-1, int hSpacing=0, int vSpacing=0)
- void `addItem` (QLayoutItem \*item) override
- int `count` () const override
- Qt::Orientations `expandingDirections` () const override
- bool `hasHeightForWidth` () const override
- int `heightForWidth` (int index) const override
- int `horizontalSpacing` () const
- QLayoutItem \* `itemAt` (int index) const override
- QSize `minimumSize` () const override
- void `setGeometry` (const QRect &rect) override
- QSize `sizeHint` () const override
- QLayoutItem \* `takeAt` (int index) override
- int `verticalSpacing` () const

## 9.482 Digikam::DynamicThread Class Reference

Inheritance diagram for Digikam::DynamicThread:

### Public Types

- enum **State** { **Inactive** , **Scheduled** , **Running** , **Deactivating** }

### Public Slots

- void **start** ()
- void **stop** ()  
*Stop computation, sets the running flag to false.*
- void **wait** ()  
*Waits until the thread finishes.*

### Signals

- void **finished** ()
- void **starting** ()  
*Emitted if emitSignals is enabled.*

### Public Member Functions

- **DynamicThread** (QObject \*const parent=nullptr)  
*This class extends QRunnable, so you have to reimplement virtual void [run\(\)](#).*
- **~DynamicThread** () override  
*The destructor calls [stop\(\)](#) and [wait\(\)](#), but if you, in your destructor, delete any data that is accessed by your [run\(\)](#) method, you must call [stop\(\)](#) and [wait\(\)](#) before yourself.*
- bool **isFinished** () const
- bool **isRunning** () const
- QThread::Priority **priority** () const
- virtual void **run** ()=0  
*Implement this pure virtual function in your subclass.*
- void **setEmitSignals** (bool emitThem)
- void **setPriority** (QThread::Priority priority)  
*Sets the priority for this dynamic thread.*
- State **state** () const

## Protected Member Functions

- bool **runningFlag** () const volatile  
*In you [run\(\)](#) method, you shall regularly check for [runningFlag\(\)](#) and cleanup and return if false.*
- void **shutDown** ()  
*If you are deleting data in your destructor which is accessed from the thread, do one of the following from your destructor to guarantee a safe shutdown: 1) Call this method 2) Call [stop\(\)](#) and [wait\(\)](#), knowing that nothing will call [start\(\)](#) anymore after this 3) Be sure the thread will never be running at destruction.*
- void **start** (QMutexLocker< QMutex > &locker)  
*Doing the same as [start\(\)](#), [stop\(\)](#) and [wait](#) above, provide it with a locked QMutexLocker on mutex().*
- void **stop** (const QMutexLocker< QMutex > &locker)
- QMutex \* **threadMutex** () const  
*This is the non-recursive mutex used to protect state variables and waiting in this class.*
- void **wait** (QMutexLocker< QMutex > &locker)

## Friends

- class **DynamicThreadPriv**

## 9.482.1 Constructor & Destructor Documentation

### 9.482.1.1 DynamicThread()

```
Digikam::DynamicThread::DynamicThread (
    QObject *const parent = nullptr ) [explicit]
```

In all aspects the class will act similar to a QThread.

## 9.482.2 Member Function Documentation

### 9.482.2.1 run()

```
virtual void Digikam::DynamicThread::run ( ) [pure virtual]
```

Implemented in [Digikam::DImgThreadedFilter](#), [Digikam::ImageHistogram](#), [Digikam::LoadSaveThread](#), and [Digikam::ScanStateFilter](#).

### 9.482.2.2 setPriority()

```
void Digikam::DynamicThread::setPriority (
    QThread::Priority priority )
```

Can be set anytime. If the thread is currently not running, the priority will be set when it is run next time. When you set QThread::InheritPriority (default), the priority is not changed but inherited from the thread pool.

### 9.482.2.3 shutDown()

```
void Digikam::DynamicThread::shutDown ( ) [protected]
```

Note: This irrevocably stops this object. Note: It is not sufficient that your parent class does this. Calling this method, or providing one of the above mentioned equivalent guarantees, must be done by every single last class in the hierarchy with an implemented destructor deleting data. (the base class destructor is always called after the derived class)

### 9.482.2.4 start()

```
void Digikam::DynamicThread::start (
    QMutexLocker< QMutex > & locker ) [protected]
```

Note the start() will unlock and relock for scheduling once, after state change.

### 9.482.2.5 threadMutex()

```
QMutex * Digikam::DynamicThread::threadMutex ( ) const [protected]
```

You can use it if you want to protect your memory in the same scope as calling start, stop or wait, then using the QMutexLocker variants below. Note that when you have locked this mutex, you must use these variants, as the mutex is non-recursive.

### 9.482.2.6 wait

```
void Digikam::DynamicThread::wait ( ) [slot]
```

Typically, call [stop\(\)](#) before.

## 9.483 Digikam::DZoomBar Class Reference

Inheritance diagram for Digikam::DZoomBar:

### Public Types

- enum `BarMode` { `PreviewZoomCtrl` = 0 , `ThumbsSizeCtrl` , `NoPreviewZoomCtrl` }

## Public Slots

- void **slotUpdateTrackerPos** ()

## Signals

- void **setBarMode** ([BarMode](#) mode)
- void **setThumbsSize** (int size)
- void **setZoom** (double zoom, double zmin, double zmax)
- void **setZoomMinusAction** (QAction \*const action)
- void **setZoomPlusAction** (QAction \*const action)
- void **setZoomTo100Action** (QAction \*const action)
- void **setZoomToFitAction** (QAction \*const action)
- void **triggerZoomTrackerToolTip** ()

## Public Member Functions inherited from [Digikam::DHBox](#)

- **DHBox** (QWidget \*const parent=nullptr)
- QSize **minimumSizeHint** () const override
- void **setContentsMargins** (const QMargins &margins)
- void **setContentsMargins** (int left, int top, int right, int bottom)
- void **setSpacing** (int space)
- void **setStretchFactor** (QWidget \*const widget, int stretch)
- QSize **sizeHint** () const override

## Static Public Member Functions

- static int **sizeFromZoom** (double zoom, double zmin, double zmax)
- static double **zoomFromSize** (int size, double zmin, double zmax)

## Additional Inherited Members

## Protected Member Functions inherited from [Digikam::DHBox](#)

- **DHBox** (bool vertical, QWidget \*const parent)
- void **childEvent** (QChildEvent \*e) override

## 9.483.1 Member Enumeration Documentation

### 9.483.1.1 BarMode

enum [Digikam::DZoomBar::BarMode](#)

## Enumerator

PreviewZoomCtrl	Preview Zoom controller.
ThumbsSizeCtrl	Thumb Size controller. Preview zoom controller still visible but disabled.
NoPreviewZoomCtrl	Thumb Size controller alone. Preview Zoom controller is hidden.

## 9.484 Digikam::EditableSearchTreeView Class Reference

This tree view for searches adds basic editing functionality via the context menu.

Inheritance diagram for Digikam::EditableSearchTreeView:

## Public Member Functions

- [EditableSearchTreeView](#) (QWidget \*const parent, [searchModel](#) \*const searchModel, [SearchModificationHelper](#) \*const searchModificationHelper)

*Constructor.*

- [~EditableSearchTreeView](#) () override

*Destructor.*

### 9.484.1 Detailed Description

This is in detail deleting and renaming existing searches.

#### Author

jwienke

### 9.484.2 Constructor & Destructor Documentation

#### 9.484.2.1 EditableSearchTreeView()

```
Digikam::EditableSearchTreeView::EditableSearchTreeView (
    QWidget *const parent,
    SearchModel *const searchModel,
    SearchModificationHelper *const searchModificationHelper )
```

#### Parameters

<i>parent</i>	qt parent
<i>searchModel</i>	the model this view should act on
<i>searchModificationHelper</i>	the modification helper object used to perform operations on the displayed searches

### 9.484.3 Member Function Documentation

#### 9.484.3.1 addCustomContextMenuActions()

```
void Digikam::EditableSearchTreeView::addCustomContextMenuActions (
    ContextMenuHelper & cmh,
    Album * album ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::AbstractAlbumTreeView](#).

Reimplemented in [Digikam::NormalSearchTreeView](#).

#### 9.484.3.2 contextMenuTitle()

```
QString Digikam::EditableSearchTreeView::contextMenuTitle ( ) const [override], [protected], [virtual]
```

Reimplemented from [Digikam::AbstractAlbumTreeView](#).

### 9.484.3.3 handleCustomContextMenuAction()

```
void Digikam::EditableSearchTreeView::handleCustomContextMenuAction (
    QAction * action,
    const AlbumPointer< Album > & album ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::AbstractAlbumTreeView](#).

Reimplemented in [Digikam::NormalSearchTreeView](#).

## 9.490.1 Member Function Documentation

### 9.490.1.1 deleteFilterInstance()

```
void Digikam::EditorToolThreaded::deleteFilterInstance (
    bool b = true ) [protected]
```

If false, filter instance will be managed outside for ex. with ContentAwareResizing tool.

### 9.490.1.2 setProgressMessage()

```
void Digikam::EditorToolThreaded::setProgressMessage (
    const QString & mess )
```

If it's not set, tool name is used instead.

## 9.491 Digikam::EditorWindow Class Reference

## 9.491.1 Member Function Documentation

### 9.491.1.1 registerExtraPluginsActions()

```
void Digikam::EditorWindow::registerExtraPluginsActions (
    QString & dom ) [override], [virtual]
```

Reimplemented from [Digikam::DXmlGuiWindow](#).

### 9.491.1.2 saveDestinationUrl()

```
virtual QUrl Digikam::EditorWindow::saveDestinationUrl ( ) [protected], [pure virtual]
```

This may also be a remote url.

This method will only be called while saving.

#### Returns

destination for the file that is currently being saved.

### 9.491.1.3 toggleZoomActions()

```
void Digikam::EditorWindow::toggleZoomActions (
    bool val ) [protected]
```

Only tools based on imageregionwidget support zooming. TODO: Fix this behavior when editor tool preview widgets will be factored.

## 9.491.2 Member Data Documentation

### 9.491.2.1 m\_transformQue

```
QVector<TransformType> Digikam::EditorWindow::m_transformQue [protected]
```

#### Note

using QVector to store transforms

*Tells if the Inverse Flattening definitive for this ellipsoid.*
- double `m_semiMajorAxis` = 0.0  
*The equatorial radius.*
- double `m_semiMinorAxis` = 0.0  
*The polar radius.*
- QString `name`

### 9.494.1 Detailed Description

In mathematical terms, it is a surface formed by the rotation of an ellipse about its minor axis. An ellipsoid requires two defining parameters:

- semi-major axis and inverse flattening, or
- semi-major axis and semi-minor axis.

### 9.494.2 Constructor & Destructor Documentation

#### 9.494.2.1 Ellipsoid()

```

Digikam::Ellipsoid::Ellipsoid (
    const QString & name,
    double semiMajorAxis,
    double semiMinorAxis,
    double inverseFlattening,
    bool ivfDefinitive ) [protected]

```

The properties map is given unchanged to the AbstractIdentifiedObjectAbstractIdentifiedObject(Map) super-class constructor.

#### Parameters

<i>name</i>	The ellipsoid name.
<i>semiMajorAxis</i>	The equatorial radius.
<i>semiMinorAxis</i>	The polar radius.
<i>inverseFlattening</i>	The inverse of the flattening value.
<i>ivfDefinitive</i>	true if the inverse flattening is definitive.

#### See also

[createEllipsoid](#)

[createFlattenedSphere](#)

## 9.494.3 Member Function Documentation

### 9.494.3.1 createEllipsoid()

```
Ellipsoid Digikam::Ellipsoid::createEllipsoid (
    const QString & name,
    double semiMajorAxis,
    double semiMinorAxis ) [static]
```

#### Parameters

<i>name</i>	The ellipsoid name.
<i>semiMajorAxis</i>	The equatorial radius.
<i>semiMinorAxis</i>	The polar radius.

### 9.494.3.2 createFlattenedSphere()

```
Ellipsoid Digikam::Ellipsoid::createFlattenedSphere (
    const QString & name,
    double semiMajorAxis,
    double inverseFlattening ) [static]
```

#### Parameters

<i>name</i>	The ellipsoid name.
<i>semiMajorAxis</i>	The equatorial radius.
<i>inverseFlattening</i>	The inverse flattening value. values.

### 9.494.3.3 eccentricity()

```
double Digikam::Ellipsoid::eccentricity ( ) const
```

The eccentricity can alternately be computed from the equation:  $e = \sqrt{2f - f^2}$ .

### 9.494.3.4 inverseFlattening()

```
double Digikam::Ellipsoid::inverseFlattening ( ) const
```

Flattening is a value used to indicate how closely an ellipsoid approaches a spherical shape. The inverse flattening is related to the equatorial/polar radius by the formula

$$ivf = r_e / (r_e - r_p).$$

For perfect spheres (i.e. if `isSphere` returns `true`), the `DoublePOSITIVE_INFINITY` value is used.

#### Returns

The inverse flattening value.

### 9.494.3.5 isIvfDefinitive()

```
bool Digikam::Ellipsoid::isIvfDefinitive ( ) const
```

Some ellipsoids use the IVF as the defining value, and calculate the polar radius whenever asked. Other ellipsoids use the polar radius to calculate the IVF whenever asked. This distinction can be important to avoid floating-point rounding errors.

#### Returns

`true` if the inverse flattening is definitive, or `false` if the polar radius is definitive.

### 9.494.3.6 isSphere()

```
bool Digikam::Ellipsoid::isSphere ( ) const
```

The sphere is completely defined by the semi-major axis, which is the radius of the sphere.

#### Returns

`true` if the ellipsoid is degenerate and is actually a sphere.

### 9.494.3.7 orthodromicDistance()

```
double Digikam::Ellipsoid::orthodromicDistance (
    double x1,
    double y1,
    double x2,
    double y2 )
```

The orthodromic distance is the shortest distance between two points on a sphere's surface. The orthodromic path is always on a great circle. This is different from the loxodromic distance, which is a longer distance on a path with a constant direction on the compass.

#### Parameters

<code>x1</code>	Longitude of first point (in decimal degrees).
<code>y1</code>	Latitude of first point (in decimal degrees).
<code>x2</code>	Longitude of second point (in decimal degrees).
<code>y2</code>	Latitude of second point (in decimal degrees).

#### Returns

The orthodromic distance (in the units of this ellipsoid's axis).

### 9.494.3.8 radiusOfCurvature()

```
double Digikam::Ellipsoid::radiusOfCurvature (
    double latitude )
```

## Parameters

<i>latitude</i>	in degrees
-----------------	------------

**9.494.3.9 semiMajorAxis()**

```
double Digikam::Ellipsoid::semiMajorAxis ( ) const
```

This is the equatorial radius in axis linear unit.

## Returns

Length of semi-major axis.

**9.494.3.10 semiMinorAxis()**

```
double Digikam::Ellipsoid::semiMinorAxis ( ) const
```

This is the polar radius in axis linear unit.

## Returns

Length of semi-minor axis.

**9.494.3.11 SPHERE()**

```
Ellipsoid Digikam::Ellipsoid::SPHERE ( ) [static]
```

Spheres use a simpler algorithm for orthodromic distance computation, which may be faster and more robust.

**9.494.3.12 WGS84()**

```
Ellipsoid Digikam::Ellipsoid::WGS84 ( ) [static]
```

This ellipsoid is used in GPS systems and is the default for most `org.geotools` packages.

**9.494.4 Member Data Documentation****9.494.4.1 m\_inverseFlattening**

```
double Digikam::Ellipsoid::m_inverseFlattening = 0.0 [protected]
```

### 9.497.1.6 setUnpairedImages()

```
void Digikam::EmptyImageListProvider::setUnpairedImages (
    const QList< QImage * > & ) [override], [virtual]
```

Implements [Digikam::ImageListProvider](#).

### 9.497.1.7 size()

```
int Digikam::EmptyImageListProvider::size ( ) const [override], [virtual]
```

Implements [Digikam::ImageListProvider](#).

## 9.498 Digikam::EqualizeFilter Class Reference

Inheritance diagram for Digikam::EqualizeFilter:

### Public Member Functions

- **EqualizeFilter** (*DImg* \*const orgImage, const *DImg* \*const reflImage, QObject \*const parent=nullptr)
- **EqualizeFilter** (QObject \*const parent=nullptr)

- [FilterAction filterAction](#) () override  
*Returns the action description corresponding to currently set options.*
- [QString filterIdentifier](#) () const override  
*Return the identifier for this filter in the image history.*
- void [readParameters](#) (const [FilterAction](#) &action) override

## Public Member Functions inherited from [Digikam::DImgThreadedFilter](#)

- [DImgThreadedFilter](#) ([DImg](#) \*const orgImage, [QObject](#) \*const parent, const [QString](#) &name=[QString](#)())  
*Constructs a filter with all arguments (ready to use).*
- [DImgThreadedFilter](#) ([QObject](#) \*const parent=nullptr, const [QString](#) &name=[QString](#)())  
*Constructs a filter without argument.*
- virtual void [cancelFilter](#) ()  
*Cancel the threaded computation.*
- const [QString](#) & [filterName](#) ()
- int [filterVersion](#) () const
- [DImg](#) [getTargetImage](#) ()
- [QList](#)< int > [multithreadedSteps](#) (int stop, int start=0) const  
*This method return a list of steps to process parallelized operation in filter using QtConcurrents API.*
- virtual bool [parametersSuccessfullyRead](#) () const  
*Optional: error handling for readParameters.*
- virtual [QString](#) [readParametersError](#) (const [FilterAction](#) &actionThatFailed) const
- void [setFilterName](#) (const [QString](#) &name)
- void [setFilterVersion](#) (int version)  
*Replaying a filter action: Set the filter version.*
- void [setOriginalImage](#) (const [DImg](#) &orgImage)
- void [setupAndStartDirectly](#) (const [DImg](#) &orgImage, [DImgThreadedFilter](#) \*const master, int progress←Begin=0, int progressEnd=100)  
*Initializes the filter for use as a slave and directly starts computation (in-thread)*
- void [setupFilter](#) (const [DImg](#) &orgImage)  
*You need to call this and then start filter of you used the constructor not setting an original image.*
- virtual void [startFilter](#) ()  
*Start the threaded computation.*
- virtual void [startFilterDirectly](#) ()  
*Start computation of this filter, directly in this thread.*
- virtual [QList](#)< int > [supportedVersions](#) () const

## Public Member Functions inherited from [Digikam::DynamicThread](#)

- [DynamicThread](#) ([QObject](#) \*const parent=nullptr)  
*This class extends [QRunnable](#), so you have to reimplement virtual void [run\(\)](#).*
- [~DynamicThread](#) () override  
*The destructor calls [stop\(\)](#) and [wait\(\)](#), but if you, in your destructor, delete any data that is accessed by your [run\(\)](#) method, you must call [stop\(\)](#) and [wait\(\)](#) before yourself.*
- bool [isFinished](#) () const
- bool [isRunning](#) () const
- [QThread::Priority](#) [priority](#) () const
- void [setEmitSignals](#) (bool emitThem)
- void [setPriority](#) ([QThread::Priority](#) priority)  
*Sets the priority for this dynamic thread.*
- State [state](#) () const

### Static Public Member Functions

- static int **CurrentVersion** ()

- void **finished** ()
- bool **load** (const QString &path)
 

*ExifTool Command Methods. See exiftoolparser\_command.cpp for details.*
- bool **loadChunk** (const QString &path, bool copyToAll=false)
 

*Load Exif, Iptc, and Xmp chunk as Exiv2 EXV byte-array from a file.*
- bool **readableFormats** ()
 

*Return a list of readable file format extensions.*
- void **setExifToolProgram** (const QString &path)
- void **setOutputStream** (int cmdAction, const QByteArray &cmdOutputChannel, const QByteArray &cmdErrorChannel)
 

*Unit-test method to check ExifTool stream parsing.*
- bool **tagsDatabase** ()
 

*Return a list of all tags from ExifTool database.*
- bool **translateTags** (const QString &path, unsigned char transOps)
 

*Translate group of tags in file.*
- bool **translationsList** ()
 

*Return a list of available translations.*
- bool **version** ()
 

*Return the current version of ExifTool.*
- bool **writableFormats** ()
 

*Return a list of writable file format extensions.*

## Static Public Member Functions

- static **MetaEngine::TagsMap** **tagsDbToOrderedMap** (const **ExifToolData** &tagsDb)
 

*Helper conversion method to translate unordered tags database hash-table to ordered map.*

## 9.507.1 Member Typedef Documentation

### 9.507.1.1 ExifToolData

```
typedef QHash<QString, QVariantList> Digikam::ExifToolParser::ExifToolData
```

With `load()` method, the container is used to get a map of ExifTool tag name as key and tags properties as values: key = ExifTool Tag name (QString - ExifTool Group 0.1.2.4.6) See -G Exiftool option ( [https://exiftool.org/exiftool\\_pod.html#Input-output-text-formatting](https://exiftool.org/exiftool_pod.html#Input-output-text-formatting)). values = ExifTool Tag value (QString). ExifTool Tag type (QString). ExifTool Tag description (QString). ExifTool Tag numerical value (QString) - available if any .

With `loadChunk()` method, the container is used to get a EXV chunk as value: key = "EXV" (QString). value = the Exiv2 metadata container (QByteArray).

With `applyChanges()` method, the container is used as argument to store tuple of ExifTool tag name as key and tag value: key = ExifTool tag name (QString). value = ExifTool Tag value (QString).

With `readableFormats()` method, the container is used to get a list of upper-case file format extensions supported by ExifTool for reading. key = "READ\_FORMAT" (QString). value = list of pairs (ext,desc) (QStringList)

With `writableFormats()` method, the container is used to get a list of upper-case file format extensions supported by ExifTool for writing. key = "WRITE\_FORMAT" (QString). value = list of pairs (ext,desc) (QStringList).

With `translationsList()` method, the container is used to get a list of ExifTool languages available for translations. key = "TRANSLATIONS\_LIST" (QString). value = list of languages as strings (aka fr, en, de, es, etc.) (QStringList).

With `tagsDatabase()` method, the container is used as argument to store tuple of ExifTool tag name as key and tag description: key = ExifTool tag name (QString). values = ExifTool Tag description (QString). ExifTool Tag type (QString). ExifTool Tag writable (QString).

## 9.507.2 Member Function Documentation

### 9.507.2.1 applyChanges() [1/2]

```
bool Digikam::ExifToolParser::applyChanges (
    const QString & path,
    const ExifToolData & newTags )
```

Tags can already exists in target file or new ones can be created. To remove a tag, pass an empty string as value.

#### Parameters

<i>path</i>	is the target files to change.
<i>newTags</i>	is the list of tag properties.

### 9.507.2.2 applyChanges() [2/2]

```
bool Digikam::ExifToolParser::applyChanges (
    const QString & path,
```

```

    const QString & exvTempFile,
    bool hasExif = true,
    bool hasXmp = true,
    bool hasCSet = false )

```

Tags can already exists in target file or new ones can be created.

#### Parameters

<i>path</i>	is the target files to change.
<i>exvTempFile</i>	is the list of changes embedded in EXV container.
<i>hasExif</i>	if the EXV container has Exif metadata restore MarkerNotes.
<i>hasXmp</i>	if the EXV container has Xmp metadata.
<i>hasCSet</i>	if the EXV container has characters set information.

#### 9.507.2.3 applyMetadataFile()

```

bool Digikam::ExifToolParser::applyMetadataFile (
    const QString & path,
    const QString & meta )

```

#### Parameters

<i>path</i>	is the target file to change.
<i>meta</i>	is the metadata file.

#### 9.507.2.4 changeTimestamps()

```

bool Digikam::ExifToolParser::changeTimestamps (
    const QString & path,
    const QDateTime & dateTime )

```

#### Parameters

<i>path</i>	is the target file to change.
<i>dateTime</i>	is the date/time.

#### 9.507.2.5 copyTags()

```

bool Digikam::ExifToolParser::copyTags (
    const QString & src,
    const QString & dst,
    unsigned char copyOps,
    unsigned char writeModes = ExifToolProcess::ALL_MODES )

```

#### Parameters

<i>src</i>	must be a readable file format supported by ExifTool.
------------	---

## Parameters

<i>dst</i>	must be a writable file format supported by ExifTool.
<i>copyOps</i>	is a OR combination of <a href="#">ExifToolProcess::CopyTagsSource</a> values.
<i>writeModes</i>	is a OR combination of <a href="#">ExifToolProcess::WritingTagsMode</a> values.

**9.507.2.6 load()**

```
bool Digikam::ExifToolParser::load (
    const QString & path )
```

Load all metadata with ExifTool from a file. Use `currentData()` to get the ExifTool map.

**9.507.2.7 loadChunk()**

```
bool Digikam::ExifToolParser::loadChunk (
    const QString & path,
    bool copyToAll = false )
```

Use `currentData()` to get the container.

**9.507.2.8 readableFormats()**

```
bool Digikam::ExifToolParser::readableFormats ( )
```

Use `currentData()` to get the container as `QStringList`.

**9.507.2.9 tagsDatabase()**

```
bool Digikam::ExifToolParser::tagsDatabase ( )
```

Use `currentData()` to get the container.

**Warning**

: This method get whole ExifTool database in XML format and take age.

**9.507.2.10 tagsDbToOrderedMap()**

```
MetaEngine::TagsMap Digikam::ExifToolParser::tagsDbToOrderedMap (
    const ExifToolData & tagsDb ) [static]
```

Tag are formatted like this:

```
EXIF.IFD0.Image.XResolution EXIF.IFD0.Image.YCbCrCoefficients EXIF.IFD0.Image.YCbCrPositioning EXIF.IFD0.Image.YCbCrSubSampling EXIF.IFD0.Image.YClipPathUnits EXIF.IFD0.Image.YPosition EXIF.IFD0.Image.YResolution FITS.FITS.Image.Author FITS.FITS.Image.Background FITS.FITS.Image.CreateDate FITS.FITS.Image.Instrument FITS.FITS.Image.Object FITS.FITS.Image.ObservationDate
```

**9.507.2.11 translateTags()**

```
bool Digikam::ExifToolParser::translateTags (
    const QString & path,
    unsigned char transOps )
```

## Parameters

<i>path</i>	must be a readable file format supported by ExifTool.
<i>transOps</i>	is a OR combination of <a href="#">ExifToolProcess::TranslateTagsOps</a> values.

**9.507.2.12 translationsList()**

```
bool Digikam::ExifToolParser::translationsList ( )
```

Use `currentData()` to get the container as `QStringList`.

**9.507.2.13 version()**

```
bool Digikam::ExifToolParser::version ( )
```

Use `currentData()` to get the container as `QString`.

**9.507.2.14 writableFormats()**

```
bool Digikam::ExifToolParser::writableFormats ( )
```

Use `currentData()` to get the container as `QStringList`.

## 9.508.1 Member Enumeration Documentation

### 9.508.1.1 Action

enum `Digikam::ExifToolProcess::Action`

#### Enumerator

<code>LOAD_METADATA</code>	Load all metadata from a file with ExifTool.
<code>LOAD_CHUNKS</code>	Load Exif, Iptc, and Xmp chunks from a file as byte-array for <a href="#">MetaEngine</a> .
<code>APPLY_CHANGES</code>	Apply tag changes in a file with ExifTool.
<code>APPLY_CHANGES_EXV</code>	Apply tag changes in a file with ExifTool using an EXV container.
<code>APPLY_METADATA_FILE</code>	Apply a metadata file to a file with ExifTool.
<code>CHANGE_TIMESTAMPS</code>	Change all timestamps in a file with ExifTool.
<code>READ_FORMATS</code>	Return the list of readable ExifTool file formats.
<code>WRITE_FORMATS</code>	Return the list of writable ExifTool file formats.
<code>TRANSLATIONS_LIST</code>	List of ExifTool languages available for translations.
<code>TAGS_DATABASE</code>	List of ExifTool tags from database.
<code>VERSION_STRING</code>	Return the ExifTool version as string.
<code>COPY_TAGS</code>	Copy tags from one file to another one. See <code>CopyTagsSource</code> enum for details.
<code>TRANS_TAGS</code>	Translate tags in file. See <code>TranslateTagsOps</code> enum for details.
<code>NO_ACTION</code>	Last value from this list. Do nothing.

### 9.508.1.2 CopyTagsSource

enum `Digikam::ExifToolProcess::CopyTagsSource`

#### Enumerator

<code>COPY_EXIF</code>	Copy all Exif Tags from source file.
<code>COPY_MAKERNOTES</code>	Copy all Makernotes tags from source file.
<code>RESTORE_PREVIEW</code>	Restore preview image from source file.
<code>COPY_IPTC</code>	Copy all Iptc tags from source file.
<code>COPY_XMP</code>	Copy all Xmp tags from source file.
<code>COPY_ICC</code>	Copy ICC profile from source file.
<code>COPY_ALL</code>	Copy all tags from source file.
<code>COPY_NONE</code>	No copy operation.

### 9.508.1.3 TranslateTagsOps

enum `Digikam::ExifToolProcess::TranslateTagsOps`

#### Enumerator

<code>TRANS_ALL_XMP</code>	Translate all existing Tags from source file to Xmp.
<code>TRANS_ALL_IPTC</code>	Translate all existing Tags from source file to Iptc.
<code>TRANS_ALL_EXIF</code>	Translate all existing Tags from source file to Exif.

### 9.508.1.4 WritingTagsMode

```
enum Digikam::ExifToolProcess::WritingTagsMode
```

Enumerator

WRITE_EXISTING_TAGS	Overwrite existing tags.
CREATE_NEW_TAGS	Create new tags.
CREATE_NEW_GROUPS	Create new groups if necessary.

## 9.508.2 Constructor & Destructor Documentation

### 9.508.2.1 ~ExifToolProcess()

```
Digikam::ExifToolProcess::~~ExifToolProcess ( )
```

Note that this function will not return until the process is terminated.

## 9.508.3 Member Function Documentation

### 9.508.3.1 command()

```
int Digikam::ExifToolProcess::command (
    const QByteArrayList & args,
    Action ac )
```

This function can be called from another thread. Return 0: ExifTool not running, write channel is closed or args is empty.

### 9.508.3.2 initExifTool()

```
void Digikam::ExifToolProcess::initExifTool ( )
```

This function cannot be called from another thread.

### 9.508.3.3 setExifToolProgram()

```
void Digikam::ExifToolProcess::setExifToolProgram (
    const QString & etExePath )
```

This function can be called from another thread.

### 9.508.3.4 shutDownExifTool()

```
void Digikam::ExifToolProcess::shutDownExifTool ( )
```

This function cannot be called from another thread.

### 9.508.3.5 waitForExifToolResult()

```
ExifToolProcess::Result Digikam::ExifToolProcess::waitForExifToolResult (
    int cmdId ) const
```

Returns the [ExifToolProcess](#) result.

## 9.509 Digikam::ExifToolProcess::Result Class Reference

### Public Attributes

- int **cmdAction** = [ExifToolProcess::NO\\_ACTION](#)
- int **cmdNumber** = 0
- int **cmdStatus** = [ExifToolProcess::COMMAND\\_RESULT](#)
- int **elapsed** = 0
- QByteArray **output**
- bool **waitError** = false

## 9.510 Digikam::ExifToolThread Class Reference

Inheritance diagram for Digikam::ExifToolThread:

## 9.512.1 Member Function Documentation

### 9.512.1.1 getMetadataTitle()

```
QString Digikam::ExifWidget::getMetadataTitle ( ) const [override], [virtual]
```

Implements [Digikam::MetadataWidget](#).

### 9.512.1.2 getTagDescription()

```
QString Digikam::ExifWidget::getTagDescription (
    const QString & key ) [override], [virtual]
```

Reimplemented from [Digikam::MetadataWidget](#).

### 9.512.1.3 getTagTitle()

```
QString Digikam::ExifWidget::getTagTitle (
    const QString & key ) [override], [virtual]
```

Reimplemented from [Digikam::MetadataWidget](#).

### 9.512.1.4 loadFromURL()

```
bool Digikam::ExifWidget::loadFromURL (
    const QUrl & url ) [override], [virtual]
```

Implements [Digikam::MetadataWidget](#).

## 9.513 Digikam::ExposureDetector Class Reference

Inheritance diagram for Digikam::ExposureDetector:

### Public Member Functions

- float [detect](#) (const cv::Mat &image) const override

### Public Member Functions inherited from [Digikam::AbstractDetector](#)

- **AbstractDetector** (QObject \*const parent=nullptr)

### Additional Inherited Members

### Static Public Member Functions inherited from [Digikam::AbstractDetector](#)

- static cv::Mat **prepareForDetection** (const [DImg](#) &inputImage)

*NOTE: Maybe this function will move to `read_image()` of `imagequalityparser` in case all detectors of IQS use `cv::Mat`.*

## 9.513.1 Member Function Documentation

### 9.513.1.1 detect()

```
float Digikam::ExposureDetector::detect (
    const cv::Mat & image ) const [override], [virtual]
```

Implements [Digikam::AbstractDetector](#).

## 9.514 Digikam::ExposureSettingsContainer Class Reference

### Public Attributes

- bool [exposureIndicatorMode](#) = true  
*If this option is true, over and under exposure indicators will be displayed only when pure white and pure black color matches, as all color components match the condition in the same time.*
- QColor [overExposureColor](#) = Qt::black
- bool [overExposureIndicator](#) = false
- float [overExposurePercent](#) = 1.0
- QColor [underExposureColor](#) = Qt::white
- bool [underExposureIndicator](#) = false
- float [underExposurePercent](#) = 1.0

## 9.514.1 Member Data Documentation

### 9.514.1.1 exposureIndicatorMode

```
bool Digikam::ExposureSettingsContainer::exposureIndicatorMode = true
```

Else indicators are turn on when one of color components match the condition.

## 9.515 Digikam::FaceClassifier Class Reference

Inheritance diagram for Digikam::FaceClassifier:

### Public Member Functions

- QList< [Identity](#) > **identities** () const
- [Identity](#) **identity** (int id) const
- QList< int > **identityIds** () const
- int **insertFaceVector** (const cv::Mat &faceEmbedding, const int label, const QString &hash) const
  - insertFaceVector: insert a new face embedding to database.*
- bool **integrityCheck** ()
  - Returns true if the integrity of the database is preserved.*
- bool **removeFaceVector** (const int id) const
  - removeFaceVector: remove a face embedding from the database.*
- bool **removeFaceVector** (const QString &hash) const
  - removeFaceVector: remove a face embedding from the database.*
- [BdEngineBackend::QueryState](#) **setSetting** (const QString &keyword, const QString &value)
- QString **setting** (const QString &keyword) const
- cv::Ptr< cv::ml::TrainData > **trainData** () const
  - trainData: extract train data from database.*
- void **updateIdentity** (const [Identity](#) &p)
- void **vacuum** ()
  - Shrinks the database.*

## 9.517.1 Member Function Documentation

### 9.517.1.1 clearDNNTraining()

```
void Digikam::FaceDb::clearDNNTraining (
    const QList< int > & identities )
```

#### Parameters

<i>identities</i>	in the database.
-------------------	------------------

### 9.517.1.2 insertFaceVector()

```
int Digikam::FaceDb::insertFaceVector (
    const cv::Mat & faceEmbedding,
    const int label,
    const QString & hash ) const
```

#### Parameters

<i>faceEmbedding</i>	
<i>label</i>	
<i>hash</i>	

#### Returns

id of newly inserted entry.

### 9.517.1.3 removeFaceVector() [1/2]

```
bool Digikam::FaceDb::removeFaceVector (
    const int id ) const
```

#### Parameters

<i>id</i>	the nodeId (row id) to remove.
-----------	--------------------------------

#### Returns

bool

### 9.517.1.4 removeFaceVector() [2/2]

```
bool Digikam::FaceDb::removeFaceVector (
    const QString & hash ) const
```

## Parameters

<i>hash</i>	the removeHash (removeHash) to remove.
-------------	--

## Returns

bool

## 9.517.1.5 trainData()

```
cv::Ptr< cv::ml::TrainData > Digikam::FaceDb::trainData ( ) const
```

## Returns

the train data instance.

## 9.518 Digikam::FaceDbAccess Class Reference

### Public Member Functions

- [FaceDbAccess](#) ()  
*This class is written in analogy to [CoreDbAccess](#) (some features stripped off).*
- [FaceDbBackend](#) \* **backend** () const
- [FaceDb](#) \* **db** () const
- const QString & **lastError** () const
- void [setLastError](#) (const QString &error)  
*Set the "last error" message.*

### Static Public Member Functions

- static bool **checkReadyForUse** ([InitializationObserver](#) \*const observer)
- static void **cleanUpDatabase** ()
- static void **initDbEngineErrorHandler** ([DbEngineErrorHandler](#) \*const errorHandler)
- static bool **isInitialized** ()
- static [DbEngineParameters](#) **parameters** ()
- static void **setParameters** (const [DbEngineParameters](#) &parameters, [FaceScanSettings::FaceRecognitionModel](#) recognizeModel)

### Friends

- class **FaceDbAccessUnlock**

## 9.518.1 Constructor & Destructor Documentation

### 9.518.1.1 FaceDbAccess()

```
Digikam::FaceDbAccess::FaceDbAccess ( )
```

For documentation, see `coredbaccess.h`

## 9.518.2 Member Function Documentation

### 9.518.2.1 setLastError()

```
void Digikam::FaceDbAccess::setLastError (
    const QString & error )
```

This method is not for public use.

## 9.519 Digikam::FaceDbAccessUnlock Class Reference

### Public Member Functions

- [FaceDbAccessUnlock](#) ()  
*Acquire an object of this class if you want to assure that the [FaceDbAccess](#) is not held during the lifetime of the object.*
- [FaceDbAccessUnlock](#) ([FaceDbAccess](#) \*const access)

## 9.519.1 Constructor & Destructor Documentation

### 9.519.1.1 FaceDbAccessUnlock()

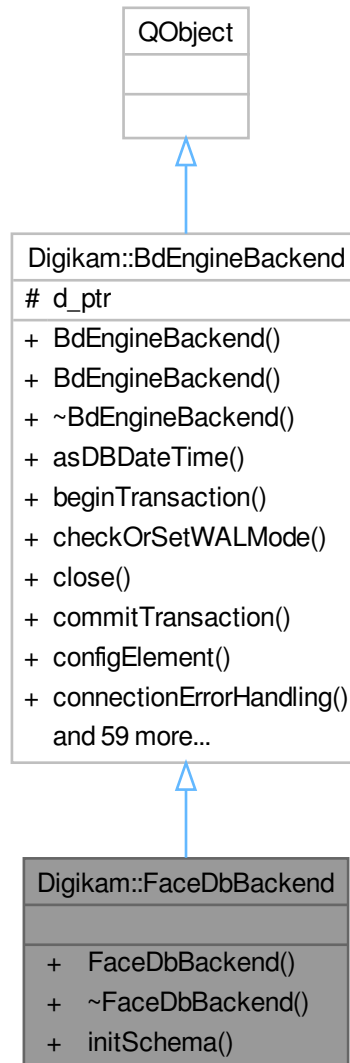

```
Digikam::FaceDbAccessUnlock::FaceDbAccessUnlock ( )
```

At creation, the lock is obtained shortly, then all locks are released. At destruction, all locks are acquired again. If you need to access any locked structures during lifetime, acquire a new [FaceDbAccess](#).

## 9.520 Digikam::FaceDbBackend Class Reference

Inheritance diagram for Digikam::FaceDbBackend:

### Public Member Functions

- **FaceDbBackend** ([DbEngineLocking](#) \*const locking, const QString &backendName=QLatin1String("face← Database-"))
- bool [initSchema](#) ([FaceDbSchemaUpdater](#) \*const updater)

*Initialize the database schema to the current version, carry out upgrades if necessary.*

## Public Member Functions inherited from [Digikam::BdEngineBackend](#)

- [BdEngineBackend](#) (const QString &backendName, [DbEngineLocking](#) \*const locking)
 

*Creates a database backend.*
- **BdEngineBackend** (const QString &backendName, [DbEngineLocking](#) \*const locking, [BdEngineBackend](#)←Private &dd)
- QDateTime [asDBDateTime](#) (const QDateTime &dateTime) const
 

*Depending on the database backend return a local or UTC date format.*
- [BdEngineBackend::QueryState](#) **beginTransaction** ()
 

*Begin a database transaction.*
- bool [checkOrSetWALMode](#) ()
 

*Check or set WAL mode for SQLite database if enabled in settings.*
- void [close](#) ()
 

*Close the database connection.*
- [BdEngineBackend::QueryState](#) **commitTransaction** ()
 

*Commit the current database transaction.*
- [DbEngineConfigSettings](#) **configElement** () const
 

*Return config read from XML, corresponding to this backend's database type.*
- bool [connectionErrorHandling](#) (int retries)
 

*Called when an attempted connection to the database failed.*
- [DbEngineSqlQuery](#) **copyQuery** (const [DbEngineSqlQuery](#) &old)
 

*Creates a faithful copy of the passed query, with the current db connection.*
- DbType **databaseType** () const
 

*Return the database type.*
- bool **exec** ([DbEngineSqlQuery](#) &query)
 

*Calls exec/execBatch on the query, and handles debug output if something went wrong.*
- bool **execBatch** ([DbEngineSqlQuery](#) &query)
- [QueryState](#) **execDBAction** (const [DbEngineAction](#) &action, const QMap< QString, QVariant > &bindingMap, QList< QVariant > \*const values=nullptr, QVariant \*const lastInsertId=nullptr)
 

*Performs the database action on the current database.*
- [QueryState](#) **execDBAction** (const [DbEngineAction](#) &action, QList< QVariant > \*const values=nullptr, QVariant \*const lastInsertId=nullptr)
 

*Performs the database action on the current database.*
- [QueryState](#) **execDBAction** (const QString &action, const QMap< QString, QVariant > &bindingMap, QList< QVariant > \*const values=nullptr, QVariant \*const lastInsertId=nullptr)
 

*Performs the database action on the current database.*
- [QueryState](#) **execDBAction** (const QString &action, QList< QVariant > \*const values=nullptr, QVariant \*const lastInsertId=nullptr)
 

*Performs the database action on the current database.*
- QSqlQuery [execDBActionQuery](#) (const [DbEngineAction](#) &action, const QMap< QString, QVariant > &bindingMap)
 

*Performs the database action on the current database.*
- QSqlQuery **execDBActionQuery** (const QString &action, const QMap< QString, QVariant > &bindingMap)
- [QueryState](#) **execDirectSql** (const QString &query)
 

*Calls exec on the query, and handles debug output if something went wrong.*
- [QueryState](#) **execDirectSqlWithResult** (const QString &query, QList< QVariant > \*const values=nullptr, QVariant \*const lastInsertId=nullptr)
 

*Calls exec on the query, and handles debug output if something went wrong.*
- [DbEngineSqlQuery](#) **execQuery** (const QString &sql)
 

*Executes the statement and returns the query object.*
- [DbEngineSqlQuery](#) **execQuery** (const QString &sql, const QList< QVariant > &boundValues)
- [DbEngineSqlQuery](#) **execQuery** (const QString &sql, const QMap< QString, QVariant > &bindingMap)
 

*Method which accept a hashmap with key, values which are used for named binding.*
- [DbEngineSqlQuery](#) **execQuery** (const QString &sql, const QVariant &boundValue1)

- [DbEngineSqlQuery](#) **execQuery** (const QString &sql, const QVariant &boundValue1, const QVariant &boundValue2)
- [DbEngineSqlQuery](#) **execQuery** (const QString &sql, const QVariant &boundValue1, const QVariant &boundValue2, const QVariant &boundValue3)
- [DbEngineSqlQuery](#) **execQuery** (const QString &sql, const QVariant &boundValue1, const QVariant &boundValue2, const QVariant &boundValue3, const QVariant &boundValue4)
- void **execQuery** ([DbEngineSqlQuery](#) &preparedQuery, const QList< QVariant > &boundValues)
- void **execQuery** ([DbEngineSqlQuery](#) &preparedQuery, const QVariant &boundValue1)
  - Binds the values and executes the prepared query.*
- void **execQuery** ([DbEngineSqlQuery](#) &preparedQuery, const QVariant &boundValue1, const QVariant &boundValue2)
- void **execQuery** ([DbEngineSqlQuery](#) &preparedQuery, const QVariant &boundValue1, const QVariant &boundValue2, const QVariant &boundValue3)
- void **execQuery** ([DbEngineSqlQuery](#) &preparedQuery, const QVariant &boundValue1, const QVariant &boundValue2, const QVariant &boundValue3, const QVariant &boundValue4)

- [QueryState](#) **execSql** (const QString &sql, const QMap< QString, QVariant > &bindingMap, QList< QVariant > \*const values=nullptr, QVariant \*const lastInsertId=nullptr)
  - Method which accepts a map for named binding.*
- [QueryState](#) **execSql** (const QString &sql, const QVariant &boundValue1, const QVariant &boundValue2, const QVariant &boundValue3, const QVariant &boundValue4, QList< QVariant > \*const values=nullptr, QVariant \*const lastInsertId=nullptr)
- [QueryState](#) **execSql** (const QString &sql, const QVariant &boundValue1, const QVariant &boundValue2, const QVariant &boundValue3, QList< QVariant > \*const values=nullptr, QVariant \*const lastInsertId=nullptr)
- [QueryState](#) **execSql** (const QString &sql, const QVariant &boundValue1, const QVariant &boundValue2, QList< QVariant > \*const values=nullptr, QVariant \*const lastInsertId=nullptr)
- [QueryState](#) **execSql** (const QString &sql, const QVariant &boundValue1, QList< QVariant > \*const values=nullptr, QVariant \*const lastInsertId=nullptr)
- [QueryState](#) **execSql** (const QString &sql, QList< QVariant > \*const values=nullptr, QVariant \*const lastInsertId=nullptr)
  - Executes the SQL statement, and write the returned data into the values list.*
- [QueryState](#) **execSql** ([DbEngineSqlQuery](#) &preparedQuery, const QList< QVariant > &boundValues, QList< QVariant > \*const values=nullptr, QVariant \*const lastInsertId=nullptr)
- [QueryState](#) **execSql** ([DbEngineSqlQuery](#) &preparedQuery, const QVariant &boundValue1, const QVariant &boundValue2, const QVariant &boundValue3, const QVariant &boundValue4, QList< QVariant > \*const values=nullptr, QVariant \*const lastInsertId=nullptr)
- [QueryState](#) **execSql** ([DbEngineSqlQuery](#) &preparedQuery, const QVariant &boundValue1, const QVariant &boundValue2, const QVariant &boundValue3, QList< QVariant > \*const values=nullptr, QVariant \*const lastInsertId=nullptr)
- [QueryState](#) **execSql** ([DbEngineSqlQuery](#) &preparedQuery, const QVariant &boundValue1, const QVariant &boundValue2, QList< QVariant > \*const values=nullptr, QVariant \*const lastInsertId=nullptr)
- [QueryState](#) **execSql** ([DbEngineSqlQuery](#) &preparedQuery, const QVariant &boundValue1, QList< QVariant > \*const values=nullptr, QVariant \*const lastInsertId=nullptr)
- [QueryState](#) **execSql** ([DbEngineSqlQuery](#) &preparedQuery, QList< QVariant > \*const values=nullptr, QVariant \*const lastInsertId=nullptr)
- [QueryState](#) **execUpsertDBAction** (const [DbEngineAction](#) &action, const QVariant &id, const QStringList &fieldNames, const QList< QVariant > &values)
  - Performs a special DBAction that is usually needed to "INSERT or UPDATE" entries in a table.*
- [QueryState](#) **execUpsertDBAction** (const QString &action, const QVariant &id, const QStringList &fieldNames, const QList< QVariant > &values)
- [DbEngineAction](#) **getDBAction** (const QString &actionName) const
  - Returns a database action with name, specified in actionName, for the current database.*
- [DbEngineSqlQuery](#) **getQuery** ()

- Creates an empty query object waiting for the statement.*

  - [QueryState](#) [handleQueryResult](#) ([DbEngineSqlQuery](#) &query, [QList](#)< [QVariant](#) > \*const values, [QVariant](#) \*const lastInsertId)
- Checks if there was a connection error.*

  - bool [isCompatible](#) (const [DbEngineParameters](#) &parameters)

*Checks if the parameters can be used for this database backend.*
- bool [isInTransaction](#) () const

*Returns if the database is in a different thread in a transaction.*
- bool [isOpen](#) () const
  - bool [isReady](#) () const
  - [QString](#) [lastError](#) ()

*Returns a description of the last error that occurred on this database.*
- [QSqlError](#) [lastSQLError](#) ()

*Returns the last error that occurred on this database.*
- int [maximumBoundValues](#) () const

*Returns the maximum number of bound parameters allowed per query.*
- bool [open](#) (const [DbEngineParameters](#) &parameters)

*Open the database connection.*
- [DbEngineSqlQuery](#) [prepareQuery](#) (const [QString](#) &sql)

*Creates a query object prepared with the statement, waiting for bound values.*
- bool [queryErrorHandling](#) ([DbEngineSqlQuery](#) &query, int retries)

*Called with a failed query.*
- [QList](#)< [QVariant](#) > [readToList](#) ([DbEngineSqlQuery](#) &query)

*Reads data of returned result set into a list which is returned.*
- void [rollbackTransaction](#) ()

*Rollback the current database transaction.*
- void [setDbEngineErrorHandler](#) ([DbEngineErrorHandler](#) \*const handler)

*Add a [DbEngineErrorHandler](#).*
- void [setForeignKeyChecks](#) (bool check)

*Enables or disables FOREIGN\_KEY\_CHECKS for the database.*
- [Status](#) [status](#) () const

*Returns the current status of the database backend.*
- [QStringList](#) [tables](#) ()

*Returns a list with the names of tables in the database.*
- bool [transactionErrorHandling](#) (const [QSqlError](#) &[lastError](#), int retries)

### Additional Inherited Members

### Public Types inherited from [Digikam::BdEngineBackend](#)

- enum [DbType](#) { [SQLite](#) , [MySQL](#) }
- enum [QueryOperationStatus](#) { [ExecuteNormal](#) , [Wait](#) , [AbortQueries](#) }
- enum [QueryStateEnum](#) { [NoErrors](#) , [SQLError](#) , [ConnectionError](#) }
- enum [Status](#) { [Unavailable](#) , [Open](#) , [OpenSchemaChecked](#) }

### Protected Attributes inherited from [Digikam::BdEngineBackend](#)

## 9.520.1 Member Function Documentation

### 9.520.1.1 initSchema()

```
bool Digikam::FaceDbBackend::initSchema (
    FaceDbSchemaUpdater *const updater )
```

Shall only be called from the thread that called `open()`.

## 9.521 Digikam::FaceDbOperationGroup Class Reference

When you intend to execute a number of write operations to the database, group them while holding a `FaceDbOperationGroup`.

### Public Member Functions

- **FaceDbOperationGroup** ()  
*Retrieve a `FaceDbAccess` object each time when constructing and destructing.*
- **FaceDbOperationGroup** (`FaceDbAccess` \*const dbAccess)  
*Use an existing `FaceDbAccess` object, which must live as long as this object exists.*
- void **allowLift** ()  
*Allows to `lift()`.*
- void **lift** ()  
*This will - if a transaction is held - commit the transaction and acquire a new one.*
- void **resetTime** ()  
*Resets to 0 the time used by `allowLift()`.*
- void **setMaximumTime** (int msec)

### 9.521.1 Detailed Description

For some database systems (SQLite), keeping a transaction across write operations occurring in short time results in enormous speedup (800x). For system that do not need this optimization, this class is a no-op.

## 9.521.2 Member Function Documentation

### 9.521.2.1 allowLift()

```
void Digikam::FaceDbOperationGroup::allowLift ( )
```

The transaction will be lifted if the time set by `setMaximumTime()` has expired.

### 9.521.2.2 lift()

```
void Digikam::FaceDbOperationGroup::lift ( )
```

This may improve concurrent access.

## 9.522 Digikam::FaceDbSchemaUpdater Class Reference

- static QList< QRect > **toAbsoluteRects** (const QList< QRectF > &relativeRects, const QSize &size)
- static QRectF **toRelativeRect** (const QRect &absoluteRect, const QSize &size)
- static QList< QRectF > **toRelativeRects** (const QList< QRect > &absoluteRects, const QSize &size)

### 9.523.1 Constructor & Destructor Documentation

#### 9.523.1.1 FaceDetector()

```
Digikam::FaceDetector::FaceDetector ( )
```

This class provides shallow copying The class is fully reentrant (a single object and its copies are not thread-safe). Deferred creation is guaranteed, that means creation of a [FaceDetector](#) object is cheap, the expensive creation of the detection backend is performed when `detectFaces` is called for the first time.

## 9.523.2 Member Function Documentation

### 9.523.2.1 detectFaces() [1/2]

```
QList< QRectF > Digikam::FaceDetector::detectFaces (
    const QImage & image,
    const QSize & originalSize = QSize() )
```

Return a list with regions possibly containing faces. If the image has been downscaled anywhere in the process, provide the original size of the image as this may be of importance in the detection process.

Found faces are returned in relative coordinates.

### 9.523.2.2 detectFaces() [2/2]

```
QList< QRectF > Digikam::FaceDetector::detectFaces (
    const QImage & image,
    const QSize & originalSize = QSize() )
```

Return a list with regions possibly containing faces. If the image has been downscaled anywhere in the process, provide the original size of the image as this may be of importance in the detection process.

Found faces are returned in relative coordinates.

### 9.523.2.3 recommendedImageSize()

```
int Digikam::FaceDetector::recommendedImageSize (
    const QSize & availableSize = QSize() ) const
```

Larger images can be passed, but may be downscaled.

### 9.523.2.4 setParameter()

```
void Digikam::FaceDetector::setParameter (
    const QString & parameter,
    const QVariant & value )
```

Available parameters:

"speed" vs. "accuracy", 0..1, float "sensitivity" vs. "specificity", 0..1, float.

For both pairs: a = 1-b, you can set either. The first pair changes the ROC curve in a trade for computing time. The second pair moves on a given ROC curve towards more false positives, or more missed faces.

## 9.524 Digikam::FaceGroup Class Reference

Inheritance diagram for Digikam::FaceGroup:

### Public Slots

- void `aboutToSetInfo` (const `ItemInfo` &info)  
*Prepares to load a new info.*

- void **addFace** ()  
*Enters a special state where by click + drag a new face can be created.*
- void **markAllAsIgnored** ()  
*Mark all unconfirmed faces as ignored on the current image.*
- void **rejectAll** ()  
*Rejects (clears) all faces on the current image.*
- void **setInfo** (const [ItemInfo](#) &info)  
*Sets the current [ItemInfo](#).*
- void **setVisible** (bool visible)  
*Shows or hides the frames.*
- void **setVisibleItem** ([RegionFrameItem](#) \*item)

### Public Member Functions

- **FaceGroup** ([GraphicsDImgView](#) \*const view)  
*Constructs a new face group, managing [RegionFrameItems](#) for faces of a particular image, displayed on a [GraphicsDImgView](#).*
- bool **acceptsMouseClicked** (const [QPointF](#) &scenePos)
- bool **autoSuggest** () const
- [RegionFrameItem](#) \* **closestItem** (const [QPointF](#) &p, qreal \*const manhattanLength=nullptr) const  
*Returns the item in this group closest to scene position p.*
- void **enterEvent** ([QEvent](#) \*)
- bool **hasUnconfirmed** ()  
*Returns a boolean whether there is at least one unconfirmed face in the group or not.*
- bool **hasVisibleItems** () const
- [ItemInfo](#) **info** () const
- bool **isVisible** () const
- void **itemHoverEnterEvent** ([QGraphicsSceneHoverEvent](#) \*event)
- void **itemHoverLeaveEvent** ([QGraphicsSceneHoverEvent](#) \*event)
- void **itemHoverMoveEvent** ([QGraphicsSceneHoverEvent](#) \*event)
- [QList](#)< [RegionFrameItem](#) \* > **items** () const
- void **leaveEvent** ([QEvent](#) \*)
- void **setAutoSuggest** (bool doAutoSuggest)  
*Auto suggest applies if an image has not been scanned, or an unknown face is registered.*
- void **setShowOnHover** (bool show)  
*Even if visible() is false, show the item under the mouse cursor.*
- bool **showOnHover** () const

### Protected Slots

- void **itemStateChanged** (int)
- void **slotAddItemFinished** (const [QRectF](#) &rect)
- void **slotAddItemMoving** (const [QRectF](#) &rect)
- void **slotAddItemStarted** (const [QPointF](#) &pos)
- void **slotAlbumRenamed** ([Album](#) \*album)
- void **slotAlbumsUpdated** (int type)
- void **slotAssigned** (const [TaggingAction](#) &action, const [ItemInfo](#) &info, const [QVariant](#) &faceIdentifier)
- void **slotCancelAddItem** ()
- void **slotFocusRandomFace** ()
- void **slotIgnored** (const [ItemInfo](#) &info, const [QVariant](#) &faceIdentifier)
- void **slotIgnoredClicked** (const [ItemInfo](#) &info, const [QVariant](#) &faceIdentifier)
- void **slotLabelClicked** (const [ItemInfo](#) &info, const [QVariant](#) &faceIdentifier)
- void **slotRejected** (const [ItemInfo](#) &info, const [QVariant](#) &faceIdentifier)
- void **startAutoSuggest** ()

## Protected Member Functions

- void **clear** ()
- void **load** ()

## Properties

- bool **visible**

## 9.524.1 Member Function Documentation

### 9.524.1.1 aboutToSetInfo

```
void Digikam::FaceGroup::aboutToSetInfo (
    const ItemInfo & info ) [slot]
```

Closes the face group for editing. Pass a null info if about to close.

### 9.524.1.2 closestItem()

```
RegionFrameItem * Digikam::FaceGroup::closestItem (
    const QPointF & p,
    qreal *const manhattanLength = nullptr ) const
```

If given, manhattanLength is set to the manhattan length between p and the closest point of the returned item's bounding rectangle. In particular, if p is inside the item's rectangle, manhattanLength is 0.

### 9.524.1.3 setAutoSuggest()

```
void Digikam::FaceGroup::setAutoSuggest (
    bool doAutoSuggest )
```

In this case, a new scan will be triggered.

## 9.527.1 Member Enumeration Documentation

### 9.527.1.1 FilterMode

enum [Digikam::FacePipeline::FilterMode](#)

#### Enumerator

ScanAll	Will read any given image.
SkipAlreadyScanned	Will skip any image that is already marked as scanned.
ReadUnconfirmedFaces	Will read unconfirmed faces for recognition.
ReadFacesForTraining	Will read faces marked for training.
ReadConfirmedFaces	Will read faces which are confirmed.

### 9.527.1.2 WriteMode

enum [Digikam::FacePipeline::WriteMode](#)

## Enumerator

NormalWrite	Write results. Merge with existing entries.
OverwriteAllFaces	Add new results. Previous all results will be cleared.
OverwriteUnconfirmed	Add new results. Previous unconfirmed results will be cleared.

## 9.527.2 Member Function Documentation

### 9.527.2.1 confirm

```
FaceTagsIface Digikam::FacePipeline::confirm (
    const ItemInfo & info,
    const FaceTagsIface & face,
    int assignedTagId = 0,
    const TagRegion & assignedRegion = TagRegion() ) [slot]
```

Pass the original face, and additionally tag id or region if they changed. Returns the confirmed face entry immediately purely for convenience, it is not yet in the database (connect to signal [processed\(\)](#) to react when the processing finished). If a trainer is plugged, the face will be trained.

### 9.527.2.2 editRegion

```
FaceTagsIface Digikam::FacePipeline::editRegion (
    const ItemInfo & info,
    const DImg & image,
    const FaceTagsIface & databaseFace,
    const TagRegion & newRegion ) [slot]
```

Does not care for training atm.

### 9.527.2.3 editTag

```
FaceTagsIface Digikam::FacePipeline::editTag (
    const ItemInfo & info,
    const FaceTagsIface & databaseFace,
    int newTagId ) [slot]
```

Used to Reject Facial Recognition suggestions, since the tag needs to be converted from Unconfirmed to Unknown.

### 9.527.2.4 plugDatabaseFilter()

```
void Digikam::FacePipeline::plugDatabaseFilter (
    FilterMode mode )
```

1) Call any of the four plug...() methods. See below for supported combinations. 2) Call construct() to set up the pipeline.

- Database filter: Prepares database records and/or filters out items. See FilterMode for specification.
- Preview loader: If no preview loader is plugged, you must provide a [DImg](#) for face detection and recognition
- Face Detector: If no recognizer is plugged, all detected face are marked as the unknown person
- Face Recognizer: If no detector is plugged, only already scanned faces marked as unknown will be processed. They are implicitly read from the database.
- [DatabaseWriter](#): Writes the detection and recognition results to the database. The trainer works on a completely different storage and is not affected by the database writer.
- DatabaseEditor: Can confirm or reject faces

PlugParallel: You can call this instead of the simple plugging method. Depending on the number of processor cores of the machine and the memory cost, more than one element may be plugged and process parallelly for this part of the pipeline.

Supported combinations: (Database [Filter](#) ->) (Preview Loader ->) Detector -> Recognizer (-> [DatabaseWriter](#)) (Database [Filter](#) ->) (Preview Loader ->) Detector (-> [DatabaseWriter](#)) (Database [Filter](#) ->) (Preview Loader ->) Recognizer (-> [DatabaseWriter](#)) DatabaseEditor Trainer DatabaseEditor -> Trainer

### 9.527.2.5 process [1/2]

```
bool Digikam::FacePipeline::process (
    const ItemInfo & info ) [slot]
```

If a filter is installed, returns false if the info is skipped, or true if it is processed. If no preview loader is plugged, you must provide a [DImg](#) for detection or recognition. Any of the signals below will only be emitted if true is returned.

### 9.527.2.6 process [2/2]

```
void Digikam::FacePipeline::process (
    const QList< ItemInfo > & infos ) [slot]
```

If a filter is installed, the [skipped\(\)](#) signal will inform about skipped infos. Filtering is done in a thread, returns immediately. Some of the signals below will be emitted in any case.

### 9.527.2.7 setPriority()

```
void Digikam::FacePipeline::setPriority (
    QThread::Priority priority )
```

The default setting is QThread::LowPriority.

## 9.528 Digikam::FacePipelineBase Class Reference

## 9.528.1 Member Enumeration Documentation

### 9.528.1.1 FilterMode

enum [Digikam::FacePipelineBase::FilterMode](#)

#### Enumerator

ScanAll	Will read any given image.
ScanNew	Scan new images, will skip any image that is already marked as scanned.
TrainNew	Adds new face(s) to training.
TrainAll	Retrains the face DB.
TrainRemove	Removes the face(s) from training.
TrainReset	Removes all face training, sets all images to not scanned.

### 9.528.1.2 WriteMode

enum [Digikam::FacePipelineBase::WriteMode](#)

#### Enumerator

NormalWrite	Write results. Merge with existing entries.
OverwriteAllFaces	Add new results. Previous all results will be cleared.
OverwriteUnconfirmed	Add new results. Previous unconfirmed results will be cleared.

## 9.528.2 Member Function Documentation

### 9.528.2.1 enqueue()

```
bool Digikam::FacePipelineBase::enqueue (
    MLPipelineQueue * thisQueue,
    MLPipelinePackageFoundation * package ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::MLPipelineFoundation](#).

## 9.539.1 Member Function Documentation

### 9.539.1.1 addMoreWorkers()

```
void Digikam::FacePipelineRetrain::addMoreWorkers ( ) [override], [protected], [virtual]
```

Implements [Digikam::MLPipelineFoundation](#).

### 9.539.1.2 classifier()

```
bool Digikam::FacePipelineRetrain::classifier ( ) [override], [protected], [virtual]
```

Implements [Digikam::MLPipelineFoundation](#).

### 9.539.1.3 extractor()

```
bool Digikam::FacePipelineRetrain::extractor ( ) [override], [protected], [virtual]
```

Implements [Digikam::MLPipelineFoundation](#).

### 9.539.1.4 finder()

```
bool Digikam::FacePipelineRetrain::finder ( ) [override], [protected], [virtual]
```

Implements [Digikam::MLPipelineFoundation](#).

### 9.539.1.5 loader()

```
bool Digikam::FacePipelineRetrain::loader ( ) [override], [protected], [virtual]
```

Implements [Digikam::MLPipelineFoundation](#).

### 9.539.1.6 start()

```
bool Digikam::FacePipelineRetrain::start ( ) [override], [virtual]
```

Reimplemented from [Digikam::MLPipelineFoundation](#).

### 9.539.1.7 trainer()

```
bool Digikam::FacePipelineRetrain::trainer ( ) [inline], [override], [protected], [virtual]
```

Implements [Digikam::MLPipelineFoundation](#).

### 9.539.1.8 writer()

```
bool Digikam::FacePipelineRetrain::writer ( ) [override], [protected], [virtual]
```

Implements [Digikam::MLPipelineFoundation](#).

## 9.540 Digikam::FacePreprocessor Class Reference

Inheritance diagram for Digikam::FacePreprocessor:

### Public Member Functions

- virtual cv::Mat **preprocess** (const cv::Mat &image) const =0

## 9.541 Digikam::FacePreviewLoader Class Reference

Inheritance diagram for Digikam::FacePreviewLoader:

### Public Slots

- void **process** (const FacePipelineExtendedPackage::Ptr &package)
- void **slotImageLoaded** (const LoadingDescription &loadingDescription, const DImg &img)

## Public Slots inherited from [Digikam::DynamicThread](#)

- void **start** ()
- void **stop** ()
  - Stop computation, sets the running flag to false.*
- void **wait** ()
  - Waits until the thread finishes.*

## Signals

- void **processed** (const [FacePipelineExtendedPackage::Ptr](#) &package)

## Signals inherited from [Digikam::LoadSaveThread](#)

- void **signalImageLoaded** (const [LoadingDescription](#) &loadingDescription, const [DImg](#) &img)
  - This signal is emitted when the loading process has finished.*
- void **signalImageSaved** (const [QString](#) &filePath, bool success)
- void **signalImageStartedLoading** (const [LoadingDescription](#) &loadingDescription)
  - All signals are delivered to the thread from where the [LoadSaveThread](#) object has been created.*
- void **signalImageStartedSaving** (const [QString](#) &filePath)
- void **signalLoadingProgress** (const [LoadingDescription](#) &loadingDescription, float progress)
  - This signal is emitted whenever new progress info is available and the notification policy allows emitting the signal.*
- void **signalMoreCompleteLoadingAvailable** (const [LoadingDescription](#) &oldLoadingDescription, const [LoadingDescription](#) &newLoadingDescription)
  - This signal is emitted if.*
- void **signalSavingProgress** (const [QString](#) &filePath, float progress)
- void **signalThumbnailLoaded** (const [LoadingDescription](#) &loadingDescription, const [QImage](#) &img)

## Signals inherited from [Digikam::DynamicThread](#)

- void **finished** ()
- void **starting** ()
  - Emitted if `emitSignals` is enabled.*

## Public Member Functions

- **FacePreviewLoader** ([FacePipeline::Private](#) \*const dd)
- void **cancel** ()
- void **checkRestart** ()
- bool **sentOutLimitReached** () const

## Public Member Functions inherited from Digikam::PreviewLoadThread

- [PreviewLoadThread](#) (QObject \*const parent=nullptr)  
*Creates a preview load thread.*
- void [load](#) (const [LoadingDescription](#) &description)  
*Load a preview.*
- void [load](#) (const QString &filePath, const [PreviewSettings](#) &settings, int size=0)  
*Load a preview.*
- void [loadFast](#) (const QString &filePath, int size)  
*Load a preview that is optimized for fast loading.*
- void [loadFastButLarge](#) (const QString &filePath, int minimumSize)  
*Load a preview that is as large as possible without sacrificing speed for performance.*
- void [loadHighQuality](#) (const QString &filePath, [PreviewSettings::RawLoading](#) rawLoadingMode=[PreviewSettings::RawPreviewAutomatic](#))  
*Load a preview with higher resolution, trading more quality for less speed.*
- void [setDisplayingWidget](#) (QWidget \*const widget)  
*Optionally, set the displaying widget for color management.*

## Public Member Functions inherited from Digikam::ManagedLoadSaveThread

- [ManagedLoadSaveThread](#) (QObject \*const parent=nullptr)  
*Termination is controlled by setting the TerminationPolicy Default is TerminationPolicyTerminateLoading.*
- void [load](#) (const [LoadingDescription](#) &description)  
*Append a task to load the given file to the task list.*
- void [load](#) (const [LoadingDescription](#) &description, [LoadingPolicy](#) policy)
- [LoadingPolicy](#) [loadingPolicy](#) () const
- void [save](#) (const [DImg](#) &image, const QString &filePath, const QString &format)  
*Append a task to save the image to the task list.*
- void [setLoadingPolicy](#) ([LoadingPolicy](#) policy)  
*Set the loading policy.*
- void [setTerminationPolicy](#) ([TerminationPolicy](#) terminationPolicy)
- void [stopAllTasks](#) ()
- void [stopLoading](#) (const [LoadingDescription](#) &desc, [LoadingTaskFilter](#) filter=[LoadingTaskFilterAll](#))  
*Same than previous method, but Stop and remove tasks filtered by LoadingDescription.*
- void [stopLoading](#) (const QString &filePath=QString(), [LoadingTaskFilter](#) filter=[LoadingTaskFilterAll](#))  
*Stop and remove tasks filtered by filePath and policy.*
- void [stopSaving](#) (const QString &filePath=QString())  
*Stop and remove saving tasks filtered by filePath.*
- [TerminationPolicy](#) [terminationPolicy](#) () const

## Public Member Functions inherited from Digikam::LoadSaveThread

- [LoadSaveThread](#) (QObject \*const parent=nullptr)
- [~LoadSaveThread](#) () override  
*Destructor: The thread will execute all pending tasks and wait for this upon destruction.*
- void [imageLoaded](#) (const [LoadingDescription](#) &loadingDescription, const [DImg](#) &img) override
- void [imageSaved](#) (const QString &filePath, bool success) override
- void [imageStartedLoading](#) (const [LoadingDescription](#) &loadingDescription) override
- void [imageStartedSaving](#) (const QString &filePath) override
- void [load](#) (const [LoadingDescription](#) &description)

*Append a task to load the given file to the task list.*

- void [loadingProgress](#) (const [LoadingDescription](#) &loadingDescription, float progress) override
- void [moreCompleteLoadingAvailable](#) (const [LoadingDescription](#) &oldLoadingDescription, const [LoadingDescription](#) &newLoadingDescription) override
- virtual bool **querySendNotifyEvent** () const
- void **save** (const [DImg](#) &image, const QString &filePath, const QString &format)

*Append a task to save the image to the task list.*

- void [savingProgress](#) (const QString &filePath, float progress) override
- void **setNotificationPolicy** ([NotificationPolicy](#) notificationPolicy)
- virtual void **taskHasFinished** ()
- void [thumbnailLoaded](#) (const [LoadingDescription](#) &loadingDescription, const QImage &img) override

## Public Member Functions inherited from [Digikam::DynamicThread](#)

- [DynamicThread](#) (QObject \*const parent=nullptr)

*This class extends [QRunnable](#), so you have to reimplement virtual void [run\(\)](#).*

- [~DynamicThread](#) () override

*The destructor calls [stop\(\)](#) and [wait\(\)](#), but if you, in your destructor, delete any data that is accessed by your [run\(\)](#) method, you must call [stop\(\)](#) and [wait\(\)](#) before yourself.*

- bool **isFinished** () const
- bool **isRunning** () const
- QThread::Priority **priority** () const
- void **setEmitSignals** (bool emitThem)
- void [setPriority](#) (QThread::Priority priority)

*Sets the priority for this dynamic thread.*

- State **state** () const

## Protected Attributes

- [FacePipeline::Private](#) \*const **d** = nullptr
  - int **maximumSentOutPackages** = qMin(QThread::idealThreadCount(), 4)
- Upper limit for memory cost.*
- [PackageLoadingDescriptionList](#) **scheduledPackages**

## Protected Attributes inherited from [Digikam::PreviewLoadThread](#)

- QWidget \* **m\_displayingWidget** = nullptr

## Protected Attributes inherited from [Digikam::ManagedLoadSaveThread](#)

- [LoadingPolicy](#) **m\_loadingPolicy** = [LoadingPolicyAppend](#)
- [TerminationPolicy](#) **m\_terminationPolicy** = [TerminationPolicyTerminateLoading](#)

## Protected Attributes inherited from [Digikam::LoadSaveThread](#)

- [LoadSaveTask](#) \* **m\_currentTask** = nullptr
- QMutex **m\_mutex**
- [NotificationPolicy](#) **m\_notificationPolicy** = [NotificationPolicyTimeLimited](#)
- QList< [LoadSaveTask](#) \* > **m\_todo**

## Additional Inherited Members

### Public Types inherited from [Digikam::ManagedLoadSaveThread](#)

## 9.542 Digikam::FaceRejectionOverlay Class Reference

Inheritance diagram for Digikam::FaceRejectionOverlay:

### Signals

- void **rejectFaces** (const QList< QModelIndex > &indexes)

## Signals inherited from [Digikam::ItemDelegateOverlay](#)

- void **hideNotification** ()
- void **requestNotification** (const QModelIndex &index, const QString &message)
- void **update** (const QModelIndex &index)

## Public Member Functions

- **FaceRejectionOverlay** (QObject \*const parent)
- void **setActive** (bool active) override  
*If active is true, this will call [createWidget\(\)](#), initialize the widget for use, and setup connections for the virtual slots.*

## Public Member Functions inherited from [Digikam::HoverButtonDelegateOverlay](#)

- **HoverButtonDelegateOverlay** (QObject \*const parent)
- **ItemViewHoverButton** \* **button** () const
- void **setActive** (bool active) override  
*Will call [createButton\(\)](#).*

## Public Member Functions inherited from [Digikam::AbstractWidgetDelegateOverlay](#)

- **AbstractWidgetDelegateOverlay** (QObject \*const parent)  
*This class provides functionality for using a widget in an overlay.*

## Public Member Functions inherited from [Digikam::ItemDelegateOverlay](#)

- **ItemDelegateOverlay** (QObject \*const parent=nullptr)
- virtual bool **acceptsDelegate** (QAbstractItemDelegate \*) const
- QAbstractItemDelegate \* **delegate** () const
- virtual void **mouseMoved** (QMouseEvent \*e, const QRect &visualRect, const QModelIndex &index)  
*Only these two methods are implemented as virtual methods.*
- virtual void **paint** (QPainter \*p, const QStyleOptionViewItem &option, const QModelIndex &index)
- void **setDelegate** (QAbstractItemDelegate \*delegate)
- void **setView** (QAbstractItemView \*view)
- QAbstractItemView \* **view** () const

## Protected Slots

- void **slotClicked** ()

## Protected Slots inherited from [Digikam::HoverButtonDelegateOverlay](#)

- void **slotEntered** (const QModelIndex &index) override
- void **slotReset** () override

## Protected Slots inherited from [Digikam::AbstractWidgetDelegateOverlay](#)

- virtual void [slotEntered](#) (const QModelIndex &index)  
*Default implementation shows the widget iff the index is valid and checkIndex returns true.*
- virtual void [slotLayoutChanged](#) ()
- virtual void [slotReset](#) ()  
*Default implementations of these three slots call [hide\(\)](#)*
- virtual void [slotRowsRemoved](#) (const QModelIndex &parent, int start, int end)
- virtual void [slotViewportEntered](#) ()

## Protected Slots inherited from [Digikam::ItemDelegateOverlay](#)

### Protected Member Functions

- bool [checkIndex](#) (const QModelIndex &index) const override  
*Return true here if you want to show the overlay for the given index.*
- [ItemViewHoverButton](#) \* [createButton](#) () override  
*Create your widget here.*
- void [updateButton](#) (const QModelIndex &index) override  
*Called when a new index is entered.*
- void [widgetEnterEvent](#) () override  
*Called when a QEvent::Enter resp.*
- void [widgetLeaveEvent](#) () override

## Protected Member Functions inherited from [Digikam::HoverButtonDelegateOverlay](#)

- QWidget \* [createWidget](#) () override  
*Create your widget here.*
- void [visualChange](#) () override  
*Called when any change from the delegate occurs - when the overlay is installed, when size hints, styles or fonts change.*

## Protected Member Functions inherited from [Digikam::AbstractWidgetDelegateOverlay](#)

- bool [checkIndexOnEnter](#) (const QModelIndex &index) const  
*Utility method called from slotEntered.*
- bool [eventFilter](#) (QObject \*obj, QEvent \*event) override
- virtual void [hide](#) ()  
*Called when the widget shall be hidden (mouse cursor left index, viewport, uninstalled etc.).*
- virtual QString [notifyMultipleMessage](#) (const QModelIndex &, int number)
- QWidget \* [parentWidget](#) () const  
*Returns the widget to be used as parent for your widget created in [createWidget\(\)](#)*
- virtual void [viewportLeaveEvent](#) (QObject \*obj, QEvent \*event)  
*Called when a QEvent::Leave of the viewport is received.*
- void [widgetEnterNotifyMultiple](#) (const QModelIndex &index)  
*A sample implementation for above methods.*
- void [widgetLeaveNotifyMultiple](#) ()

## Protected Member Functions inherited from [Digikam::ItemDelegateOverlay](#)

- `QList< QModelIndex > affectedIndexes` (const QModelIndex &index) const
- `bool affectsMultiple` (const QModelIndex &index) const  
*For the context that an overlay can affect multiple items: Assuming the currently overlaid index is given.*
- `int numberOfAffectedIndexes` (const QModelIndex &index) const
- `bool viewHasMultiSelection` () const  
*Utility method.*

## Additional Inherited Members

## Protected Attributes inherited from [Digikam::AbstractWidgetDelegateOverlay](#)

- `bool m_mouseButtonPressedOnWidget` = false
- `QWidget * m_widget` = nullptr

## Protected Attributes inherited from [Digikam::ItemDelegateOverlay](#)

- `QAbstractItemDelegate * m_delegate` = nullptr
- `QAbstractItemView * m_view` = nullptr

## 9.542.1 Member Function Documentation

### 9.542.1.1 checkIndex()

```
bool Digikam::FaceRejectionOverlay::checkIndex (
    const QModelIndex & index ) const [override], [protected], [virtual]
```

The default implementation returns true.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.542.1.2 createButton()

```
ItemViewHoverButton * Digikam::FaceRejectionOverlay::createButton ( ) [override], [protected],
[virtual]
```

Pass view() as parent.

Implements [Digikam::HoverButtonDelegateOverlay](#).

### 9.542.1.3 setActive()

```
void Digikam::FaceRejectionOverlay::setActive (
    bool active ) [override], [virtual]
```

If active is false, this will delete the widget and disconnect all signal from model and view to this object (!)

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

#### 9.542.1.4 updateButton()

```
void Digikam::FaceRejectionOverlay::updateButton (
    const QModelIndex & index ) [override], [protected], [virtual]
```

Reposition your button here, adjust and store state.

Implements [Digikam::HoverButtonDelegateOverlay](#).

#### 9.542.1.5 widgetEnterEvent()

```
void Digikam::FaceRejectionOverlay::widgetEnterEvent ( ) [override], [protected], [virtual]
```

QEvent::Leave event for the widget is received. The default implementation does nothing.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

#### 9.542.1.6 widgetLeaveEvent()

```
void Digikam::FaceRejectionOverlay::widgetLeaveEvent ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

## 9.543 Digikam::FaceRejectionOverlayButton Class Reference

Inheritance diagram for Digikam::FaceRejectionOverlayButton:

### Public Member Functions

- **FaceRejectionOverlayButton** (QAbstractItemView \*const parentView)
- QSize [sizeHint](#) () const override

*Reimplement to match the size of your icon.*

## Public Member Functions inherited from [Digikam::ItemViewHoverButton](#)

- **ItemViewHoverButton** (QAbstractItemView \*const parentView)
- QModelIndex **index** () const
- void **initIcon** ()
- void **reset** ()
- void **setIndex** (const QModelIndex &index)
- void **setVisible** (bool visible) override

## Protected Member Functions

- QIcon **icon** () override  
*Return your icon here.*
- void **updateToolTip** () override  
*Optionally update tooltip here.*

## Protected Member Functions inherited from [Digikam::ItemViewHoverButton](#)

- void **enterEvent** (QEnterEvent \*event)
- void **leaveEvent** (QEvent \*event)
- void **paintEvent** (QPaintEvent \*event)
- void **setup** ()  
*to call in children class constructors to init signal/slot connections.*

## Additional Inherited Members

## Protected Slots inherited from [Digikam::ItemViewHoverButton](#)

- void **refreshIcon** ()
- void **setFadingValue** (int value)
- void **startFading** ()
- void **stopFading** ()

## Protected Attributes inherited from [Digikam::ItemViewHoverButton](#)

- QTimerLine \* **m\_fadingTimeLine** = nullptr
- int **m\_fadingValue** = 0
- QIcon **m\_icon**
- QPersistentModelIndex **m\_index**
- bool **m\_isHovered** = false

## 9.543.1 Member Function Documentation

### 9.543.1.1 icon()

```
QIcon Digikam::FaceRejectionOverlayButton::icon ( ) [override], [protected], [virtual]
```

Will be queried again on toggle.

Implements [Digikam::ItemViewHoverButton](#).

### 9.543.1.2 sizeHint()

QSize Digikam::FaceRejectionOverlayButton::sizeHint ( ) const [override], [virtual]

Implements [Digikam::ItemViewHoverButton](#).

### 9.543.1.3 updateToolTip()

void Digikam::FaceRejectionOverlayButton::updateToolTip ( ) [override], [protected], [virtual]

Will be called again on state change.

Reimplemented from [Digikam::ItemViewHoverButton](#).

## 9.544 Digikam::FaceScanSettings Class Reference

### Public Types

- enum [AlreadyScannedHandling](#) { [Skip](#) , [Rescan](#) , [ClearAll](#) , [RecognizeOnly](#) }  
*To detect and recognize.*
- enum [FaceDetectionModel](#) { [SSDMOBILENET](#) , [YOLOv3](#) , [YuNet](#) }  
*Face detection AI models.*
- enum [FaceDetectionSize](#) { [ExtraSmall](#) , [Small](#) , [Medium](#) , [Large](#) , [ExtraLarge](#) }  
*Face detection size.*
- enum [FaceRecognitionModel](#) { [OpenFace](#) , [SFace](#) }  
*Face recognition AI models.*
- enum [ScanTask](#) { [DetectAndRecognize](#) , [RecognizeMarkedFaces](#) , [RetrainAll](#) , [Reset](#) }  
*Different possible tasks processed while scanning operation.*

### Public Attributes

- AlbumList **albums**  
*Albums to scan.*
- [AlreadyScannedHandling](#) **alreadyScannedHandling** = [Skip](#)
- int [detectAccuracy](#) = DNN\_MODEL\_THRESHOLD\_NOT\_SET  
*Detection accuracy.*
- [FaceDetectionModel](#) **detectModel** = [FaceDetectionModel::YuNet](#)  
*Detection Model.*
- [FaceDetectionSize](#) **detectSize** = [FaceDetectionSize::Large](#)  
*Detection Model.*
- [ItemInfoList](#) **infos**  
*Image infos to scan.*
- int [recognizeAccuracy](#) = DNN\_MODEL\_THRESHOLD\_NOT\_SET  
*Detection accuracy.*
- [FaceRecognitionModel](#) **recognizeModel** = [FaceRecognitionModel::OpenFace](#)  
*Detection Model.*
- [ScanTask](#) **task** = [DetectAndRecognize](#)
- bool **useFullCpu** = false  
*Processing power.*
- bool **wholeAlbums** = false  
*Whole albums checked.*

## 9.544.1 Member Enumeration Documentation

### 9.544.1.1 AlreadyScannedHandling

enum `Digikam::FaceScanSettings::AlreadyScannedHandling`

#### Enumerator

Skip	Skip faces from images already scanned.
Rescan	Rescan faces from images already scanned.
ClearAll	Clear all faces data from images already scanned. Clear identities and training data from FacesDb.
RecognizeOnly	Recognize faces from images already scanned.

### 9.544.1.2 FaceDetectionModel

enum `Digikam::FaceScanSettings::FaceDetectionModel`

#### Enumerator

SSDMOBILENET	SSD MobileNet neural network inference [ <a href="https://github.com/arunponnusamy/cvlib">https://github.com/arunponnusamy/cvlib</a> ].
YOLOv3	YOLO neural network inference [ <a href="https://github.com/sthanhng/yoloface">https://github.com/sthanhng/yoloface</a> ].
YuNet	YuNet neural network inference [ <a href="https://github.com/opencv/opencv_zoo/tree/main">https://github.com/opencv/opencv_zoo/tree/main</a> ].

### 9.544.1.3 FaceRecognitionModel

enum `Digikam::FaceScanSettings::FaceRecognitionModel`

#### Enumerator

OpenFace	OpenFace pre-trained neural network model [ <a href="https://github.com/sahilshah/openface/tree/master">https://github.com/sahilshah/openface/tree/master</a> ].
SFace	SFace pre-trained neural network model [ <a href="https://github.com/opencv/opencv_zoo/blob/main/models/face_recognition_sface/">https://github.com/opencv/opencv_zoo/blob/main/models/face_recognition_sface/</a> ].

### 9.544.1.4 ScanTask

enum `Digikam::FaceScanSettings::ScanTask`

#### Enumerator

DetectAndRecognize	Detect and recognize faces only.
RecognizeMarkedFaces	Recognize already marked faces only.
RetrainAll	Retrain faces only.

## 9.544.2 Member Data Documentation

### 9.544.2.1 detectAccuracy

```
int Digikam::FaceScanSettings::detectAccuracy = DNN_MODEL_THRESHOLD_NOT_SET
```

use default value from dnnmodels.conf

### 9.544.2.2 recognizeAccuracy

```
int Digikam::FaceScanSettings::recognizeAccuracy = DNN_MODEL_THRESHOLD_NOT_SET
```

use default value from dnnmodels.conf

## 9.545 Digikam::FaceScanWidget Class Reference

Inheritance diagram for Digikam::FaceScanWidget:

## Public Member Functions

- **FaceScanWidget** (QWidget \*const parent=nullptr)
- **FaceScanSettings settings** () const
- bool **settingsConflicted** () const

## Public Member Functions inherited from Digikam::StateSavingObject

- **StateSavingObject** (QObject \*const host)  
*Constructor.*
- virtual **~StateSavingObject** ()  
*Destructor.*
- **StateSavingDepth getStateSavingDepth** () const  
*Returns the depth used for state saving or loading.*
- void **loadState** ()  
*Invokes loading the class' state.*
- void **saveState** ()  
*Invokes saving the class' state.*
- virtual void **setConfigGroup** (const KConfigGroup &group)  
*Sets a dedicated config group that will be used to store and reload the state from.*
- virtual void **setEntryPrefix** (const QString &prefix)  
*Define a prefix that will be used for every entry in the config group.*
- void **setStateSavingDepth** (const **StateSavingDepth** depth)  
*Sets the depth used for state saving or loading.*

## Protected Member Functions

- void **doLoadState** () override  
*Implement this hook method for state loading.*
- void **doSaveState** () override  
*Implement this hook method for state saving.*

## Protected Member Functions inherited from Digikam::StateSavingObject

- QString **entryName** (const QString &base) const  
*Always use this method to create config group entry names.*
- KConfigGroup **getConfigGroup** () const  
*Returns the config group that must be used for state saving and loading.*

## Additional Inherited Members

## Public Types inherited from Digikam::StateSavingObject

- enum **StateSavingDepth** { **INSTANCE** , **DIRECT\_CHILDREN** , **RECURSIVE** }  
*This enum defines the "depth" of the `StateSavingObject::loadState()` and `StateSavingObject::saveState()` methods.*

## 9.545.1 Member Function Documentation

### 9.545.1.1 doLoadState()

```
void Digikam::FaceScanWidget::doLoadState ( ) [override], [protected], [virtual]
```

Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation. ClearAll isn't a valid value anymore so set it Rescan. ClearAll is only used by ResetFacesDb in maintenance.

Implements [Digikam::StateSavingObject](#).

### 9.545.1.2 doSaveState()

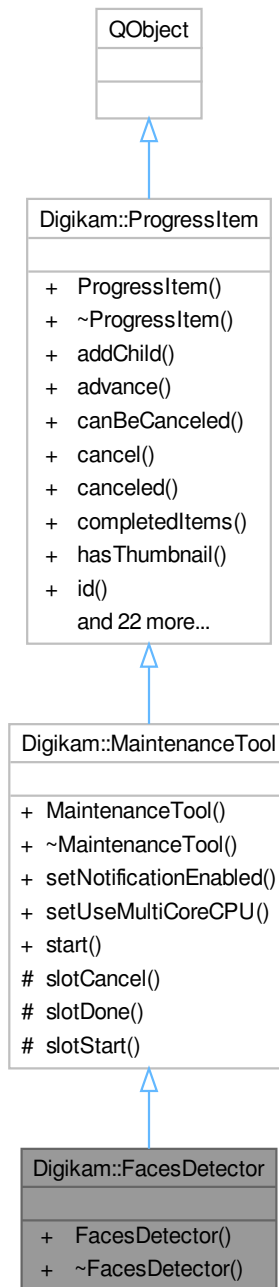

```
void Digikam::FaceScanWidget::doSaveState ( ) [override], [protected], [virtual]
```

Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

## 9.546 Digikam::FacesDetector Class Reference

- static bool **isTheIgnoredPerson** (int tagId)
- static bool **isTheUnconfirmedPerson** (int tagId)
- static bool **isTheUnknownPerson** (int tagId)
- static int **personParentTag** ()  
*The suggested parent tag for persons.*
- static int **scannedForFacesTagId** ()
- static int **tagForPerson** (const QString &name, int parentId=-1, const QString &fullName=QString())  
*Looks for the given person name under the People tags tree, and returns an ID.*
- static int **unconfirmedPersonTagId** ()
- static int **unknownPersonTagId** ()

### 9.548.1 Member Function Documentation

#### 9.548.1.1 applyTagIdentityMapping()

```
void Digikam::FaceTags::applyTagIdentityMapping (
    int tagId,
    const QMap< QString, QString > & attributes ) [static]
```

Subsequently, the [Identity](#) can be retrieved via the `identityAttributes()`.

### 9.548.1.2 ensureIsPerson()

```
void Digikam::FaceTags::ensureIsPerson (
    int tagId,
    const QString & fullName = QString() ) [static]
```

If not, it will be converted. Optionally, pass the full name. (tag name is not changed).

### 9.548.1.3 getOrCreateTagForPerson()

```
int Digikam::FaceTags::getOrCreateTagForPerson (
    const QString & name,
    int parentId = -1,
    const QString & fullName = QString() ) [static]
```

If not, creates a new tag. Per default, fullName is the same as name.

### 9.548.1.4 tagForPerson()

```
int Digikam::FaceTags::tagForPerson (
    const QString & name,
    int parentId = -1,
    const QString & fullName = QString() ) [static]
```

Returns 0 if no name found. Per default, fullName is the same as name. As parentId of -1 signals to look for any tag, a valid parentId will limit the search to direct children of this tag. parentId of 0 means top-level tag.

## 9.549 Digikam::FaceTagsEditor Class Reference

Inheritance diagram for Digikam::FaceTagsEditor:

### Public Member Functions

- void `add` (const `FaceTagsIface` &face, bool trainFace=true)  
*Adds a new entry to the database.*

- [FaceTagsIface](#) **add** (qulonglong imageid, int tagId, const [TagRegion](#) &region, bool trainFace=true)
- [FaceTagsIface](#) **addManually** (const [FaceTagsIface](#) &face)

*Changes the region of the given entry.*
- [FaceTagsIface](#) **changeSuggestedName** (const [FaceTagsIface](#) &previousEntry, int unconfirmedNameTagId)
 

*Switches an unknownPersonEntry or unconfirmedEntry to an unconfirmedEntry (with a different suggested name).*
- [FaceTagsIface](#) **changeTag** (const [FaceTagsIface](#) &face, int newTagId)
 

*Changes the tag of the given entry.*
- [QList](#)< [FaceTagsIface](#) > **confirmedFaceTagsIfaces** (qulonglong imageid) const
- [FaceTagsIface](#) **confirmName** (const [FaceTagsIface](#) &face, int tagId=-1, const [TagRegion](#) &confirmedRegion=[TagRegion](#)())
 

*Assign the name tag for given face entry.*
- [QList](#)< [FaceTagsIface](#) > **databaseFaces** (qulonglong imageid) const
 

*Reads the FaceTagsIfaces for the given image id from the database.*
- [QList](#)< [FaceTagsIface](#) > **databaseFaces** (qulonglong imageid, [FaceTagsIface::TypeFlags](#) flags) const
- [QList](#)< [FaceTagsIface](#) > **databaseFacesForTraining** (qulonglong imageid) const
- int **faceCountForPersonInImage** (qulonglong imageid, int tagId) const
 

*Returns the number of faces a particular person has in the specified image.*
- [QList](#)< [ItemTagPair](#) > **faceItemTagPairs** (qulonglong imageid, [FaceTagsIface::TypeFlags](#) flags) const
- [QMap](#)< [QString](#), [QString](#) > **getSuggestedNames** (qulonglong id) const
 

*Returns a Map of Tag Regions (in XML format) to Suggested Name (from Face Recognition) for the given image.*
- [QList](#)< [QRect](#) > **getTagRects** (qulonglong imageid) const
 

*Returns a list of all tag rectangles for the image.*
- [QList](#)< [FaceTagsIface](#) > **ignoredFaceTagsIfaces** (qulonglong imageid) const
- int **numberOfFaces** (qulonglong imageid) const
 

*Returns the number of faces present in an image.*
- void **removeAllFaces** (qulonglong imageid)
 

*Unassigns all face tags from the image and sets it's scanned property to false.*
- void **removeFace** (const [FaceTagsIface](#) &face, bool touchTags=true)
 

*Remove the given face.*
- void **removeFace** (qulonglong imageid, const [QRect](#) &rect)
 

*Remove a face or the face for a certain rect from an image.*
- void **removeFaces** (const [QList](#)< [FaceTagsIface](#) > &faces)
- bool **rotateFaces** (qulonglong imageid, const [QSize](#) &size, int oldOrientation, int newOrientation)
 

*Rotate face tags.*
- [QList](#)< [FaceTagsIface](#) > **unconfirmedFaceTagsIfaces** (qulonglong imageid) const
 

*Returns list of Unconfirmed and Unknown faces in the Image.*
- [QList](#)< [FaceTagsIface](#) > **unconfirmedNameFaceTagsIfaces** (qulonglong imageid) const
 

*Returns a list of UnconfirmedFaces in the Image.*

### Static Public Member Functions

- static [FaceTagsIface](#) **confirmedEntry** (const [FaceTagsIface](#) &face, int tagId=-1, const [TagRegion](#) &confirmedRegion=[TagRegion](#)())
 

*Returns the entry that would be added if the given face is confirmed.*
- static [FaceTagsIface](#) **unconfirmedEntry** (qulonglong imageid, int tagId, const [TagRegion](#) &region)
 

*Returns the entry that would be added if the given face is autodetected.*
- static [FaceTagsIface](#) **unknownPersonEntry** (qulonglong imageid, const [TagRegion](#) &region)

## Protected Member Functions

- void **addFaceAndTag** ([ItemTagPair](#) &pair, const [FaceTagsIface](#) &face, const QStringList &properties, bool addTag)
- virtual void **addNormalTag** (qulonglong imageId, int tagId)
- void **removeFaceAndTag** ([ItemTagPair](#) &pair, const [FaceTagsIface](#) &face, bool touchTags)
- virtual void **removeNormalTag** (qulonglong imageId, int tagId)
- virtual void **removeNormalTags** (qulonglong imageId, const QList< int > &tagIds)

## 9.549.1 Member Function Documentation

### 9.549.1.1 add()

```
void Digikam::FaceTagsEditor::add (
    const FaceTagsIface & face,
    bool trainFace = true )
```

The convenience wrapper will return the newly created entry. If trainFace is true, the face will also be listed in the db as needing training. The tag of the face will, if necessary, be converted to a person tag.

### 9.549.1.2 addNormalTag()

```
void Digikam::FaceTagsEditor::addNormalTag (
    qulonglong imageId,
    int tagId ) [protected], [virtual]
```

Reimplemented in [Digikam::FaceUtils](#).

### 9.549.1.3 changeRegion()

```
FaceTagsIface Digikam::FaceTagsEditor::changeRegion (
    const FaceTagsIface & face,
    const TagRegion & newRegion )
```

Returns the face with the new region set.

### 9.549.1.4 changeTag()

```
FaceTagsIface Digikam::FaceTagsEditor::changeTag (
    const FaceTagsIface & face,
    int newTagId )
```

Returns the face with the new Tag. Since a new Tag is going to be assigned to the Face, it's important to remove the association between the face and the old tagId.

If the face is being ignored and it was an unconfirmed or unknown face don't remove a possible tag. See bug 449142.

We store metadata of [FaceTags](#), if it's a confirmed person.

### 9.549.1.5 confirmName()

```
FaceTagsIface Digikam::FaceTagsEditor::confirmName (
    const FaceTagsIface & face,
    int tagId = -1,
    const TagRegion & confirmedRegion = TagRegion() )
```

Pass the tagId if it changed or was newly assigned (UnknownName). Pass the new, corrected region if it changed. If the default values are passed, tag id or region are taken from the given face. The given face should be an unchanged entry read from the database. The confirmed tag will, if necessary, be converted to a person tag. Returns the newly inserted entry.

### 9.549.1.6 getSuggestedNames()

```
QMap< QString, QString > Digikam::FaceTagsEditor::getSuggestedNames (
    qlonglong id ) const
```

This function makes read operations to the database, and hence can be inefficient when called repeatedly. A cached version is provided in [ItemInfo](#), and should be preferred for intensive operations such as sorting, categorizing etc. For Unconfirmed Results, the value is stored as a tuple of (SuggestedId, Property, Region). Look at the digikam.db file for more details.

### 9.549.1.7 getTagRects()

```
QList< QRect > Digikam::FaceTagsEditor::getTagRects (
    qlonglong imageid ) const
```

Unlike findAndTagFaces, this does not take a [DImg](#), because it returns only a QRect, not a Face, so no need of cropping a face rectangle.

### 9.549.1.8 removeFace()

```
void Digikam::FaceTagsEditor::removeFace (
    const FaceTagsIface & face,
    bool touchTags = true )
```

If appropriate, the tag is also removed.

### 9.549.1.9 removeNormalTag()

```
void Digikam::FaceTagsEditor::removeNormalTag (
    qlonglong imageId,
    int tagId ) [protected], [virtual]
```

Reimplemented in [Digikam::FaceUtils](#).

#### 9.549.1.10 unconfirmedEntry()

```
FaceTagsIface Digikam::FaceTagsEditor::unconfirmedEntry (
    qlonglong imageId,
    int tagId,
    const TagRegion & region ) [static]
```

If tagId is -1, the unknown person will be taken.

#### 9.549.1.11 unconfirmedFaceTagsIfaces()

```
QList< FaceTagsIface > Digikam::FaceTagsEditor::unconfirmedFaceTagsIfaces (
    qlonglong imageid ) const
```

If you want just Unconfirmed Faces,

See also

[unconfirmedNameFaceTagsIfaces](#).

#### 9.549.1.12 unconfirmedNameFaceTagsIfaces()

```
QList< FaceTagsIface > Digikam::FaceTagsEditor::unconfirmedNameFaceTagsIfaces (
    qlonglong imageid ) const
```

Different from

- static Type **typeForAttribute** (const QString &attribute, int tagld=0)  
*Return the Type for the given attribute.*
- static Type **typeForId** (int tagld)  
*Returns the Face Type corresponding to the given Tagld.*

## Protected Attributes

- `qulonglong m_imageld = 0`
- `TagRegion m_region`
- `int m_tagId = 0`
- Type `m_type = InvalidFace`

## 9.550.1 Member Function Documentation

### 9.550.1.1 fromVariant()

```
FaceTagsIface Digikam::FaceTagsIface::fromVariant (
    const QVariant & var ) [static]
```

Only native QVariant types are used, that is, the QVariant will not have a custom type, thus it can be compared by value by operator==.

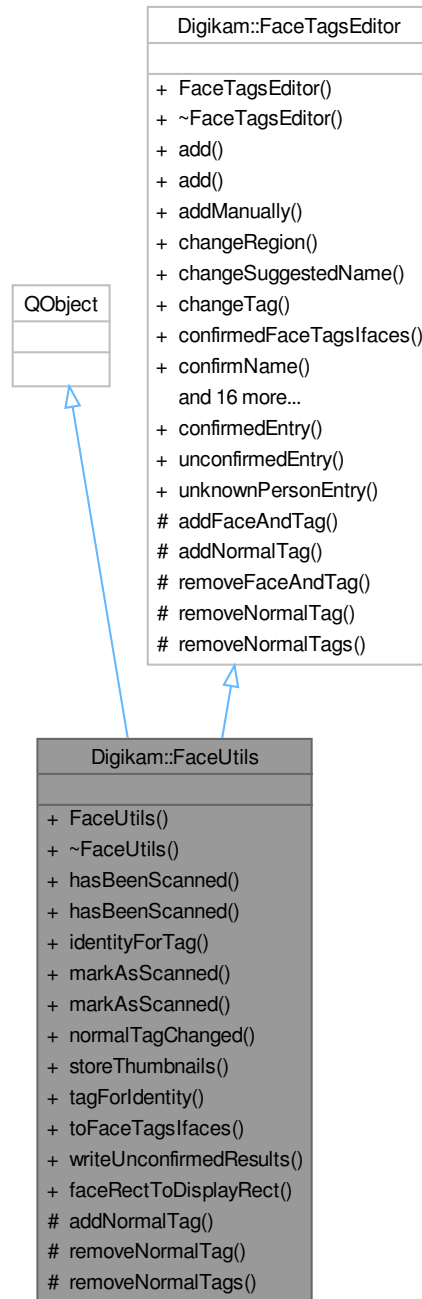

### 9.550.1.2 typeForAttribute()

```
FaceTagsIface::Type Digikam::FaceTagsIface::typeForAttribute (
    const QString & attribute,
    int tagId = 0 ) [static]
```

To distinguish between UnknownName and UnconfirmedName, the tagId must be given.

- void **add** (const [FaceTagsIface](#) &face, bool trainFace=true)  
*Adds a new entry to the database.*
- [FaceTagsIface](#) **add** (qulonglong imageid, int tagId, const [TagRegion](#) &region, bool trainFace=true)
- [FaceTagsIface](#) **addManually** (const [FaceTagsIface](#) &face)
- [FaceTagsIface](#) **changeRegion** (const [FaceTagsIface](#) &face, const [TagRegion](#) &newRegion)  
*Changes the region of the given entry.*
- [FaceTagsIface](#) **changeSuggestedName** (const [FaceTagsIface](#) &previousEntry, int unconfirmedNameTagId)  
*Switches an unknownPersonEntry or unconfirmedEntry to an unconfirmedEntry (with a different suggested name).*
- [FaceTagsIface](#) **changeTag** (const [FaceTagsIface](#) &face, int newTagId)  
*Changes the tag of the given entry.*
- QList<[FaceTagsIface](#)> **confirmedFaceTagsIfaces** (qulonglong imageid) const
- [FaceTagsIface](#) **confirmName** (const [FaceTagsIface](#) &face, int tagId=-1, const [TagRegion](#) &confirmedRegion=[TagRegion](#)())  
*Assign the name tag for given face entry.*
- QList<[FaceTagsIface](#)> **databaseFaces** (qulonglong imageid) const  
*Reads the FaceTagsIfaces for the given image id from the database.*
- QList<[FaceTagsIface](#)> **databaseFaces** (qulonglong imageid, [FaceTagsIface::TypeFlags](#) flags) const
- QList<[FaceTagsIface](#)> **databaseFacesForTraining** (qulonglong imageid) const
- int **faceCountForPersonInImage** (qulonglong imageid, int tagId) const  
*Returns the number of faces a particular person has in the specified image.*
- QList<[ItemTagPair](#)> **faceItemTagPairs** (qulonglong imageid, [FaceTagsIface::TypeFlags](#) flags) const
- QMap< QString, QString > **getSuggestedNames** (qulonglong id) const  
*Returns a Map of Tag Regions (in XML format) to Suggested Name (from Face Recognition) for the given image.*
- QList< [QRect](#) > **getTagRects** (qulonglong imageid) const  
*Returns a list of all tag rectangles for the image.*
- QList<[FaceTagsIface](#)> **ignoredFaceTagsIfaces** (qulonglong imageid) const
- int **numberOfFaces** (qulonglong imageid) const  
*Returns the number of faces present in an image.*

- void **removeAllFaces** (qulonglong imageid)
 

*Unassigns all face tags from the image and sets it's scanned property to false.*
- void **removeFace** (const [FaceTagsIface](#) &face, bool touchTags=true)
 

*Remove the given face.*
- void **removeFace** (qulonglong imageid, const QRect &rect)
 

*Remove a face or the face for a certain rect from an image.*
- void **removeFaces** (const QList< [FaceTagsIface](#) > &faces)
- bool **rotateFaces** (qulonglong imageid, const QSize &size, int oldOrientation, int newOrientation)
 

*Rotate face tags.*
- QList< [FaceTagsIface](#) > **unconfirmedFaceTagsIfaces** (qulonglong imageid) const
 

*Returns list of Unconfirmed and Unknown faces in the Image.*
- QList< [FaceTagsIface](#) > **unconfirmedNameFaceTagsIfaces** (qulonglong imageid) const
 

*Returns a list of UnconfirmedFaces in the Image.*

### Static Public Member Functions

- static QRect **faceRectToDisplayRect** (const QRect &rect)
 

*For display, it may be desirable to display a slightly larger region than the strict face rectangle.*

### Static Public Member Functions inherited from [Digikam::FaceTagsEditor](#)

- static [FaceTagsIface](#) **confirmedEntry** (const [FaceTagsIface](#) &face, int tagId=-1, const [TagRegion](#) &confirmedRegion=[TagRegion](#)())
 

*Returns the entry that would be added if the given face is confirmed.*
- static [FaceTagsIface](#) **unconfirmedEntry** (qulonglong imageid, int tagId, const [TagRegion](#) &region)
 

*Returns the entry that would be added if the given face is autodetected.*
- static [FaceTagsIface](#) **unknownPersonEntry** (qulonglong imageid, const [TagRegion](#) &region)

### Protected Member Functions

- void **addNormalTag** (qulonglong imageid, int tagId) override
 

*Reimplemented from parent class.*
- void **removeNormalTag** (qulonglong imageid, int tagId) override
- void **removeNormalTags** (qulonglong imageid, const QList< int > &tagIds) override

### Protected Member Functions inherited from [Digikam::FaceTagsEditor](#)

- void **addFaceAndTag** ([ItemTagPair](#) &pair, const [FaceTagsIface](#) &face, const QStringList &properties, bool addTag)
- void **removeFaceAndTag** ([ItemTagPair](#) &pair, const [FaceTagsIface](#) &face, bool touchTags)

## 9.551.1 Member Function Documentation

### 9.551.1.1 addNormalTag()

```
void Digikam::FaceUtils::addNormalTag (
    qulonglong imageId,
    int tagId ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::FaceTagsEditor](#).

### 9.551.1.2 faceRectToDisplayRect()

```
QRect Digikam::FaceUtils::faceRectToDisplayRect (
    const QRect & rect ) [static]
```

This returns a pixel margin commonly used to increase the rectangle size in all four directions.

### 9.551.1.3 removeNormalTag()

```
void Digikam::FaceUtils::removeNormalTag (
    qulonglong imageId,
    int tagId ) [override], [protected], [virtual]
```

If the face just removed was the final face associated with that Tag, reset Tag Icon.

Reimplemented from [Digikam::FaceTagsEditor](#).

### 9.551.1.4 removeNormalTags()

```
void Digikam::FaceUtils::removeNormalTags (
    qulonglong imageId,
    const QList< int > & tagIds ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::FaceTagsEditor](#).

### 9.551.1.5 storeThumbnails()

```
void Digikam::FaceUtils::storeThumbnails (
    ThumbnailLoadThread *const thread,
    const QString & filePath,
    const QList< FaceTagsIface > & databaseFaces,
    const DImg & image )
```

Images in faces and thumbnails.

If requested, the faces will be scaled to the given (fixed) size. Store the needed thumbnails for the given faces. This can be a huge optimization when the has already been loaded anyway.

### 9.551.1.6 toFaceTagsIfaces()

```
QList< FaceTagsIface > Digikam::FaceUtils::toFaceTagsIfaces (
    qulonglong imageid,
    const QList< QRectF > & detectedFaces,
    const QList< Identity > & recognitionResults,
    const QSize & fullSize ) const
```

Convert between [FacesEngine](#) results and [FaceTagsIface](#).

### 9.551.1.7 writeUnconfirmedResults()

```
QList< FaceTagsIface > Digikam::FaceUtils::writeUnconfirmedResults (
    qlonglong imageid,
    const QList< QRectF > & detectedFaces,
    const QList< Identity > & recognitionResults,
    const QSize & fullSize )
```

The results are written to the database and merged with existing entries. The returned list contains the faces written to the database and has the same size as the given list. If a face was skipped (because of an existing entry), a null [FaceTagsIface](#) will be at this place.

## 9.552 Digikam::FacialRecognitionWrapper Class Reference

### Public Member Functions

- **FacialRecognitionWrapper** (const [FacialRecognitionWrapper](#) &)
- **Identity addIdentity** (const QMap< QString, QString > &attributes)
  - Adds a new identity with the specified attributes.*
- void **addIdentityAttribute** (int id, const QString &attribute, const QString &value)
- void **addIdentityAttributes** (int id, const QMap< QString, QString > &attributes)
  - Adds or sets, resp., the attributes of an identity.*
- **Identity addIdentityDebug** (const QMap< QString, QString > &attributes)
  - This is the debug version of addIdentity, so the identity is only added to identityCache, but not into the recognition database.*
- QList< [Identity](#) > **allIdentities** () const
  - Returns all identities known to the database.*
- void **clearAllTraining** ()
  - Deletes the training data for all identities, leaving the identities as such in the database.*
- void **clearTraining** (const QList< [Identity](#) > &identitiesToClean)
  - Deletes the training data for the given identity, leaving the identity as such in the database.*
- void **clearTraining** (const QString &hash)
  - Deletes the training image for the given identity, leaving the identity as such in the database.*
- void **deleteIdentities** (QList< [Identity](#) > identitiesToBeDeleted)
  - Deletes a list of identities from the database.*
- void **deleteIdentity** (const [Identity](#) &identityToBeDeleted)
  - Deletes an identity from the database.*
- **Identity findIdentity** (const QMap< QString, QString > &attributes) const
  - Finds the identity matching the given attributes.*
- **Identity findIdentity** (const QString &attribute, const QString &value) const
  - Finds the first identity with matching attribute - value.*
- **Identity identity** (int id) const
- bool **integrityCheck** ()
  - Checks the integrity and returns true if everything is fine.*
- QVariantMap **parameters** () const
- **Identity recognizeFace** (QImage \*const image)
- QList< [Identity](#) > **recognizeFaces** (const QList< QImage \* > &images)
- QList< [Identity](#) > **recognizeFaces** ([ImageListProvider](#) \*const images)
  - Returns the recommended size if you want to scale face images for recognition.*
- void **setIdentityAttributes** (int id, const QMap< QString, QString > &attributes)
- void **setParameter** (const QString &parameter, const QVariant &value)

*Tunes backend parameters.*

- void **setParameters** (const [FaceScanSettings](#) &parameters)
- void **setParameters** (const QVariantMap &parameters)
- void **train** (const [Identity](#) &identityToBeTrained, const QList< QPair< QImage \*, QString > > &images)
- void **train** (const [Identity](#) &identityToBeTrained, const QPair< QImage \*, QString > &image)

*Performs training by using image data directly.*

- void **train** (const [Identity](#) &identityToBeTrained, [TrainingDataProvider](#) \*const data)
- void **train** (const QList< [Identity](#) > &identitiesToBeTrained, [TrainingDataProvider](#) \*const data)

*Performs training.*

- void **vacuum** ()

*Shrinks the database.*

## 9.552.1 Member Function Documentation

### 9.552.1.1 addIdentity()

```
Identity Digikam::FacialRecognitionWrapper::addIdentity (
    const QMap< QString, QString > & attributes )
```

Please note that a UUID is automatically generated.

### 9.552.1.2 allIdentities()

```
QList< Identity > Digikam::FacialRecognitionWrapper::allIdentities ( ) const
```

#### Note

For the documentation of standard attributes, see [identity.h](#)

### 9.552.1.3 findIdentity() [1/2]

```
Identity Digikam::FacialRecognitionWrapper::findIdentity (
    const QMap< QString, QString > & attributes ) const
```

Attributes are first checked with knowledge of their meaning. Secondly, all unknown attributes are used. Returns a null [Identity](#) if no match is possible or the map is empty.

### 9.552.1.4 findIdentity() [2/2]

```
Identity Digikam::FacialRecognitionWrapper::findIdentity (
    const QString & attribute,
    const QString & value ) const
```

Returns a null identity if no match is found or attribute is empty.

### 9.552.1.5 recognizeFaces()

```
QList< Identity > Digikam::FacialRecognitionWrapper::recognizeFaces (
    ImageListProvider *const images )
```

Larger images can be passed, but may be downscaled. Performs recognition. The face details to be recognized are passed by the provider. For each entry in the provider, in 1-to-1 mapping, a recognized identity or the null identity is returned.

### 9.552.1.6 setParameter()

```
void Digikam::FacialRecognitionWrapper::setParameter (
    const QString & parameter,
    const QVariant & value )
```

Available parameters: "accuracy", synonymous: "threshold", range: 0-1, type: float Determines recognition threshold, 0->accept very insecure recognitions, 1-> be very sure about a recognition.

"k-nearest" : limit the number of nearest neighbors for KNN "recognizeModel" : sets the recognizer model used to instantiate the correct recognizer

### 9.552.1.7 train() [1/2]

```
void Digikam::FacialRecognitionWrapper::train (
    const Identity & identityToBeTrained,
    const QPair< QImage *, QString > & image )
```

These are convenience functions for simple setups. If you want good performance and/or a more versatile implementation, be sure to implement your own [TrainingDataProvider](#) and use one of the above functions.

### 9.552.1.8 train() [2/2]

```
void Digikam::FacialRecognitionWrapper::train (
    const QList< Identity > & identitiesToBeTrained,
    TrainingDataProvider *const data )
```

The identities which have new images to be trained are given. An empty list means that all identities are checked.

All needed data will be queried from the provider.

An identifier for the current training context is given, which can identify the application or group of collections. (It is assumed that training from different contexts is based on non-overlapping collections of images. Keep it always constant for your app.)

## 9.553 Digikam::FFmpegBinary Class Reference

Inheritance diagram for Digikam::FFmpegBinary:

## 9.559.1 Member Function Documentation

### 9.559.1.1 [applyMetadata\(\)](#)

```
void Digikam::FileActionMngrDatabaseWorker::applyMetadata (
    const FileActionItemInfoList & infos,
    DisjointMetadata * hub ) [override], [virtual]
```

Reimplemented from [Digikam::DatabaseWorkerInterface](#).

### 9.559.1.2 [assignColorLabel\(\)](#)

```
void Digikam::FileActionMngrDatabaseWorker::assignColorLabel (
    const FileActionItemInfoList & infos,
    int colorId ) [override], [virtual]
```

Reimplemented from [Digikam::DatabaseWorkerInterface](#).

### 9.559.1.3 [assignPickLabel\(\)](#)

```
void Digikam::FileActionMngrDatabaseWorker::assignPickLabel (
    const FileActionItemInfoList & infos,
    int pickId ) [override], [virtual]
```

Reimplemented from [Digikam::DatabaseWorkerInterface](#).

#### 9.559.1.4 assignRating()

```
void Digikam::FileActionMngrDatabaseWorker::assignRating (
    const FileActionItemInfoList & infos,
    int rating ) [override], [virtual]
```

Reimplemented from [Digikam::DatabaseWorkerInterface](#).

#### 9.559.1.5 assignTags()

```
void Digikam::FileActionMngrDatabaseWorker::assignTags (
    const FileActionItemInfoList & infos,
    const QList< int > & tagIDs ) [override], [virtual]
```

Reimplemented from [Digikam::DatabaseWorkerInterface](#).

#### 9.559.1.6 copyAttributes()

```
void Digikam::FileActionMngrDatabaseWorker::copyAttributes (
    const FileActionItemInfoList & infos,
    const QStringList & derivedPaths ) [override], [virtual]
```

Reimplemented from [Digikam::DatabaseWorkerInterface](#).

#### 9.559.1.7 editGroup()

```
void Digikam::FileActionMngrDatabaseWorker::editGroup (
    int groupAction,
    const ItemInfo & pick,
    const FileActionItemInfoList & infos ) [override], [virtual]
```

Reimplemented from [Digikam::DatabaseWorkerInterface](#).

#### 9.559.1.8 removeTags()

```
void Digikam::FileActionMngrDatabaseWorker::removeTags (
    const FileActionItemInfoList & infos,
    const QList< int > & tagIDs ) [override], [virtual]
```

Reimplemented from [Digikam::DatabaseWorkerInterface](#).

#### 9.559.1.9 setExifOrientation()

```
void Digikam::FileActionMngrDatabaseWorker::setExifOrientation (
    const FileActionItemInfoList & infos,
    int orientation ) [override], [virtual]
```

Reimplemented from [Digikam::DatabaseWorkerInterface](#).

- static QString [escapeToken](#) (const QString &token)  
*Escape the token characters to make them work in regular expressions.*

## Protected Slots inherited from [Digikam::Rule](#)

- virtual void [slotTokenTriggered](#) (const QString &)

### 9.564.1 Member Function Documentation

#### 9.564.1.1 [parseOperation\(\)](#)

```
QString Digikam::FilePropertiesOption::parseOperation (
    ParseSettings & settings,
    const QRegularExpressionMatch & match ) [override], [protected], [virtual]
```

##### Parameters

<i>settings</i>	contains settings
<i>match</i>	result of the regular expression match done in <a href="#">Option::parse()</a>

##### Returns

Implements [Digikam::Option](#).

## 9.565 Digikam::FileReadLocker Class Reference

### Public Member Functions

- bool [tryLockForRead](#) (int timeout)
- bool [tryLockForWrite](#) ()
- bool [tryLockForWrite](#) (int timeout)
- void [unlock](#) ()

## 9.567 Digikam::FileSaveConflictBox Class Reference

Inheritance diagram for Digikam::FileSaveConflictBox:

### Public Types

- enum **ConflictRule** { **OVERWRITE** = 0 , **DIFFNAME** , **SKIPFILE** }

### Signals

- void **signalConflictButtonChanged** (int)

### Public Member Functions

- **FileSaveConflictBox** (QWidget \*const parent, bool addSkip=false)
- ConflictRule **conflictRule** () const
- void **readSettings** (const KConfigGroup &group)
- void **resetToDefault** ()
- void **setConflictRule** (ConflictRule r)
- void **writeSettings** (KConfigGroup &group)

## 9.568 Digikam::FileSaveOptionsBox Class Reference

Inheritance diagram for Digikam::FileSaveOptionsBox:

### Public Types

- enum `FORMAT` {  
`NONE = 0`, `JPEG`, `PNG`, `TIFF`,  
`JP2K`, `PGF`, `HEIF`, `JXL`,  
`WEBP`, `AVIF` }

### Public Member Functions

- `FileSaveOptionsBox` (`QWidget *const parent=nullptr`)  
*Constructor.*
- `~FileSaveOptionsBox` () override  
*Destructor.*
- void `applySettings` ()
- `FORMAT` `discoverFormat` (`const QString &filename`, `FORMAT` `fallback=NONE`)  
*Tries to discover a file format that has options to change based on a filename.*
- void `setImageFileFormat` (`const QString &`)

## 9.568.1 Member Enumeration Documentation

### 9.568.1.1 FORMAT

```
enum Digikam::FileSaveOptionsBox::FORMAT
```

## Enumerator

NONE	<p>Warning</p> <p>Order is important here. See filesaveoptionbox.cpp which use these values to fill a stack of widgets.</p>
------	---

## 9.568.2 Constructor & Destructor Documentation

### 9.568.2.1 FileSaveOptionsBox()

```
Digikam::FileSaveOptionsBox::FileSaveOptionsBox (
    QWidget *const parent = nullptr ) [explicit]
```

Don't forget to call setDialog after creation of the dialog.

## Parameters

<i>parent</i>	the parent for Qt's parent child mechanism
---------------	--

## 9.568.3 Member Function Documentation

### 9.568.3.1 discoverFormat()

```
FileSaveOptionsBox::FORMAT Digikam::FileSaveOptionsBox::discoverFormat (
    const QString & filename,
    FileSaveOptionsBox::FORMAT fallback = NONE )
```

## Parameters

<i>filename</i>	file name to discover the desired format from
<i>fallback</i>	the fallback format to return if no format could be discovered based on the filename

**Returns**

file format guessed from the file name or the given fallback format if no format could be guessed based on the file name

## 9.569 Digikam::FileSaveOptionsDlg Class Reference

## Public Member Functions

- **FilterAction** (const QString &identifier, int version, Category category=ReproducibleFilter)
- void **addFlag** (Flags flags)
- void **addParameter** (const QString &key, const QVariant &value)
  - Sets parameter, removing all other values for the same key.*
- Category **category** () const
- void **clearParameters** ()
  - Clear all parameters.*
- QString **description** () const
  - Returns a description / comment for this action.*
- QString **displayName** () const
- Flags **flags** () const
- bool **hasParameter** (const QString &key) const
- bool **hasParameters** () const
  - Access parameters.*
- QString **identifier** () const
  - Returns a technical identifier for the filter used to produce this action.*
- bool **isNull** () const
- bool **operator==** (const FilterAction &other) const
- QVariant & **parameter** (const QString &key)
- const QVariant **parameter** (const QString &key) const
- template<typename T >
  - T **parameter** (const QString &key) const
    - Returns parameter converted from QVariant to given type.*
- template<typename T >
  - T **parameter** (const QString &key, const T &defaultValue) const
    - Read parameter with a default value: If there is a parameter for the given key, return it converted from QVariant to the template type.*
- QHash< QString, QVariant > & **parameters** ()
- const QHash< QString, QVariant > & **parameters** () const
- void **removeFlag** (Flags flags)
- void **removeParameters** (const QString &key)
  - Removes all parameters for key.*
- void **setDescription** (const QString &description)
- void **setDisplayName** (const QString &displayName)
- void **setFlags** (Flags flags)
- void **setParameters** (const QHash< QString, QVariant > &params)
  - Replaces parameters.*
- int **version** () const
  - Returns the version (>= 1) of the filter used to produce this action.*

## Protected Attributes

- Category **m\_category** = ReproducibleFilter
- QString **m\_description**
- QString **m\_displayableName**
- Flags **m\_flags**
- QString **m\_identifier**
- QHash< QString, QVariant > **m\_params**
- int **m\_version** = 0

## 9.580.1 Member Enumeration Documentation

### 9.580.1.1 Category

enum `Digikam::FilterAction::Category`

## Enumerator

ReproducibleFilter	When given the set of stored parameters and the original data, an identical result will be produced.  <b>Note</b>  Do not change existing values, they are written to XML in files!
ComplexFilter	The operation is documented and a number of parameters may be known, but the identical result cannot be reproduced. It may be possible to produce a sufficiently similar result.
DocumentedHistory	The source images are known, a textual description may be added, but there is no way to automatically replay.

**9.580.1.2 Flag**

```
enum Digikam::FilterAction::Flag
```

## Enumerator

ExplicitBranch	The editing step of this filter action explicitly branches from the parent. This is an optional hint that the result is meant as a new version.
----------------	---

**9.580.2 Member Function Documentation****9.580.2.1 description()**

```
QString Digikam::FilterAction::description ( ) const
```

In the case of DocumentedHistory, this may be the most useful value.

**9.580.2.2 hasParameters()**

```
bool Digikam::FilterAction::hasParameters ( ) const
```

A parameters is a key -> value pair. Keys need to be unique.

**9.580.2.3 identifier()**

```
QString Digikam::FilterAction::identifier ( ) const
```

Can include a namespace. Example: digikam:charcoal

#### 9.580.2.4 parameter()

```
template<typename T >
T Digikam::FilterAction::parameter (
    const QString & key,
    const T & defaultValue ) const [inline]
```

If there is no parameter, return the given default value.

#### 9.580.2.5 version()

```
int Digikam::FilterAction::version ( ) const
```

When a filter / tool is found by the identifier, it can decide by the version if it supports this action and which parameters it expects.

### 9.580.3 Member Data Documentation

#### 9.580.3.1 m\_category

```
Category Digikam::FilterAction::m_category = ReproducibleFilter [protected]
```

## Note

Value class, do not create a d-pointer

## 9.581 Digikam::FilterActionFilter Class Reference

Inheritance diagram for Digikam::FilterActionFilter:

## Public Member Functions

- **FilterActionFilter** (QObject \*const parent=nullptr)
  - A meta-filter applying other filter according to a list of FilterActions.*
- void **addFilterAction** (const [FilterAction](#) &action)
- void **addFilterActions** (const QList< [FilterAction](#) > &actions)
- QList< [FilterAction](#) > **appliedFilterActions** () const
  - Returns the list of applied filter actions.*
- bool **completelyApplied** () const
  - After the thread was run, you can find out if application was successful.*
- [FilterAction](#) **failedAction** () const
- int **failedActionIndex** () const
- QString **failedActionMessage** () const
- [FilterAction](#) **filterAction** () override
  - These methods do not make sense here.*
- QList< [FilterAction](#) > **filterActions** () const
- QString **filterIdentifier** () const override
  - Return the identifier for this filter in the image history.*
- bool **isComplexAction** () const
  - Returns true if all FilterActions are reproducible or are ComplexFilters.*
- bool **isReproducible** () const
  - Returns true if all FilterActions are reproducible.*
- bool **isSupported** () const
  - Returns true if all actions are supported.*
- void **readParameters** (const [FilterAction](#) &) override
- void **setContinueOnError** (bool cont)
  - Per default, the filter will stop when it encounters an unsupported action.*
- void **setFilterAction** (const [FilterAction](#) &action)
- void **setFilterActions** (const QList< [FilterAction](#) > &actions)
  - Set - or add to existing list - the given filter actions.*

## Public Member Functions inherited from [Digikam::DImgThreadedFilter](#)

*The progress span that a slave filter uses in the parent filter's progress.*
- [int m\\_progressCurrent](#) = 0  
*To prevent signals bombarding with progress indicator value in [postProgress\(\)](#).*
- [int m\\_progressSpan](#) = 0
- [DImgThreadedFilter \\* m\\_slave](#) = nullptr  
*The current slave.*
- [int m\\_version](#) = 1
- [bool m\\_wasCancelled](#) = false

### 9.581.1 Member Function Documentation

#### 9.581.1.1 [appliedFilterActions\(\)](#)

```
QList< FilterAction > Digikam::FilterActionFilter::appliedFilterActions ( ) const
```

This is probably identical to [filterActions](#), but it can differ in some situations:

- if [completelyApplied\(\)](#) is false, it will contain only the successful actions
- the list is regenerated by the filters. If [filterActions](#) contains actions with an older version, still supported by the filter, the filter will now possibly return the newer, current version

#### 9.581.1.2 [completelyApplied\(\)](#)

```
bool Digikam::FilterActionFilter::completelyApplied ( ) const
```

A precondition is that at least [isComplexAction\(\)](#) and [isSupported\(\)](#) returns true. If all filters applied cleanly, [completelyApplied\(\)](#) returns true. [appliedActions\(\)](#) returns all applied actions, if [completelyApplied\(\)](#), the same as [filterActions\(\)](#). If not [completelyApplied](#), [failedAction\(\)](#) returns the action that failed, [failedActionIndex](#) its index in [filterActions\(\)](#), and [failedActionMessage](#) an optional error message. Note that [finished\(true\)](#) does not mean that [completelyApplied\(\)](#) is also true.

#### 9.581.1.3 [filterAction\(\)](#)

```
FilterAction Digikam::FilterActionFilter::filterAction ( ) [inline], [override], [virtual]
```

Use [filterActions](#).

Implements [Digikam::DImgThreadedFilter](#).

#### 9.581.1.4 filterIdentifier()

```
QString Digikam::FilterActionFilter::filterIdentifier ( ) const [inline], [override], [virtual]
```

Implements [Digikam::DImgThreadedFilter](#).

#### 9.581.1.5 filterImage()

```
void Digikam::FilterActionFilter::filterImage ( ) [override], [protected], [virtual]
```

Override in subclass.

Implements [Digikam::DImgThreadedFilter](#).

#### 9.581.1.6 isComplexAction()

```
bool Digikam::FilterActionFilter::isComplexAction ( ) const
```

That means the identical result may not be reproducible, but a sufficiently similar result may be available and apply will probably complete.

#### 9.581.1.7 readParameters()

```
void Digikam::FilterActionFilter::readParameters (
    const FilterAction & ) [inline], [override], [virtual]
```

Implements [Digikam::DImgThreadedFilter](#).

#### 9.581.1.8 setContinueOnError()

```
void Digikam::FilterActionFilter::setContinueOnError (
    bool cont )
```

If you want it to continue, set this to true. Only the last occurred error will then be reported.

## 9.582 Digikam::FiltersHistoryWidget Class Reference

Inheritance diagram for Digikam::FiltersHistoryWidget:

### Public Slots

- void **clearData** ()
- void **disableEntries** (int count)
- void **enableEntries** (int count)
- void **setEnabledEntries** (int count)
- void **setHistory** (const [DImageHistory](#) &history)
- void **showCustomContextMenu** (const QPoint &position)

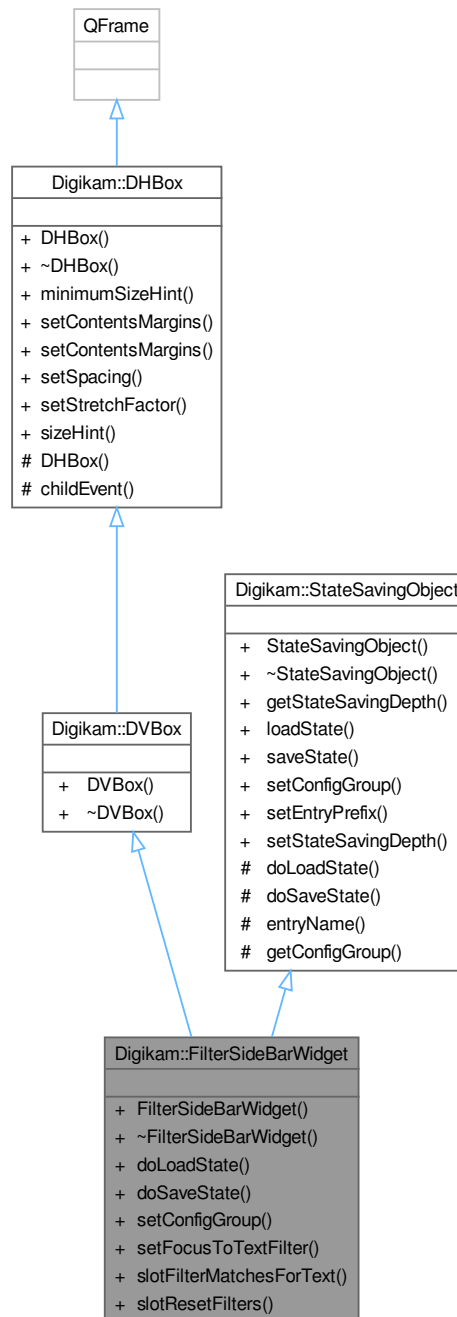

### Public Member Functions

- **FiltersHistoryWidget** (QWidget \*const parent)
- void **setCurrentURL** (const QUrl &url=QUrl())

## 9.583 Digikam::FilterSideBarWidget Class Reference

[Sidebar](#) widget containing the all filter widgets.

Inheritance diagram for Digikam::FilterSideBarWidget:

### Public Slots

- void **slotFilterMatchesForText** (bool)
- void **slotResetFilters** ()

*Resets all selected filters.*

## Signals

- void **signalGeolocationFilterChanged** ([ItemFilterSettings::GeolocationCondition](#))
- void **signalMimeTypeFilterChanged** (int)
- void **signalRatingFilterChanged** (int, [ItemFilterSettings::RatingCondition](#), bool)
- void **signalSearchTextFilterChanged** (const [SearchTextFilterSettings](#) &)
- void **signalTagFilterChanged** (const QList< int > &includedTags, const QList< int > &excludedTags, [ItemFilterSettings::MatchingCondition](#) matchingCond, bool showUnTagged, const QList< int > &clTagIds, const QList< int > &plTagIds)

*Emitted if the selected filter has changed.*

## Public Member Functions

- [FilterSideBarWidget](#) (QWidget \*const parent, [TagModel](#) \*const tagFilterModel)  
*Constructor.*
- [~FilterSideBarWidget](#) () override  
*Destructor.*
- void [doLoadState](#) () override  
*Implement this hook method for state loading.*
- void [doSaveState](#) () override  
*Implement this hook method for state saving.*
- void [setConfigGroup](#) (const KConfigGroup &group) override  
*Sets a dedicated config group that will be used to store and reload the state from.*
- void [setFocusToTextFilter](#) ()

## Public Member Functions inherited from [Digikam::DVBox](#)

- [DVBox](#) (QWidget \*const parent=nullptr)

## Public Member Functions inherited from [Digikam::DHBox](#)

- [DHBox](#) (QWidget \*const parent=nullptr)
- QSize [minimumSizeHint](#) () const override
- void [setContentsMargins](#) (const QMargins &margins)
- void [setContentsMargins](#) (int left, int top, int right, int bottom)
- void [setSpacing](#) (int space)
- void [setStretchFactor](#) (QWidget \*const widget, int stretch)
- QSize [sizeHint](#) () const override

## Public Member Functions inherited from [Digikam::StateSavingObject](#)

- [StateSavingObject](#) (QObject \*const host)  
*Constructor.*
- virtual [~StateSavingObject](#) ()  
*Destructor.*
- [StateSavingDepth](#) [getStateSavingDepth](#) () const  
*Returns the depth used for state saving or loading.*
- void [loadState](#) ()  
*Invokes loading the class' state.*
- void [saveState](#) ()  
*Invokes saving the class' state.*
- virtual void [setEntryPrefix](#) (const QString &prefix)  
*Define a prefix that will be used for every entry in the config group.*
- void [setStateSavingDepth](#) (const [StateSavingDepth](#) depth)  
*Sets the depth used for state saving or loading.*

## Additional Inherited Members

### Public Types inherited from [Digikam::StateSavingObject](#)

- enum [StateSavingDepth](#) { [INSTANCE](#) , [DIRECT\\_CHILDREN](#) , [RECURSIVE](#) }

*This enum defines the "depth" of the [StateSavingObject::loadState\(\)](#) and [StateSavingObject::saveState\(\)](#) methods.*

### Protected Member Functions inherited from [Digikam::DHBox](#)

- [DHBox](#) (bool vertical, QWidget \*const parent)
- void [childEvent](#) (QChildEvent \*e) override

### Protected Member Functions inherited from [Digikam::StateSavingObject](#)

- QString [entryName](#) (const QString &base) const  
*Always use this method to create config group entry names.*
- KConfigGroup [getConfigGroup](#) () const

*Returns the config group that must be used for state saving and loading.*

## 9.583.1 Detailed Description

### Author

jwienke

## 9.583.2 Constructor & Destructor Documentation

### 9.583.2.1 [FilterSideBarWidget\(\)](#)

```
Digikam::FilterSideBarWidget::FilterSideBarWidget (
    QWidget *const parent,
    TagModel *const tagFilterModel ) [explicit]
```

#### Parameters

<i>parent</i>	the parent for qt parent child mechanism
<i>tagFilterModel</i>	tag model to work on

## 9.583.3 Member Function Documentation

### 9.583.3.1 [doLoadState\(\)](#)

```
void Digikam::FilterSideBarWidget::doLoadState ( ) [override], [virtual]
```

Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

**9.583.3.2 doSaveState()**

```
void Digikam::FilterSideBarWidget::doSaveState ( ) [override], [virtual]
```

Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

**9.583.3.3 setConfigGroup()**

```
void Digikam::FilterSideBarWidget::setConfigGroup (
    const KConfigGroup & group ) [override], [virtual]
```

If this method is not called, a group based on the object name is used.

You can re-implement this method to pass the group set here to child objects. Don't forget to call this method in your implementation.

**Parameters**

<i>group</i>	config group to use for state saving and restoring
--------------	--

Reimplemented from [Digikam::StateSavingObject](#).

**9.583.3.4 signalTagFilterChanged**

```
void Digikam::FilterSideBarWidget::signalTagFilterChanged (
    const QList< int > & includedTags,
    const QList< int > & excludedTags,
    ItemFilterSettings::MatchingCondition matchingCond,
    bool showUnTagged,
    const QList< int > & clTagIds,
    const QList< int > & plTagIds ) [signal]
```

**Parameters**

<i>includedTags</i>	a list of included tag ids
<i>excludedTags</i>	a list of excluded tag ids
<i>matchingCond</i>	condition to join the selected tags
<i>showUnTagged</i>	if this is true, only photos without a tag shall be shown
<i>clTagIds</i>	a list of color label tag ids
<i>plTagIds</i>	a list of pick label tag ids

## 9.584 Digikam::FilterStatusBar Class Reference

Inheritance diagram for Digikam::FilterStatusBar:

### Public Slots

- void **slotFilterMatches** (bool)
- void **slotFilterSettingsChanged** (const [ItemFilterSettings](#) &settings)

### Signals

- void **signalPopupFiltersView** ()
- void **signalResetFilters** ()

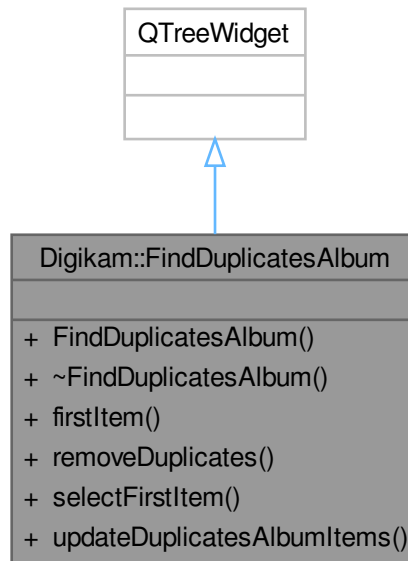

### Public Member Functions

- **FilterStatusBar** (QWidget \*const parent)

## 9.585 Digikam::FindDuplicatesAlbum Class Reference

The [FindDuplicatesAlbum](#) class Widgets used to show all reference images.

Inheritance diagram for Digikam::FindDuplicatesAlbum:

### Public Member Functions

- **FindDuplicatesAlbum** (`QWidget *const parent=nullptr`)
- `QTreeWidgetItem * firstItem ()`
- void **removeDuplicates** ()
- void **selectFirstItem** ()
- void **updateDuplicatesAlbumItems** (`const QList< SAlbum * > &sAlbumsToRebuild, const QList< qlong-long > &deletedImages`)

## 9.586 Digikam::FindDuplicatesAlbumItem Class Reference

Inheritance diagram for Digikam::FindDuplicatesAlbumItem:

### Public Types

- enum `Column` {  
**REFERENCE\_IMAGE** = 0 , **REFERENCE\_DATE** = 1 , **REFERENCE\_ALBUM** = 2 , **RESULT\_COUNT** = 3 ,  
**AVG\_SIMILARITY** = 4 }

### Public Member Functions

- `FindDuplicatesAlbumItem` (`QTreeWidgetItem *const parent`, `SAlbum *const album`)
- `SAlbum * album` () const
- void `calculateInfos` (const `QList< qlonglong >` &deletedImages=`QList< qlonglong >()`)  
*Calculates the duplicates count and average similarity.*
- `QList< ItemInfo > duplicatedItems` ()
- bool `hasValidThumbnail` () const
- int `itemCount` () const  
*Returns the item count.*
- bool `operator<` (const `QTreeWidgetItem &other`) const override
- `QUrl refUrl` () const
- void `setThumb` (const `QPixmap &pix`, bool hasThumb=true)

## 9.587 Digikam::FindDuplicatesView Class Reference

Inheritance diagram for Digikam::FindDuplicatesView:

### Public Slots

- void **slotRemoveDuplicates** ()
- void **slotSetSelectedAlbums** (const QList< [PAlbum](#) \* > &albums)
- void **slotSetSelectedAlbums** (const QList< [TAlbum](#) \* > &albums)

### Signals

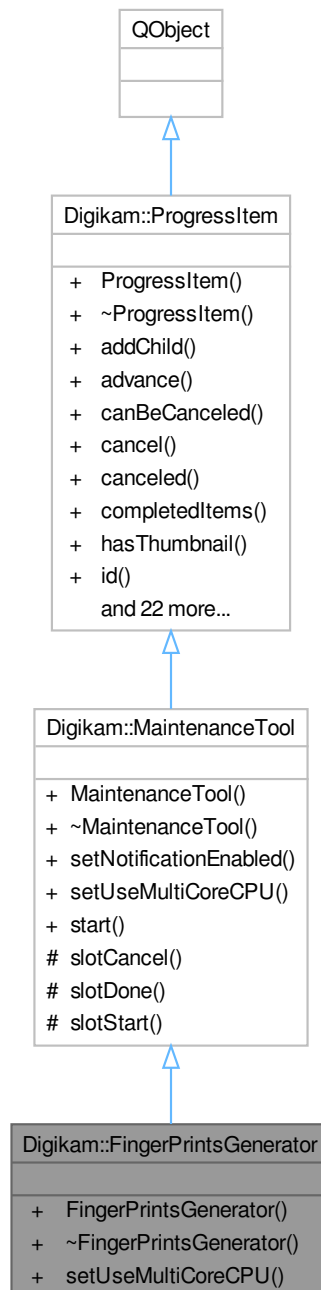

- void **signalScanNotification** (const QString &msg, int type)

### Public Member Functions

- **FindDuplicatesView** (QWidget \*const parent=nullptr)
- QList< [SAlbum](#) \* > **currentFindDuplicatesAlbums** () const
- void **populateTreeView** ()
- void **setActive** (bool val)

## 9.588 Digikam::FingerPrintsGenerator Class Reference

Inheritance diagram for Digikam::FingerPrintsGenerator:

### Signals

- void **signalScanNotification** (const QString &msg, int type)

## Signals inherited from [Digikam::MaintenanceTool](#)

- void **signalCanceled** ()  
*Emit when process is canceled.*
- void **signalComplete** ()  
*Emit when process is done (not canceled).*

## Signals inherited from [Digikam::ProgressItem](#)

- void [progressItemAdded](#) ([ProgressItem](#) \*item)  
*Emitted when a new [ProgressItem](#) is added.*
- void [progressItemCanceled](#) ([ProgressItem](#) \*item)  
*Emitted when an item was canceled.*
- void **progressItemCanceledById** (const QString &id)
- void [progressItemCompleted](#) ([ProgressItem](#) \*item)  
*Emitted when a progress item was completed.*
- void [progressItemLabel](#) ([ProgressItem](#) \*item, const QString &label)  
*Emitted when the label of an item changed.*
- void [progressItemProgress](#) ([ProgressItem](#) \*item, unsigned int v)  
*Emitted when the progress value of an item changes.*
- void [progressItemStatus](#) ([ProgressItem](#) \*item, const QString &mess)  
*Emitted when the status message of an item changed.*
- void [progressItemThumbnail](#) ([ProgressItem](#) \*item, const QPixmap &thumb)  
*Emitted when the thumbnail data must be set in item.*
- void [progressItemUsesBusyIndicator](#) ([ProgressItem](#) \*item, bool value)  
*Emitted when the busy indicator state of an item changes.*

## Public Member Functions

- [FingerPrintsGenerator](#) (const bool rebuildAll, const AlbumList &list=AlbumList(), [ProgressItem](#) \*const parent=nullptr)  
*Constructor using AlbumList as argument.*
- void [setUseMultiCoreCPU](#) (bool b) override  
*Re-implement this method if your tool is able to use multi-core CPU to process item in parallel.*

## Public Member Functions inherited from [Digikam::MaintenanceTool](#)

- **MaintenanceTool** (const QString &id, [ProgressItem](#) \*const parent=nullptr)
- void **setNotificationEnabled** (bool b)  
*If true, show a notification message on desktop notification manager with time elapsed to run process.*

## Public Member Functions inherited from [Digikam::ProgressItem](#)

- **ProgressItem** ([ProgressItem](#) \*const [parent](#), const QString &[id](#), const QString &[label](#), const QString &[status](#), bool [canBeCanceled](#), bool hasThumb)
- void **addChild** ([ProgressItem](#) \*const kiddo)
- bool [advance](#) (unsigned int v)
  - Advance total items processed by n values and update percentage in progressbar.*
- bool [canBeCanceled](#) () const
- void **cancel** ()
- bool **canceled** () const
- unsigned int **completedItems** () const
- bool [hasThumbnail](#) () const
- const QString & [id](#) () const
- bool **incCompletedItems** (unsigned int v=1)
- void **incTotalItems** (unsigned int v=1)
- const QString & [label](#) () const
- [ProgressItem](#) \* [parent](#) () const
- unsigned int [progress](#) () const
- void **removeChild** ([ProgressItem](#) \*const kiddo)
- void **reset** ()
  - Reset the progress value of this item to 0 and the status string to the empty string.*
- void [setComplete](#) ()
  - Tell the item it has finished.*
- bool **setCompletedItems** (unsigned int v)
- void [setLabel](#) (const QString &v)
- void [setProgress](#) (unsigned int v)
  - Set the progress (percentage of completion) value of this item.*
- void [setShowAtStart](#) (bool [showAtStart](#))
  - Set the property to pop-up item when it's added in progress manager.*
- void [setStatus](#) (const QString &v)
  - Set the string to be used for showing this item's current status.*
- void [setThumbnail](#) (const QIcon &icon)
  - Sets whether this item has a thumbnail.*
- void **setTotalItems** (unsigned int v)
- void [setUsesBusyIndicator](#) (bool useBusyIndicator)
  - Sets whether this item uses a busy indicator instead of real progress for its progress bar.*
- bool [showAtStart](#) () const
- const QString & [status](#) () const
- bool **totalCompleted** () const
- unsigned int **totalItems** () const
- void **updateProgress** ()
  - Recalculate progress according to total/completed items and update.*
- bool [usesBusyIndicator](#) () const

## Additional Inherited Members

## Public Slots inherited from [Digikam::MaintenanceTool](#)

- void **start** ()

## Protected Slots inherited from [Digikam::MaintenanceTool](#)

- virtual void **slotCancel** ()
- virtual void **slotDone** ()
- virtual void **slotStart** ()

### 9.588.1 Constructor & Destructor Documentation

#### 9.588.1.1 FingerPrintsGenerator()

```
Digikam::FingerPrintsGenerator::FingerPrintsGenerator (
    const bool rebuildAll,
    const AlbumList & list = AlbumList(),
    ProgressItem *const parent = nullptr ) [explicit]
```

If list is empty, whole Albums collection is processed.

### 9.588.2 Member Function Documentation

#### 9.588.2.1 setUseMultiCoreCPU()

```
void Digikam::FingerPrintsGenerator::setUseMultiCoreCPU (
    bool ) [override], [virtual]
```

Reimplemented from [Digikam::MaintenanceTool](#).

## 9.589 Digikam::FingerprintsTask Class Reference

Inheritance diagram for Digikam::FingerprintsTask:

### Signals

- void **signalFinished** (const [ItemInfo](#) &, const QImage &)

### Signals inherited from [Digikam::ActionJob](#)

- void **signalDone** ()
  - Use this signal in your implementation to inform [ActionThreadBase](#) manager the job is done.*
- void **signalProgress** (int)
  - Use this signal in your implementation to inform [ActionThreadBase](#) manager the job progress.*
- void **signalStarted** ()
  - Use this signal in your implementation to inform [ActionThreadBase](#) manager that job is started.*

### Public Member Functions

- void **setMaintenanceData** ([MaintenanceData](#) \*const data=nullptr)
- void **setRebuildAll** (bool b)

### Public Member Functions inherited from [Digikam::ActionJob](#)

- **ActionJob** (QObject \*const parent=nullptr)  
*Constructor which delegate deletion of QRunnable instance to [ActionThreadBase](#), not QThreadPool.*
- **~ActionJob** () override  
*Re-implement destructor in you implementation.*

### Protected Member Functions

- void **run** () override

### Additional Inherited Members

### Public Slots inherited from [Digikam::ActionJob](#)

- void **cancel** ()  
*Call this method to cancel job.*

### Public Attributes inherited from [Digikam::ActionJob](#)

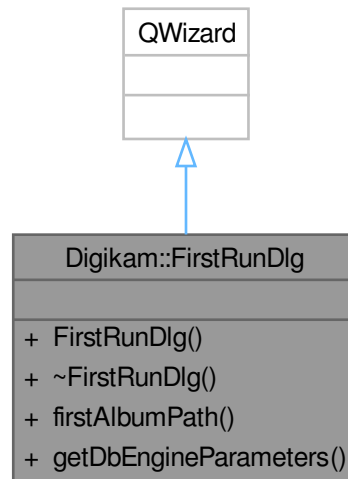

- QElapsedTimer **m\_timer**  
*Timer to determine the running time of the job.*

### Protected Attributes inherited from [Digikam::ActionJob](#)

- bool **m\_cancel** = false  
*You can use this boolean in your implementation to know if job must be canceled.*

## 9.590 Digikam::FirstRunDlg Class Reference

Inheritance diagram for Digikam::FirstRunDlg:

### Public Member Functions

- **FirstRunDlg** (`QWidget *const parent=nullptr`)
- `QString` **firstAlbumPath** () const
- `DbEngineParameters` **getDbEngineParameters** () const

## 9.591 Digikam::FocusPoint Class Reference

### Public Types

- enum `TypePoint` { `Inactive` = 0 , `InFocus` = 1 , `Selected` = 2 , `SelectedInFocus` = 3 }

### Public Member Functions

- **FocusPoint** (const `FocusPoint` &other)
- **FocusPoint** (const `QRectF` &rectF)
- **FocusPoint** (float x\_position, float y\_position, float width, float height)
- `FocusPoint` (float x\_position, float y\_position, float width, float height, `TypePoint` type)
  - Focus point container constructors.*
- `QPointF` **getCenterPosition** () const
- `QRectF` **getRect** () const
- `QRect` **getRectBySize** (const `QSize` &size) const
  - Return the real aera properties in image coordinates depending of the size.*
- `QSizeF` **getSize** () const

- [TypePoint](#) `getType ()` const
- `QString` `getTypeDescription ()` const
- [FocusPoint](#) & `operator=` (const [FocusPoint](#) &other)  
*Equivalent to the copy constructor.*
- void `setCenterPosition` (float `x_position`, float `y_position`)  
*Accessors to relative properties of focus point area.*
- void `setRect` (const `QRectF` &rectF)
- void `setSize` (float `width`, float `height`)
- void `setType` ([TypePoint](#) `type`)  
*Focus point type properties accessor.*

## 9.591.1 Member Enumeration Documentation

### 9.591.1.1 TypePoint

```
enum Digikam::FocusPoint::TypePoint
```

Enumerator

Inactive	The AF-point is not active.
InFocus	The AF-point is in focus.
Selected	The AF-point is selected but not in focus.
SelectedInFocus	The AF-point is selected and in focus.

## 9.591.2 Constructor & Destructor Documentation

### 9.591.2.1 FocusPoint()

```
Digikam::FocusPoint::FocusPoint (
    float x_position,
    float y_position,
    float width,
    float height,
    TypePoint type )
```

Position and size are in float and a relative to the original image size. Typically, the area is define as percents of values depending of image size used to extract information from metadata. Like this, focus area can be drawn easily over a resized version of image.

## 9.591.3 Member Function Documentation

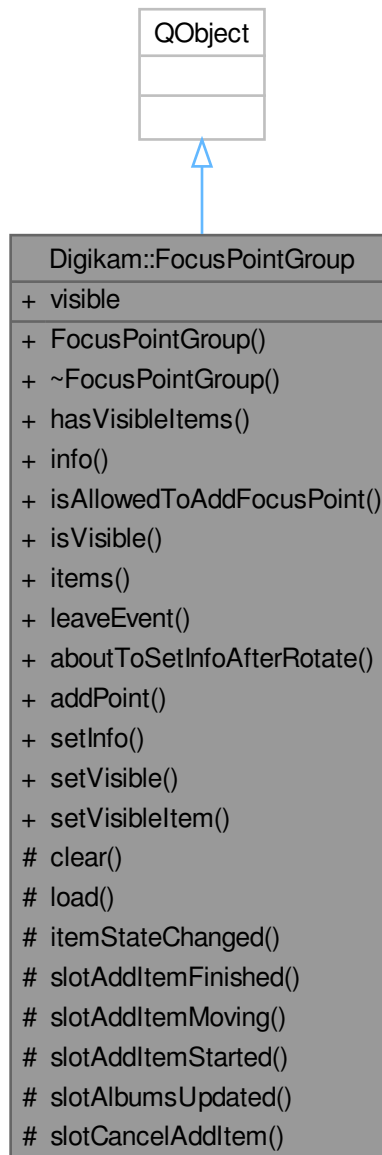

### 9.591.3.1 setType()

```
void Digikam::FocusPoint::setType (
    TypePoint type )
```

See [TypePoint](#) enum definition for details.

## 9.592 Digikam::FocusPointGroup Class Reference

Inheritance diagram for Digikam::FocusPointGroup:

### Public Slots

- void **aboutToSetInfoAfterRotate** (const [ItemInfo](#) &info)
- void **addPoint** ()
- void **setInfo** (const [ItemInfo](#) &info)
  - Sets the current [ItemInfo](#).
- void **setVisible** (bool visible)
  - Shows or hides the frames.
- void **setVisibleItem** ([RegionFrameItem](#) \*const item)

## Public Member Functions

- **FocusPointGroup** ([GraphicsDImgView](#) \*const view)
- bool **hasVisibleItems** () const
- [ItemInfo](#) **info** () const
- bool **isAllowedToAddFocusPoint** () const
- bool **isVisible** () const
- QList< [RegionFrameItem](#) \* > **items** () const
- void **leaveEvent** (QEvent \*)

## Protected Slots

- void **itemStateChanged** (int)
- void **slotAddItemFinished** (const QRectF &rect)
- void **slotAddItemMoving** (const QRectF &rect)
- void **slotAddItemStarted** (const QPointF &pos)
- void **slotAlbumsUpdated** (int type)
- void **slotCancelAddItem** ()

## Protected Member Functions

- void **clear** ()
- void **load** ()

## Properties

- bool **visible**

## 9.593 Digikam::FocusPointItem Class Reference

Inheritance diagram for Digikam::FocusPointItem:

### Public Member Functions

- **FocusPointItem** (`QGraphicsItem *const parent`)
- **FocusPoint point** () const
- void **setEditable** (bool allowEdit)
- void **setPoint** (const [FocusPoint](#) &point)

## Public Member Functions inherited from Digikam::RegionFrameItem

- **RegionFrameItem** (QGraphicsItem \*const parent)
- void **changeFlags** (Flags flags, bool addOrRemove)
- Flags **flags** () const
- QGraphicsWidget \* **hudWidget** () const
- void **setFixedRatio** (double ratio)
- void **setFlags** (Flags flags)
- void **setHudWidget** (QGraphicsWidget \*const hudWidget)
  - Sets a widget item as HUD item.*
- void **setHudWidget** (QWidget \*const widget, Qt::WindowFlags wFlags=Qt::WindowFlags())
- void **setHudWidgetVisible** (bool visible)
- void **setRectInSceneCoordinatesAdjusted** (const QRectF &rect)

## Public Member Functions inherited from Digikam::DImgChildItem

- **DImgChildItem** (QGraphicsItem \*const parent=nullptr)
  - This is a base class for items that are positioned on top of a [GraphicsDImgItem](#), positioned in relative coordinates, i.e.*
- QRectF **boundingRect** () const override
  - Reimplemented.*
- void **moveBy** (qreal dx, qreal dy)
- QPoint **originalPos** () const
- QRect **originalRect** () const
  - Returns the position and size in coordinates of the original image.*
- QSize **originalSize** () const
- [GraphicsDImgItem](#) \* **parentDImgItem** () const
  - If the parent item is a [GraphicsDImgItem](#), return it, if the parent item is null or of a different class, returns 0.*
- QRectF **rect** () const
  - Returns position and size of this item, in coordinates of the parent [DImg](#) with the current zoom.*
- QPointF **relativePos** () const
- QRectF **relativeRect** () const
  - Returns the position and size relative to the [DImg](#) displayed in the parent item.*
- QSizeF **relativeSize** () const
- void **setOriginalPos** (const QPointF &posInOriginal)
  - Sets the position and size of this item, in coordinates of the original image.*
- void **setOriginalPos** (qreal x, qreal y)
- void **setOriginalRect** (const QRectF &rect)
- void **setOriginalRect** (qreal x, qreal y, qreal width, qreal height)
- void **setOriginalSize** (const QSizeF &sizeInOriginal)
- void **setOriginalSize** (qreal width, qreal height)
- void **setPos** (const QPointF &zoomedPos)
  - Sets the position and size of this item, in coordinates of the parent [DImg](#) item.*
- void **setPos** (qreal x, qreal y)
- void **setRect** (const QRectF &rect)
- void **setRect** (qreal x, qreal y, qreal width, qreal height)
- void **setRectInSceneCoordinates** (const QRectF &rect)
  - Equivalent to mapping the scene coordinates to the parent item, and calling [setRect\(\)](#).*
- void **setRelativePos** (const QPointF &relativePosition)
  - Sets the position and size of this item, relative to the [DImg](#) displayed in the parent item.*
- void **setRelativePos** (qreal x, qreal y)
- void **setRelativeRect** (const QRectF &rect)
- void **setRelativeRect** (qreal x, qreal y, qreal width, qreal height)
- void **setRelativeSize** (const QSizeF &relativeSize)
- void **setRelativeSize** (qreal width, qreal height)
- void **setSize** (const QSizeF &zoomedSize)
- void **setSize** (qreal width, qreal height)
- QSizeF **size** () const

## Additional Inherited Members

### Public Types inherited from [Digikam::RegionFrameItem](#)

- enum **Flag** { **NoFlags** = 0 , **ShowResizeHandles** = 1 << 0 , **MoveByDrag** = 1 << 1 , **GeometryEditable** = ShowResizeHandles | MoveByDrag }
- typedef QFlags< Flag > **Flags**

- void **hoverMoveEvent** (QGraphicsSceneHoverEvent \*event) override
- void **mouseMoveEvent** (QGraphicsSceneMouseEvent \*) override
- void **mousePressEvent** (QGraphicsSceneMouseEvent \*) override
- void **mouseReleaseEvent** (QGraphicsSceneMouseEvent \*) override
- void **paint** (QPainter \*painter, const QStyleOptionGraphicsItem \*option, QWidget \*widget=nullptr) override

### Protected Member Functions inherited from [Digikam::DImgChildItem](#)

- QVariant **itemChange** (GraphicsItemChange change, const QVariant &value) override

## 9.594 Digikam::FocusPointsExtractor Class Reference

Inheritance diagram for Digikam::FocusPointsExtractor:

### Public Types

- using `ListAFPoints` = `QList< FocusPoint >`  
*A list used to store focus points of a image extracted from meta data.*

### Public Member Functions

- `FocusPointsExtractor` (`QObject *const parent`, `const QString &path`)
- `ListAFPoints get_af_points` ()
- `ListAFPoints get_af_points` (`FocusPoint::TypePoint` type)
- `bool isAFPointsReadOnly` () const
- `QString make` () const
- `QString model` () const
- `MetaEngine::ImageOrientation orientation` () const
- `QSize originalSize` () const

## 9.594.1 Member Typedef Documentation

### 9.594.1.1 ListAFPoints

```
using Digikam::FocusPointsExtractor::ListAFPoints = QList<FocusPoint>
```

With extract() function, an exiftool parser is used to read data from metadata and lists all focus points. Each focus point is defined by their relative centers coordinate and relative size. Each point has own type (Inactive, Infocus, Selected, SelectedInFocus)

## 9.595 Digikam::FocusPointsWriter Class Reference

Inheritance diagram for Digikam::FocusPointsWriter:

### Public Member Functions

- **FocusPointsWriter** (QObject \*const parent, const QString &path)
- void **writeFocusPoint** (const FocusPoint &point)
- void **writeFocusPoint** (const QRectF &rectF)

## 9.596 Digikam::FrameOsd Class Reference

### Public Member Functions

- void **insertMessageOsdToFrame** (QImage &frame, const QSize &JPEGsize, const QString &mess)  
*Insert message OSD on broken frame or end frame.*

- void **insertOsdToFrame** (QImage &frame, const QUrl &url, const [FrameOsdSettings](#) &settings, const [DInfoInterface](#) \*const info)  
*Insert OSD on frame.*
- void **populateOSD** (const QUrl &url, const [FrameOsdSettings](#) &settings, const [DInfoInterface](#) \*const info)  
*Populate OSD items properties base on Url.*
- void **printComments** (const QString &comments)  
*print comments*
- void **printTags** (QStringList &tags)  
*print tags*

### Public Attributes

- QString **m\_desc** = QLatin1String("")
- Qt::Alignment **m\_descAlign** = Qt::AlignLeft
- QColor **m\_descBg** = Qt::darkGray
- QFont **m\_descFnt** = QFont(QLatin1String("Monospace"))
- QPoint **m\_descPos** = QPoint(10, 10)

## 9.597 Digikam::FrameOsdSettings Class Reference

### Public Member Functions

- void **readSettings** (const KConfigGroup &group)  
*Read and write settings in config file between sessions.*
- void **writeSettings** (KConfigGroup &group)

### Public Attributes

- QFont **osdFont** = QFontDatabase::systemFont(QFontDatabase::GeneralFont)  
*Font for the display of osd text.*
- bool **printApertureFocal** = false  
*Print camera Aperture and Focal while streaming.*
- bool **printCapIfNoTitle** = false  
*Print image captions if no title available while streaming.*
- bool **printComment** = false  
*Print picture comment while streaming.*
- bool **printDate** = true  
*Print picture creation date while streaming.*
- bool **printExpoSensitivity** = false  
*Print camera Exposure and Sensitivity while streaming.*
- bool **printLensModel** = false  
*Print camera Lens model while streaming.*
- bool **printMakeModel** = false  
*Print camera Make and Model while streaming.*
- bool **printName** = true  
*Print picture file name while streaming.*
- bool **printRating** = false  
*Print rating while streaming.*
- bool **printTags** = false  
*Print tags title while streaming.*
- bool **printTitle** = false  
*Print image title while streaming.*

## 9.598 Digikam::FrameOsdWidget Class Reference

Inheritance diagram for Digikam::FrameOsdWidget:

### Signals

- void **signalSettingsChanged** ()

### Public Member Functions

- **FrameOsdWidget** (`QWidget *const parent`)
- void **setSettings** (`const FrameOsdSettings &settings`)
- **FrameOsdSettings settings** () const

## 9.599 Digikam::FrameUtils Class Reference

### Static Public Member Functions

- static QImage **makeFramedImage** (`const QString &file, const QSize &outSize`)
- static QImage **makeScaledImage** (`QImage &img, const QSize &outSize`)

## 9.600 Digikam::FreeRotationContainer Class Reference

### Public Types

- enum **AutoCropTypes** { `NoAutoCrop = 0` , `WidestArea` , `LargestArea` }

### Public Attributes

- double **angle** = 0.0
- bool **antiAlias** = true
- int **autoCrop** = NoAutoCrop
- QColor **backgroundColor** = Qt::black
- QSize **newSize**
- int **orgH** = 0
- int **orgW** = 0

## 9.601 Digikam::FreeRotationFilter Class Reference

Inheritance diagram for Digikam::FreeRotationFilter:

### Public Member Functions

- **FreeRotationFilter** (`Dimg *const orgImage`, `QObject *const parent=nullptr`, `const FreeRotationContainer &settings=FreeRotationContainer()`)

- **FreeRotationFilter** (QObject \*const parent=nullptr)
- **FilterAction filterAction** () override  
*Returns the action description corresponding to currently set options.*
- **QString filterIdentifier** () const override  
*Return the identifier for this filter in the image history.*
- **QSize getNewSize** () const
- void **readParameters** (const **FilterAction** &action) override

## Public Member Functions inherited from Digikam::DImgThreadedFilter

- **DImgThreadedFilter** (DImg \*const orgImage, QObject \*const parent, const QString &name=QString())  
*Constructs a filter with all arguments (ready to use).*
- **DImgThreadedFilter** (QObject \*const parent=nullptr, const QString &name=QString())  
*Constructs a filter without argument.*
- virtual void **cancelFilter** ()  
*Cancel the threaded computation.*
- const QString & **filterName** ()
- int **filterVersion** () const
- **DImg getTargetImage** ()
- QList< int > **multithreadedSteps** (int stop, int start=0) const  
*This method return a list of steps to process parallelized operation in filter using QtConcurrents API.*
- virtual bool **parametersSuccessfullyRead** () const  
*Optional: error handling for readParameters.*
- virtual QString **readParametersError** (const **FilterAction** &actionThatFailed) const
- void **setFilterName** (const QString &name)
- void **setFilterVersion** (int version)  
*Replaying a filter action: Set the filter version.*
- void **setOriginalImage** (const DImg &orgImage)
- void **setupAndStartDirectly** (const DImg &orgImage, DImgThreadedFilter \*const master, int progress←Begin=0, int progressEnd=100)  
*Initializes the filter for use as a slave and directly starts computation (in-thread)*
- void **setupFilter** (const DImg &orgImage)  
*You need to call this and then start filter of you used the constructor not setting an original image.*
- virtual void **startFilter** ()  
*Start the threaded computation.*
- virtual void **startFilterDirectly** ()  
*Start computation of this filter, directly in this thread.*
- virtual QList< int > **supportedVersions** () const

## Public Member Functions inherited from Digikam::DynamicThread

- **DynamicThread** (QObject \*const parent=nullptr)  
*This class extends QRunnable, so you have to reimplement virtual void run().*
- **~DynamicThread** () override  
*The destructor calls stop() and wait(), but if you, in your destructor, delete any data that is accessed by your run() method, you must call stop() and wait() before yourself.*
- bool **isFinished** () const
- bool **isRunning** () const
- **QThread::Priority priority** () const
- void **setEmitSignals** (bool emitThem)
- void **setPriority** (QThread::Priority priority)  
*Sets the priority for this dynamic thread.*
- State **state** () const

### Static Public Member Functions

### Additional Inherited Members

### Public Types inherited from [Digikam::DynamicThread](#)

- enum **State** { **Inactive** , **Scheduled** , **Running** , **Deactivating** }

### Public Slots inherited from [Digikam::DynamicThread](#)

- void **start** ()
- void **stop** ()  
*Stop computation, sets the running flag to false.*
- void **wait** ()  
*Waits until the thread finishes.*

### Signals inherited from [Digikam::DImgThreadedFilter](#)

- void **finished** (bool success)  
*Emitted when the computation has completed.*
- void **progress** (int progress)  
*Emitted when progress info from the calculation is available.*
- void **started** ()  
*This signal is emitted when image data is available and the computation has started.*

### Signals inherited from [Digikam::DynamicThread](#)

- void **finished** ()
- void **starting** ()  
*Emitted if emitSignals is enabled.*

## Protected Member Functions inherited from Digikam::DImgThreadedFilter

- [DImgThreadedFilter](#) ([DImgThreadedFilter](#) \*const master, const [DImg](#) &orgImage, const [DImg](#) &destImage, int progressBegin=0, int progressEnd=100, const QString &name=QString())  
*Support for chaining two filters as master and thread.*
- virtual void [cleanupFilter](#) ()  
*Clean up filter data if necessary, called by stopComputation() method.*
- virtual void [initFilter](#) ()  
*Start filter operation before threaded method.*
- void [initMaster](#) ()
- void [initSlave](#) ([DImgThreadedFilter](#) \*const master, int progressBegin=0, int progressEnd=100)  
*Initialize the filter for use as a slave - reroutes progress info to master.*
- virtual int [modulateProgress](#) (int progress)  
*This method modulates the progress value from the 0..100 span to the span of this slave.*
- void [postProgress](#) (int progress)  
*Emit progress info.*
- virtual void [prepareDestImage](#) ()
- void [run](#) () override  
*List of threaded operations by filter.*
- void [setSlave](#) ([DImgThreadedFilter](#) \*const slave)  
*Inform the master that there is currently a slave.*

## Protected Member Functions inherited from Digikam::DynamicThread

- bool [runningFlag](#) () const volatile  
*In you run() method, you shall regularly check for runningFlag() and cleanup and return if false.*
- void [shutDown](#) ()  
*If you are deleting data in your destructor which is accessed from the thread, do one of the following from your destructor to guarantee a safe shutdown: 1) Call this method 2) Call stop() and wait(), knowing that nothing will call start() anymore after this 3) Be sure the thread will never be running at destruction.*
- void [start](#) (QMutexLocker< QMutex > &locker)  
*Doing the same as start(), stop() and wait above, provide it with a locked QMutexLocker on mutex().*
- void [stop](#) (const QMutexLocker< QMutex > &locker)
- QMutex \* [threadMutex](#) () const  
*This is the non-recursive mutex used to protect state variables and waiting in this class.*

*Returns the config group that must be used for state saving and loading.*

## 9.607.1 Member Function Documentation

### 9.607.1.1 [applySettings\(\)](#)

```
void Digikam::FuzzySearchSideBarWidget::applySettings ( ) [override], [virtual]
```

Implements [Digikam::SidebarWidget](#).

### 9.607.1.2 [changeAlbumFromHistory\(\)](#)

```
void Digikam::FuzzySearchSideBarWidget::changeAlbumFromHistory (
    const QList< Album * > & album ) [override], [virtual]
```

Implements [Digikam::SidebarWidget](#).

### 9.607.1.3 [doLoadState\(\)](#)

```
void Digikam::FuzzySearchSideBarWidget::doLoadState ( ) [override], [virtual]
```

Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 9.607.1.4 [doSaveState\(\)](#)

```
void Digikam::FuzzySearchSideBarWidget::doSaveState ( ) [override], [virtual]
```

Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 9.607.1.5 `getCaption()`

```
const QString Digikam::FuzzySearchSideBarWidget::getCaption ( ) [override], [virtual]
```

#### Returns

localized title string

Implements [Digikam::SidebarWidget](#).

### 9.607.1.6 `getIcon()`

```
const QIcon Digikam::FuzzySearchSideBarWidget::getIcon ( ) [override], [virtual]
```

#### Returns

pixmap icon

Implements [Digikam::SidebarWidget](#).

### 9.607.1.7 `setActive()`

```
void Digikam::FuzzySearchSideBarWidget::setActive (
    bool active ) [override], [virtual]
```

#### Parameters

<i>active</i>	if true, this widget is the new active widget, if false another widget is active
---------------	--

Implements [Digikam::SidebarWidget](#).

## 9.608 Digikam::FuzzySearchView Class Reference

Inheritance diagram for Digikam::FuzzySearchView:

### Signals

- void **signalNotificationError** (const QString &message, int type)

## Public Member Functions

- **FuzzySearchView** ([searchModel](#) \*const searchModel, [searchModificationHelper](#) \*const searchModificationHelper, [QWidget](#) \*const parent=nullptr)
- [SAAlbum](#) \* **currentAlbum** () const
- void **doLoadState** () override  
*Implement this hook method for state loading.*
- void **doSaveState** () override  
*Implement this hook method for state saving.*
- void **newDuplicatesSearch** (const QList< [PAAlbum](#) \* > &albums)
- void **newDuplicatesSearch** (const QList< [TAAlbum](#) \* > &albums)
- void **setActive** (bool val)
- void **setConfigGroup** (const [KConfigGroup](#) &group) override  
*Sets a dedicated config group that will be used to store and reload the state from.*
- void **setCurrentAlbum** ([SAAlbum](#) \*const album)
- void **setItemInfo** (const [ItemInfo](#) &info)

## Public Member Functions inherited from [Digikam::StateSavingObject](#)

- [StateSavingObject](#) ([QObject](#) \*const host)  
*Constructor.*
- virtual **~StateSavingObject** ()  
*Destructor.*
- [StateSavingDepth](#) **getStateSavingDepth** () const  
*Returns the depth used for state saving or loading.*
- void **loadState** ()  
*Invokes loading the class' state.*
- void **saveState** ()  
*Invokes saving the class' state.*
- virtual void **setEntryPrefix** (const [QString](#) &prefix)  
*Define a prefix that will be used for every entry in the config group.*
- void **setStateSavingDepth** (const [StateSavingDepth](#) depth)  
*Sets the depth used for state saving or loading.*

## Protected Member Functions

- void **dragEnterEvent** ([QDragEnterEvent](#) \*e) override
- void **dragMoveEvent** ([QDragMoveEvent](#) \*e) override
- void **dropEvent** ([QDropEvent](#) \*e) override

## Protected Member Functions inherited from [Digikam::StateSavingObject](#)

- [QString](#) **entryName** (const [QString](#) &base) const  
*Always use this method to create config group entry names.*
- [KConfigGroup](#) **getConfigGroup** () const  
*Returns the config group that must be used for state saving and loading.*

## Additional Inherited Members

## Public Types inherited from [Digikam::StateSavingObject](#)

- enum [StateSavingDepth](#) { [INSTANCE](#) , [DIRECT\\_CHILDREN](#) , [RECURSIVE](#) }

*This enum defines the "depth" of the [StateSavingObject::loadState\(\)](#) and [StateSavingObject::saveState\(\)](#) methods.*

## 9.608.1 Member Function Documentation

### 9.608.1.1 doLoadState()

```
void Digikam::FuzzySearchView::doLoadState ( ) [override], [virtual]
```

Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 9.608.1.2 doSaveState()

```
void Digikam::FuzzySearchView::doSaveState ( ) [override], [virtual]
```

Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 9.608.1.3 setConfigGroup()

```
void Digikam::FuzzySearchView::setConfigGroup (
    const KConfigGroup & group ) [override], [virtual]
```

If this method is not called, a group based on the object name is used.

You can re-implement this method to pass the group set here to child objects. Don't forget to call this method in your implementation.

#### Parameters

<i>group</i>	config group to use for state saving and restoring
--------------	--

Reimplemented from [Digikam::StateSavingObject](#).

## 9.609 Digikam::GeoCoordinates Class Reference

### Public Types

- enum **HasFlag** {

```

## 9.610 Digikam::GeodeticCalculator Class Reference

### Public Member Functions

- [GeodeticCalculator](#) (const [Ellipsoid](#) &e=[Ellipsoid::WGS84](#)())  
*Performs geodetic calculations on an ellipsoid.*
- double [azimuth](#) ()  
*Returns the azimuth.*
- bool [checkOrthodromicDistance](#) ()  
*Computes the orthodromic distance using the algorithm implemented in the Geotools's ellipsoid class (if available), and check if the error is smaller than some tolerance error.*
- bool [computeDestinationPoint](#) ()  
*Computes the destination point from the starting point, the azimuth and the orthodromic distance.*
- bool [computeDirection](#) ()  
*Computes the azimuth and orthodromic distance from the startingGeographicPoint starting point and the destinationGeographicPoint destination point.*
- QPointF [destinationGeographicPoint](#) ()
- bool [destinationGeographicPoint](#) (double \*longitude, double \*latitude)  
*Returns the destination point.*
- [Ellipsoid ellipsoid](#) () const  
*Returns the referenced ellipsoid.*
- double [meridianArcLength](#) (double latitude1, double latitude2)  
*Calculates the meridian arc length between two points in the same meridian in the referenced ellipsoid.*
- double [meridianArcLengthRadians](#) (double P1, double P2)  
*Calculates the meridian arc length between two points in the same meridian in the referenced ellipsoid.*
- double [orthodromicDistance](#) ()  
*Returns the orthodromic distance.*
- void [setDestinationGeographicPoint](#) (double longitude, double latitude)  
*Set the destination point in geographic coordinates.*
- void [setDirection](#) (double [azimuth](#), double distance)  
*Set the azimuth and the distance from the startingGeographicPoint starting point.*
- void [setStartingGeographicPoint](#) (double longitude, double latitude)  
*Set the starting point in geographic coordinates.*

### Protected Member Functions

- double [castToAngleRange](#) (const double alpha)
- bool [checkAzimuth](#) (double \*azimuth)  
*Checks the azimuth validity.*
- bool [checkLatitude](#) (double \*latitude)  
*Checks the latitude validity.*
- bool [checkLongitude](#) (double \*longitude)  
*Checks the longitude validity.*
- bool [checkOrthodromicDistance](#) (const double distance)  
*Checks the orthodromic distance validity.*

## Protected Attributes

- double **a01** = 0.0

- bool **m\_destinationValid** = false

*Tell if the destination point is valid.*

- bool **m\_directionValid** = false

*Tell if the azimuth and the distance are valids.*

- double **m\_distance** = 0.0

*The distance and azimuth (in radians) from the starting point (long1, lat1) to the destination point (long2, lat2).*

- double **m\_E** = 0.0
- double **m\_eccentricitySquared** = 0.0

*The eccentricity squared of the referenced ellipsoid.*

- **Ellipsoid m\_ellipsoid**

*The encapsulated ellipsoid.*

- double **m\_F** = 0.0
- double **m\_lat1** = 0.0

*The (latitude, longitude) coordinate of the first point in radians.*

- double **m\_lat2** = 0.0

*The (latitude, longitude) coordinate of the destination point in radians.*

- double **m\_long1** = 0.0
- double **m\_long2** = 0.0
- double **m\_maxOrthodromicDistance** = 0.0

*The maximum orthodromic distance that could be calculated onto the referenced ellipsoid.*

- double **m\_semiMajorAxis** = 0.0

*The semi major axis of the referenced ellipsoid.*

- double **m\_semiMinorAxis** = 0.0

*The semi minor axis of the referenced ellipsoid.*

- double **m\_TOLERANCE\_0** = 5.0e-15

*Tolerance factors from the strictest (TOLERANCE\_0) to the most relax one (TOLERANCE\_3).*

- double **m\_TOLERANCE\_1** = 5.0e-14
- double **m\_TOLERANCE\_2** = 5.0e-13

- double `m_TOLERANCE_3` = 7.0e-3
- double `m_TOLERANCE_CHECK` = 1E-8  
*Tolerance factor for assertions.*
- double `T1` = 1.0  
*Parameters computed from the ellipsoid.*
- double `T2` = 0.0
- double `T4` = 0.0
- double `T6` = 0.0

## 9.610.1 Constructor & Destructor Documentation

### 9.610.1.1 GeodeticCalculator()

```
Digikam::GeodeticCalculator::GeodeticCalculator (
    const Ellipsoid & e = Ellipsoid::WGS84() ) [explicit]
```

This class encapsulates a generic ellipsoid and calculates the following properties:

Distance and azimuth between two points. Point located at a given distance and azimuth from an other point.

The calculation use the following information:

The starting position (`setStartingPosition`), which is always considered valid. It is initially set at (0,0) and can only be changed to another legitimate value. Only one of the following:

The destination position (`setDestinationPosition`), or  
An azimuth and distance (`setDirection`).

The latest one set overrides the other and determines what will be calculated.

## 9.610.2 Member Function Documentation

### 9.610.2.1 azimuth()

```
double Digikam::GeodeticCalculator::azimuth ( )
```

This method returns the value set by the last call to `setDirection(double, double)` `setDirection(azimuth, distance)`, except if `setDestinationGeographicPoint(double, double)` `setDestinationGeographicPoint(...)` has been invoked after. In this later case, the azimuth will be computed from the startingGeographicPoint starting point to the destination point.

#### Returns

The azimuth, in decimal degrees from -180° to +180°.

### 9.610.2.2 checkAzimuth()

```
bool Digikam::GeodeticCalculator::checkAzimuth (
    double * azimuth ) [protected]
```

The argument `azimuth` should be greater or equal than -180 degrees and lower or equals than +180 degrees. As a convenience, this method converts the azimuth to radians.

**Parameters**

<i>azimuth</i>	The azimuth value in decimal degrees.
----------------	---------------------------------------

**9.610.2.3 checkLatitude()**

```
bool Digikam::GeodeticCalculator::checkLatitude (
    double * latitude ) [protected]
```

The argument *latitude* should be greater or equal than -90 degrees and lower or equals than +90 degrees. As a convenience, this method converts the latitude to radians.

**Parameters**

<i>latitude</i>	The latitude value in decimal degrees.
-----------------	--

**9.610.2.4 checkLongitude()**

```
bool Digikam::GeodeticCalculator::checkLongitude (
    double * longitude ) [protected]
```

The argument *longitude* should be greater or equal than -180 degrees and lower or equals than +180 degrees. As a convenience, this method converts the longitude to radians.

**Parameters**

<i>longitude</i>	The longitude value in decimal degrees.
------------------	---

**9.610.2.5 checkOrthodromicDistance()**

```
bool Digikam::GeodeticCalculator::checkOrthodromicDistance (
    const double distance ) [protected]
```

Arguments *orthodromicDistance* should be greater or equal than 0 and lower or equals than the maximum orthodromic distance.

**Parameters**

<i>distance</i>	The orthodromic distance value.
-----------------	---------------------------------

**9.610.2.6 computeDirection()**

```
bool Digikam::GeodeticCalculator::computeDirection ( )
```

Computes the azimuth and orthodromic distance from the startingGeographicPoint() and the destinationGeographicPoint().

**9.610.2.7 destinationGeographicPoint()**

```
bool Digikam::GeodeticCalculator::destinationGeographicPoint (
    double * longitude,
    double * latitude )
```

This method returns the point set by the last call to a `setDestinationGeographicPoint(...)` method, except if `setDirection(...)` has been invoked after. In this later case, the destination point will be computed from the starting point to the azimuth and distance specified. Coordinates positive North and East.

**Returns**

The destination point. The x and y coordinates are the longitude and latitude in decimal degrees, respectively.

**9.610.2.8 meridianArcLength()**

```
double Digikam::GeodeticCalculator::meridianArcLength (
    double latitude1,
    double latitude2 )
```

**Parameters**

<i>latitude1</i>	The latitude of the first point (in decimal degrees).
<i>latitude2</i>	The latitude of the second point (in decimal degrees).

**Returns**

Returned the meridian arc length between `latitude1` and `latitude2`

**9.610.2.9 meridianArcLengthRadians()**

```
double Digikam::GeodeticCalculator::meridianArcLengthRadians (
    double P1,
    double P2 )
```

**Parameters**

<i>P1</i>	The latitude of the first point (in radians).
<i>P2</i>	The latitude of the second point (in radians).

**Returns**

Returned the meridian arc length between `P1` and `P2`

**9.610.2.10 orthodromicDistance()**

```
double Digikam::GeodeticCalculator::orthodromicDistance ( )
```

This method returns the value set by the last call to `setDirection(double, double)` `setDirection(azimuth, distance)`, except if `setDestinationGeographicPoint(double, double)` `setDestinationGeographicPoint(...)` has been invoked after. In this later case, the distance will be computed from the startingGeographicPoint starting point to the destination point.

#### Returns

The orthodromic distance, in the same units as the `getEllipsoid` ellipsoid axis.

#### 9.610.2.11 setDestinationGeographicPoint()

```
void Digikam::GeodeticCalculator::setDestinationGeographicPoint (
    double longitude,
    double latitude )
```

The azimuth and distance values will be updated as a side effect of this call. They will be recomputed the next time `getAzimuth()` or `getOrthodromicDistance()` are invoked. Coordinates positive North and East.

#### Parameters

<i>longitude</i>	The longitude in decimal degrees between -180 and +180°
<i>latitude</i>	The latitude in decimal degrees between -90 and +90°

#### 9.610.2.12 setDirection()

```
void Digikam::GeodeticCalculator::setDirection (
    double azimuth,
    double distance )
```

The destination point will be updated as a side effect of this call. It will be recomputed the next time `destinationGeographicPoint()` is invoked. Azimuth 0° North.

#### Parameters

<i>azimuth</i>	The azimuth in decimal degrees from -180° to 180°.
<i>distance</i>	The orthodromic distance in the same units as the ellipsoid axis.

#### 9.610.2.13 setStartingGeographicPoint()

```
void Digikam::GeodeticCalculator::setStartingGeographicPoint (
    double longitude,
    double latitude )
```

The azimuth, the orthodromic distance and the destination point are discarded. They will need to be specified again. Coordinates positive North and East.

#### Parameters

<i>longitude</i>	The longitude in decimal degrees between -180 and +180°
<i>latitude</i>	The latitude in decimal degrees between -90 and +90°

### 9.610.3 Member Data Documentation

#### 9.610.3.1 fo

```
double Digikam::GeodeticCalculator::fo = 0.0 [protected]
```

f if the flattening of the referenced ellipsoid. f2, f3 and f4 are  $f^2$ ,  $f^3$  and  $f^4$  respectively.

#### 9.610.3.2 m\_destinationValid

```
bool Digikam::GeodeticCalculator::m_destinationValid = false [protected]
```

false if long2 and lat2 need to be computed.

#### 9.610.3.3 m\_directionValid

```
bool Digikam::GeodeticCalculator::m_directionValid = false [protected]
```

false if distance and azimuth need to be computed.

#### 9.610.3.4 m\_lat1

```
double Digikam::GeodeticCalculator::m_lat1 = 0.0 [protected]
```

This point is set by setStartingGeographicPoint.

#### 9.610.3.5 m\_lat2

```
double Digikam::GeodeticCalculator::m_lat2 = 0.0 [protected]
```

This point is set by setDestinationGeographicPoint.

#### 9.610.3.6 m\_TOLERANCE\_CHECK

```
double Digikam::GeodeticCalculator::m_TOLERANCE_CHECK = 1E-8 [protected]
```

It has no impact on computed values.

## 9.611 Digikam::GeoDragDropHandler Class Reference

Inheritance diagram for Digikam::GeoDragDropHandler:

### Public Member Functions

- **GeoDragDropHandler** (`QObject *const parent=nullptr`)
- virtual `Qt::DropAction` **accepts** (`const QDropEvent *e`)=0

- void [snapItemsTo](#) (const QModelIndex &targetIndex, const QList< QPersistentModelIndex > &snappedIndices)

### 9.619.1 Detailed Description

[GeoModelHelper](#) is used to access data held in models, which is not suitable for transfer using the the Qt-style API, like coordinates or custom sized thumbnails.

The basic functions which have to be implemented are:

- [model\(\)](#): Returns a pointer to the model
- [selectionModel\(\)](#): Returns a pointer to the selection model. It may return a null-pointer if no selection model is used.
- [itemCoordinates\(\)](#): Returns the coordinates for a given item index, if it has any.
- [modelFlags\(\)](#): Returns flags for the model.

For ungrouped models, the following functions should also be implemented:

- [itemIcon\(\)](#): Returns an icon for an index, and an offset to the 'center' of the item.
- [itemFlags\(\)](#): Returns flags for individual items.
- [snapItemsTo\(\)](#): Grouped items have been moved and should snap to an index.

For grouped models which are accessed by `MarkerModel`, the following functions should be implemented:

- [bestRepresentativeIndexFromList\(\)](#): Find the item that should represent a group of items.
- [pixmapFromRepresentativeIndex\(\)](#): Find a thumbnail for an item.

### 9.619.2 Member Function Documentation

#### 9.619.2.1 [bestRepresentativeIndexFromList\(\)](#)

```
QPersistentModelIndex Digikam::GeoModelHelper::bestRepresentativeIndexFromList (
    const QList< QPersistentModelIndex > & list,
    const int sortKey ) [virtual]
```

Reimplemented in [Digikam::MapViewModelHelper](#).

### 9.619.2.2 itemCoordinates()

```
virtual bool Digikam::GeoModelHelper::itemCoordinates (
    const QModelIndex & index,
    GeoCoordinates *const coordinates ) const [pure virtual]
```

Implemented in [Digikam::MapViewModelHelper](#).

### 9.619.2.3 itemIcon()

```
bool Digikam::GeoModelHelper::itemIcon (
    const QModelIndex & index,
    QPoint *const offset,
    QSize *const size,
    QPixmap *const pixmap,
    QUrl *const url ) const [virtual]
```

Returns the icon for an ungrouped marker.

The icon can either be returned as a URL to an image, or as a QPixmap. If the caller can handle URLs (for example, to display them in HTML), he can provide the URL parameter. However, the [GeoModelHelper](#) may still choose to return a QPixmap instead, if no URL is available.

#### Parameters

<i>index</i>	Modelindex of the marker.
<i>offset</i>	Offset of the zero point in the icon, given from the top-left.
<i>size</i>	the size of the icon, only populated if a URL is returned.
<i>pixmap</i>	Holder for the pixmap of the icon.
<i>url</i>	URL of the icon if available.

Reimplemented in [Digikam::GPSBookmarkModelHelper](#).

### 9.619.2.4 model()

```
virtual QAbstractItemModel * Digikam::GeoModelHelper::model ( ) const [pure virtual]
```

Implemented in [Digikam::MapViewModelHelper](#), [Digikam::ItemGPSModelHelper](#), [Digikam::GPSBookmarkModelHelper](#), and [Digikam::GPSGeofaceModelHelper](#).

### 9.619.2.5 onIndicesClicked()

```
void Digikam::GeoModelHelper::onIndicesClicked (
    const QList< QPersistentModelIndex > & clickedIndices ) [virtual]
```

Reimplemented in [Digikam::MapViewModelHelper](#).

### 9.619.2.6 pixmapFromRepresentativeIndex()

```
QPixmap Digikam::GeoModelHelper::pixmapFromRepresentativeIndex (
    const QPersistentModelIndex & index,
    const QSize & size ) [virtual]
```

Reimplemented in [Digikam::MapViewModelHelper](#), [Digikam::ItemGPSModelHelper](#), and [Digikam::GPSGeofaceModelHelper](#).

### 9.619.2.7 selectionModel()

```
virtual QItemSelectionModel * Digikam::GeoModelHelper::selectionModel ( ) const [pure virtual]
```

Implemented in [Digikam::MapViewModelHelper](#).

## 9.621.1 Member Function Documentation

### 9.621.1.1 cameraAbout()

```
bool Digikam::GPCamera::cameraAbout (
    QString & about ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 9.621.1.2 cameraDriverType()

```
DKCamera::CameraDriverType Digikam::GPCamera::cameraDriverType ( ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 9.621.1.3 cameraManual()

```
bool Digikam::GPCamera::cameraManual (
    QString & manual ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 9.621.1.4 cameraMD5ID()

```
QByteArray Digikam::GPCamera::cameraMD5ID ( ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 9.621.1.5 cameraSummary()

```
bool Digikam::GPCamera::cameraSummary (
    QString & summary ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 9.621.1.6 cancel()

```
void Digikam::GPCamera::cancel ( ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 9.621.1.7 capture()

```
bool Digikam::GPCamera::capture (
    CamItemInfo & itemInfo ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 9.621.1.8 deleteItem()

```
bool Digikam::GPCamera::deleteItem (
    const QString & folder,
    const QString & itemName ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 9.621.1.9 doConnect()

```
bool Digikam::GPCamera::doConnect ( ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

#### 9.621.1.10 downloadItem()

```
bool Digikam::GPCamera::downloadItem (
    const QString & folder,
    const QString & itemName,
    const QString & saveFile ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

#### 9.621.1.11 getFolders()

```
bool Digikam::GPCamera::getFolders (
    const QString & folder ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

#### 9.621.1.12 getFreeSpace()

```
bool Digikam::GPCamera::getFreeSpace (
    quint64 & bytesSize,
    quint64 & bytesAvail ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

#### 9.621.1.13 getItemInfo()

```
void Digikam::GPCamera::getItemInfo (
    const QString & folder,
    const QString & itemName,
    CamItemInfo & info,
    bool useMetadata ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

#### 9.621.1.14 getItemsInfoList()

```
bool Digikam::GPCamera::getItemsInfoList (
    const QString & folder,
    bool useMetadata,
    CamItemInfoList & infoList ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

#### 9.621.1.15 getMetadata()

```
bool Digikam::GPCamera::getMetadata (
    const QString & folder,
    const QString & itemName,
    DMetadata & meta ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

**9.621.1.16 getPreview()**

```
bool Digikam::GPCamera::getPreview (
    QImage & preview ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

**9.621.1.17 getThumbnail()**

```
bool Digikam::GPCamera::getThumbnail (
    const QString & folder,
    const QString & itemName,
    QImage & thumbnail ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

**9.621.1.18 setLockItem()**

```
bool Digikam::GPCamera::setLockItem (
    const QString & folder,
    const QString & itemName,
    bool lock ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

**9.621.1.19 uploadItem()**

```
bool Digikam::GPCamera::uploadItem (
    const QString & folder,
    const QString & itemName,
    const QString & localFile,
    CamItemInfo & itemInfo ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

- void **snapItemsTo** (const QModelIndex &targetIndex, const QList< QModelIndex > &snappedIndices) override

## Public Member Functions inherited from [Digikam::GeoModelHelper](#)

- **GeoModelHelper** (QObject \*const parent=nullptr)
- virtual QPersistentModelIndex **bestRepresentativeIndexFromList** (const QList< QPersistentModelIndex > &list, const int sortKey)
- virtual void **onIndicesClicked** (const QList< QPersistentModelIndex > &clickedIndices)
- virtual void **onIndicesMoved** (const QList< QPersistentModelIndex > &movedIndices, const [GeoCoordinates](#) &targetCoordinates, const QPersistentModelIndex &targetSnapIndex)
- virtual QPixmap **pixmapFromRepresentativeIndex** (const QPersistentModelIndex &index, const QSize &size)  
*these are used by MarkerModel for grouped models*
- void **snapItemsTo** (const QModelIndex &targetIndex, const QList< QPersistentModelIndex > &snappedIndices)

## 9.622.1 Member Function Documentation

### 9.622.1.1 itemCoordinates()

```
bool Digikam::GPSBookmarkModelHelper::itemCoordinates (
    const QModelIndex & index,
    GeoCoordinates *const coordinates ) const [override], [virtual]
```

Implements [Digikam::GeoModelHelper](#).

### 9.622.1.2 itemFlags()

```
GeoModelHelper::PropertyFlags Digikam::GPSBookmarkModelHelper::itemFlags (
    const QModelIndex & index ) const [override], [virtual]
```

Reimplemented from [Digikam::GeoModelHelper](#).

### 9.622.1.3 itemIcon()

```
bool Digikam::GPSBookmarkModelHelper::itemIcon (
    const QModelIndex & index,
    QPoint *const offset,
    QSize *const size,
    QPixmap *const pixmap,
    QUrl *const url ) const [override], [virtual]
```

Returns the icon for an ungrouped marker.

The icon can either be returned as a URL to an image, or as a QPixmap. If the caller can handle URLs (for example, to display them in HTML), he can provide the URL parameter. However, the [GeoModelHelper](#) may still choose to return a QPixmap instead, if no URL is available.

#### Parameters

<i>index</i>	Modelindex of the marker.
<i>offset</i>	Offset of the zero point in the icon, given from the top-left.
<i>size</i>	the size of the icon, only populated if a URL is returned.
<i>pixmap</i>	Holder for the pixmap of the icon.
<i>url</i>	URL of the icon if available.

Reimplemented from [Digikam::GeoModelHelper](#).

### 9.622.1.4 model()

```
QAbstractItemModel * Digikam::GPSBookmarkModelHelper::model ( ) const [override], [virtual]
```

Implements [Digikam::GeoModelHelper](#).

### 9.622.1.5 modelFlags()

```
GeoModelHelper::PropertyFlags Digikam::GPSBookmarkModelHelper::modelFlags ( ) const [override],
[virtual]
```

Reimplemented from [Digikam::GeoModelHelper](#).

### 9.622.1.6 selectionModel()

```
QItemSelectionModel * Digikam::GPSBookmarkModelHelper::selectionModel ( ) const [override],
[virtual]
```

Implements [Digikam::GeoModelHelper](#).

### 9.622.1.7 snapItemsTo()

```
void Digikam::GPSBookmarkModelHelper::snapItemsTo (
    const QModelIndex & targetIndex,
    const QList< QModelIndex > & snappedIndices ) [override], [virtual]
```

Reimplemented from [Digikam::GeoModelHelper](#).

## 9.629.1 Member Function Documentation

### 9.629.1.1 isTagListDirty()

```
bool Digikam::GPSItemContainer::isTagListDirty ( ) const
```

#### Returns

Returns true is the current image has been modified and not saved.

### 9.629.1.2 loadImageData()

```
bool Digikam::GPSItemContainer::loadImageData ( ) [virtual]
```

### 9.629.1.3 restoreGPSData()

```
void Digikam::GPSItemContainer::restoreGPSData (
    const GPSDataContainer & container )
```

Sets m\_dirty to false if container equals savedState.

### 9.629.1.4 saveChanges()

```
QString Digikam::GPSItemContainer::saveChanges ( ) [virtual]
```

### 9.629.1.5 setTagList()

```
void Digikam::GPSItemContainer::setTagList (
    const QList< QList< TagData > > & externalTagList )
```

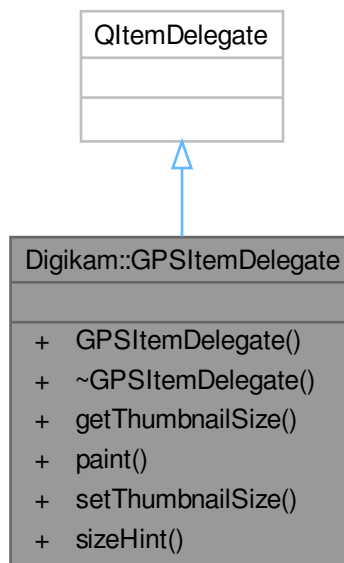

This function adds them.

## Parameters

<i>externalTagList</i>	A list containing tags.
------------------------	-------------------------

## 9.630 Digikam::GPSItemDelegate Class Reference

Inheritance diagram for Digikam::GPSItemDelegate:

### Public Member Functions

## 9.639 Digikam::GPSLinkItemSelectionModel Class Reference

Makes it possible to share a selection in multiple views which do not have the same source model.

Inheritance diagram for Digikam::GPSLinkItemSelectionModel:

### Signals

- void **linkedItemSelectionModelChanged** ()

### Public Member Functions

- **GPSLinkItemSelectionModel** (QAbstractItemModel \*const targetModel, QItemSelectionModel \*const linkedItemSelectionModel, QObject \*const parent=nullptr)
- **GPSLinkItemSelectionModel** (QObject \*const parent=nullptr)
- QItemSelectionModel \* **linkedItemSelectionModel** () const
- void **select** (const QItemSelection &selection, QItemSelectionModel::SelectionFlags command) override
- void **select** (const QModelIndex &index, QItemSelectionModel::SelectionFlags command) override
- void **setLinkedItemSelectionModel** (QItemSelectionModel \*const selectionModel)

### Protected Attributes

- GPSLinkItemSelectionModelPrivate \*const **d\_ptr**

## Properties

- QItemSelectionModel \* **linkedItemSelectionModel**

### 9.639.1 Detailed Description

Although Qt documentation, multiple views can share the same QItemSelectionModel, the views then need to have the same source model.

If there is a proxy model between the model and one of the views, or different proxy models in each, this class makes it possible to share the selection between the views.

## 9.640 Digikam::GPSTiler Class Reference

Marker model for storing data needed to display markers on the map.

Inheritance diagram for Digikam::GPSMarkerTiler:

### Public Slots

- void `slotNewModelData` (const `QList< ItemInfo >` &infoList)  
*Receives notifications from the album model about new items.*

- typedef QFlags< TilerFlag > **TilerFlags**

### 9.640.1 Detailed Description

The data is retrieved from [Digikam's](#) database.

### 9.640.2 Constructor & Destructor Documentation

#### 9.640.2.1 GPSTiler()

```
Digikam::GPSTiler::GPSTiler (
    QObject *const parent,
    ItemFilterModel *const imageFilterModel,
    QItemSelectionModel *const selectionModel ) [explicit]
```

#### Parameters

<i>parent</i>	The parent object
<i>imageFilterModel</i>	The image filter instance
<i>selectionModel</i>	The selection model instance

### 9.640.3 Member Function Documentation

#### 9.640.3.1 bestRepresentativeIndexFromList()

```
QVariant Digikam::GPSTiler::bestRepresentativeIndexFromList (
    const QList< QVariant > & indices,
    const int sortKey ) [override], [virtual]
```

This is needed to display a thumbnail for a marker group.

#### Parameters

<i>indices</i>	A list containing markers, obtained by <code>getTileRepresentativeMarker</code> .
<i>sortKey</i>	Sets the criteria for selecting the representative thumbnail, a combination of the <code>SortOptions</code> bits.

#### Returns

Returns the internally used index of the marker.

Implements [Digikam::AbstractMarkerTiler](#).

**9.640.3.2 getGlobalGroupState()**

```
GeoGroupState Digikam::GPSMarkerTiler::getGlobalGroupState ( ) [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

**9.640.3.3 getTile()**

```
AbstractMarkerTiler::Tile * Digikam::GPSMarkerTiler::getTile (
    const TileIndex & tileIndex,
    const bool stopIfEmpty ) [override], [virtual]
```

**Parameters**

<i>tileIndex</i>	The index of a tile.
<i>stopIfEmpty</i>	Determines whether child tiles are also created for empty tiles.

Implements [Digikam::AbstractMarkerTiler](#).

**9.640.3.4 getTileGroupState()**

```
GeoGroupState Digikam::GPSMarkerTiler::getTileGroupState (
    const TileIndex & tileIndex ) [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

**9.640.3.5 getTileMarkerCount()**

```
int Digikam::GPSMarkerTiler::getTileMarkerCount (
    const TileIndex & tileIndex ) [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

**9.640.3.6 getTileRepresentativeMarker()**

```
QVariant Digikam::GPSMarkerTiler::getTileRepresentativeMarker (
    const TileIndex & tileIndex,
    const int sortKey ) [override], [virtual]
```

**Parameters**

<i>tileIndex</i>	Index of the tile from which the best marker should be found.
<i>sortKey</i>	Sets the criteria for selecting the representative thumbnail, a combination of the SortOptions bits.

**Returns**

Returns the internally used index of the marker.

Implements [Digikam::AbstractMarkerTiler](#).

### 9.640.3.7 getTileSelectedCount()

```
int Digikam::GPSTiler::getTileSelectedCount (
    const TileIndex & tileIndex ) [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

### 9.640.3.8 indicesEqual()

```
bool Digikam::GPSTiler::indicesEqual (
    const QVariant & a,
    const QVariant & b ) const [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

### 9.640.3.9 onIndicesClicked()

```
void Digikam::GPSTiler::onIndicesClicked (
    const ClickInfo & clickInfo ) [override], [virtual]
```

Reimplemented from [Digikam::AbstractMarkerTiler](#).

### 9.640.3.10 pixmapFromRepresentativeIndex()

```
QPixmap Digikam::GPSTiler::pixmapFromRepresentativeIndex (
    const QVariant & index,
    const QSize & size ) [override], [virtual]
```

#### Parameters

<i>index</i>	The marker's index.
<i>size</i>	The size of the thumbnail.

#### Returns

If the thumbnail has been loaded in the [ThumbnailLoadThread](#) instance, it is returned. If not, a [QPixmap](#) is returned and [ThumbnailLoadThread](#)'s signal named `signalThumbnailLoaded` is emitted when the thumbnail becomes available.

Implements [Digikam::AbstractMarkerTiler](#).

### 9.640.3.11 prepareTiles()

```
void Digikam::GPSTiler::prepareTiles (
    const GeoCoordinates & upperLeft,
```

```
const GeoCoordinates & lowerRight,
int level ) [override], [virtual]
```

This function calls the database for the images found inside a rectangle defined by upperLeft and lowerRight points. The images are returned from the database in batches.

#### Parameters

<i>upperLeft</i>	The North-West point.
<i>lowerRight</i>	The South-East point.
<i>level</i>	The requested tiling level.

Implements [Digikam::AbstractMarkerTiler](#).

#### 9.640.3.12 regenerateTiles()

```
void Digikam::GPSTiler::regenerateTiles ( ) [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

#### 9.640.3.13 setActive()

```
void Digikam::GPSTiler::setActive (
const bool state ) [override], [virtual]
```

#### Parameters

<i>state</i>	New state of the map, true means active.
--------------	--

Implements [Digikam::AbstractMarkerTiler](#).

#### 9.640.3.14 setPositiveFilterIsActive()

```
void Digikam::GPSTiler::setPositiveFilterIsActive (
const bool state )
```

#### 9.640.3.15 slotNewModelData

```
void Digikam::GPSTiler::slotNewModelData (
const QList< ItemInfo > & infoList ) [slot]
```

#### 9.640.3.16 tileNew()

```
AbstractMarkerTiler::Tile * Digikam::GPSTiler::tileNew ( ) [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

## 9.641 Digikam::GPSModelIndexProxyMapper Class Reference

This class facilitates easy mapping of indexes and selections through proxy models.

Inheritance diagram for Digikam::GPSModelIndexProxyMapper:

### Signals

- void **isConnectedChanged** ()

### Public Member Functions

- **GPSModelIndexProxyMapper** (const QAbstractItemModel \*const leftModel, const QAbstractItemModel \*const rightModel, QObject \*const parent=nullptr)
- bool **isConnected** () const
- QModelIndex **mapLeftToRight** (const QModelIndex &index) const  
*Maps the `index` from the left model to the right model.*
- QModelIndex **mapRightToLeft** (const QModelIndex &index) const  
*Maps the `index` from the right model to the left model.*
- QItemSelection **mapSelectionLeftToRight** (const QItemSelection &selection) const  
*Maps the `selection` from the left model to the right model.*
- QItemSelection **mapSelectionRightToLeft** (const QItemSelection &selection) const  
*Maps the `selection` from the right model to the left model.*

## Properties

- bool [isConnected](#)

*Indicates whether there is a chain that can be followed from leftModel to rightModel.*

### 9.641.1 Detailed Description

In a complex system of proxy models there can be a need to map indexes and selections between them, and sometimes to do so without knowledge of the path from one model to another.

If there is a need to map indexes between proxy 2 and proxy 4, a [GPSModelIndexProxyMapper](#) can be created to facilitate mapping of indexes between them.

Note that the aim is to achieve black box connections so that there is no need for application code to know the structure of proxy models in the path between left and right and attempt to manually map them.

The isConnected property indicates whether there is a path from the left side to the right side.

### 9.641.2 Property Documentation

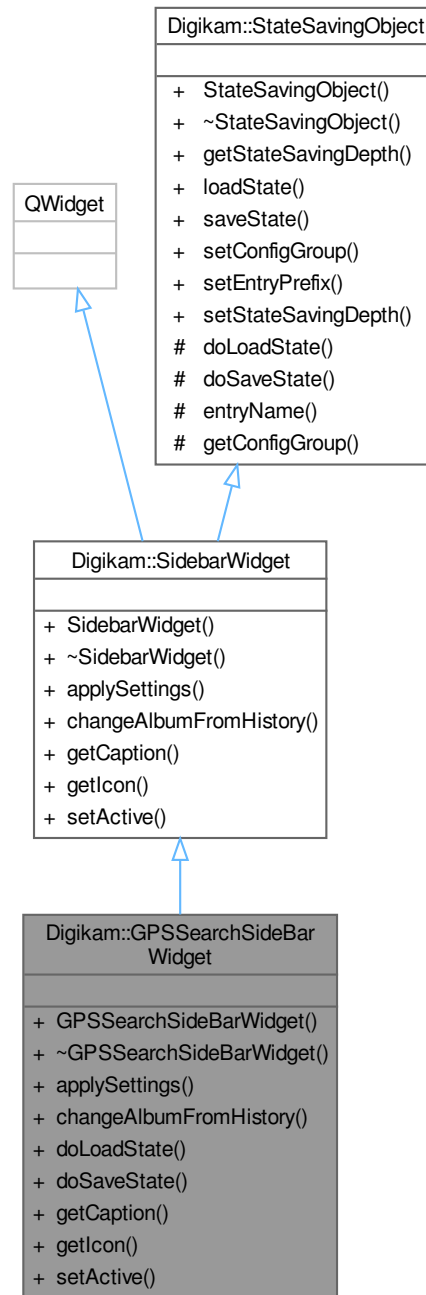

#### 9.641.2.1 isConnected

```
bool Digikam::GPSModelIndexProxyMapper::isConnected [read]
```

This value can change if the sourceModel of an intermediate proxy is changed.

## 9.642 Digikam::GPSSearchSideBarWidget Class Reference

Inheritance diagram for Digikam::GPSSearchSideBarWidget:

### Signals

- void **signalMapSololtems** (const QList< qlonglong > &, const QString &)

## Signals inherited from [Digikam::SidebarWidget](#)

- void **requestActiveTab** ([SidebarWidget](#) \*)  
*This signal can be emitted if this sidebar widget wants to be the one that is active.*
- void **signalNotificationError** (const QString &message, int type)  
*To dispatch error message to temporized pop-up notification widget hosted with icon-view.*

## Public Member Functions

- **GPSSearchSideBarWidget** (QWidget \*const parent, [SearchModel](#) \*const searchModel, [SearchModificationHelper](#) \*const searchModificationHelper, [ItemFilterModel](#) \*const imageFilterModel, [QItemSelectionModel](#) \*const itemSelectionModel)
- void **applySettings** () override  
*This method is invoked when the application settings should be (re-) applied to this widget.*
- void **changeAlbumFromHistory** (const QList< [Album](#) \* > &album) override  
*This is called on this widget when the history requires to move back to the specified album.*
- void **doLoadState** () override  
*Implement this hook method for state loading.*
- void **doSaveState** () override  
*Implement this hook method for state saving.*
- const QString **getCaption** () override  
*Must be implemented to return the title of this sidebar's tab.*
- const QIcon **getIcon** () override  
*Must be implemented and return the icon that shall be visible for this sidebar widget.*
- void **setActive** (bool active) override  
*This method is called if the visible sidebar widget is changed.*

## Public Member Functions inherited from [Digikam::SidebarWidget](#)

- [SidebarWidget](#) (QWidget \*const parent)  
*Constructor.*
- **~SidebarWidget** () override=default  
*Destructor.*

## Public Member Functions inherited from [Digikam::StateSavingObject](#)

- [StateSavingObject](#) (QObject \*const host)  
*Constructor.*
- virtual **~StateSavingObject** ()  
*Destructor.*
- [StateSavingDepth](#) **getStateSavingDepth** () const  
*Returns the depth used for state saving or loading.*
- void **loadState** ()  
*Invokes loading the class' state.*
- void **saveState** ()  
*Invokes saving the class' state.*
- virtual void **setConfigGroup** (const KConfigGroup &group)  
*Sets a dedicated config group that will be used to store and reload the state from.*
- virtual void **setEntryPrefix** (const QString &prefix)  
*Define a prefix that will be used for every entry in the config group.*
- void **setStateSavingDepth** (const [StateSavingDepth](#) depth)  
*Sets the depth used for state saving or loading.*

## Additional Inherited Members

## Public Types inherited from [Digikam::StateSavingObject](#)

- enum [StateSavingDepth](#) { [INSTANCE](#) , [DIRECT\\_CHILDREN](#) , [RECURSIVE](#) }

*This enum defines the "depth" of the [StateSavingObject::loadState\(\)](#) and [StateSavingObject::saveState\(\)](#) methods.*

## Protected Member Functions inherited from [Digikam::StateSavingObject](#)

- [QString](#) [entryName](#) (const [QString](#) &base) const  
*Always use this method to create config group entry names.*
- [KConfigGroup](#) [getConfigGroup](#) () const  
*Returns the config group that must be used for state saving and loading.*

## 9.642.1 Member Function Documentation

### 9.642.1.1 [applySettings\(\)](#)

```
void Digikam::GPSSearchSideBarWidget::applySettings ( ) [override], [virtual]
```

Implements [Digikam::SidebarWidget](#).

### 9.642.1.2 [changeAlbumFromHistory\(\)](#)

```
void Digikam::GPSSearchSideBarWidget::changeAlbumFromHistory (
    const QList< Album * > & album ) [override], [virtual]
```

Implements [Digikam::SidebarWidget](#).

### 9.642.1.3 [doLoadState\(\)](#)

```
void Digikam::GPSSearchSideBarWidget::doLoadState ( ) [override], [virtual]
```

Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 9.642.1.4 [doSaveState\(\)](#)

```
void Digikam::GPSSearchSideBarWidget::doSaveState ( ) [override], [virtual]
```

Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 9.642.1.5 getCaption()

```
const QString Digikam::GPSSearchSideBarWidget::getCaption ( ) [override], [virtual]
```

#### Returns

localized title string

Implements [Digikam::SidebarWidget](#).

### 9.642.1.6 getIcon()

```
const QIcon Digikam::GPSSearchSideBarWidget::getIcon ( ) [override], [virtual]
```

#### Returns

pixmap icon

Implements [Digikam::SidebarWidget](#).

### 9.642.1.7 setActive()

```
void Digikam::GPSSearchSideBarWidget::setActive (
    bool active ) [override], [virtual]
```

#### Parameters

<i>active</i>	if true, this widget is the new active widget, if false another widget is active
---------------	--

Implements [Digikam::SidebarWidget](#).

## 9.643 Digikam::GPSSearchView Class Reference

Inheritance diagram for Digikam::GPSSearchView:

## Additional Inherited Members

## Public Types inherited from [Digikam::StateSavingObject](#)

- enum [StateSavingDepth](#) { [INSTANCE](#) , [DIRECT\\_CHILDREN](#) , [RECURSIVE](#) }

*This enum defines the "depth" of the [StateSavingObject::loadState\(\)](#) and [StateSavingObject::saveState\(\)](#) methods.*

## Protected Member Functions inherited from [Digikam::StateSavingObject](#)

- [QString](#) **entryName** (const [QString](#) &base) const

*Always use this method to create config group entry names.*

- [KConfigGroup](#) **getConfigGroup** () const

*Returns the config group that must be used for state saving and loading.*

## 9.643.1 Constructor & Destructor Documentation

### 9.643.1.1 GPSSearchView()

```
Digikam::GPSSearchView::GPSSearchView (
    QWidget *const parent,
    SearchModel *const searchModel,
    SearchModificationHelper *const searchModificationHelper,
    ItemFilterModel *const imageFilterModel,
    QItemSelectionModel *const itemSelectionModel ) [explicit]
```

#### Parameters

<i>parent</i>	The parent object.
<i>searchModel</i>	The model that stores the searches.
<i>searchModificationHelper</i>	The helper instance to perform the searches.
<i>imageFilterModel</i>	The image model used by displaying the selected images on map.
<i>itemSelectionModel</i>	The selection model corresponding to the imageFilterModel.

## 9.643.2 Member Function Documentation

### 9.643.2.1 doLoadState()

```
void Digikam::GPSSearchView::doLoadState ( ) [override], [virtual]
```

Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 9.643.2.2 doSaveState()

```
void Digikam::GPSSearchView::doSaveState ( ) [override], [virtual]
```

Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 9.643.2.3 setActive()

```
void Digikam::GPSSearchView::setActive (
    bool state )
```

Called when the GPSSearch tab becomes the current/not current tab.

#### Parameters

<i>state</i>	When true, the widget is enabled.
--------------	-----------------------------------

### 9.643.2.4 setConfigGroup()

```
void Digikam::GPSSearchView::setConfigGroup (
    const KConfigGroup & group ) [override], [virtual]
```

If this method is not called, a group based on the object name is used.

You can re-implement this method to pass the group set here to child objects. Don't forget to call this method in your implementation.

#### Parameters

<i>group</i>	config group to use for state saving and restoring
--------------	--

Reimplemented from [Digikam::StateSavingObject](#).

## 9.644 Digikam::GPSUndoCommand Class Reference

Inheritance diagram for Digikam::GPSUndoCommand:

#### Classes

- class [UndoInfo](#)

### Public Member Functions

- **GPSUndoCommand** (QUndoCommand \*const parent=nullptr)

## 9.646.1 Member Enumeration Documentation

### 9.646.1.1 AdjacencyFlags

```
template<class VertexProperties , class EdgeProperties >
enum Digikam::Graph::AdjacencyFlags
```

#### Enumerator

EdgesToLeaf	These resolve to one of the flags above, depending on MeaningOfDirection.
-------------	---

## 9.646.2 Member Function Documentation

### 9.646.2.1 edgeDifference()

```
template<class VertexProperties , class EdgeProperties >
QList< Edge > Digikam::Graph< VertexProperties, EdgeProperties >::edgeDifference (
    const Graph< VertexProperties, EdgeProperties > & other,
    const std::vector< vertex_t > & copiedVertices ) const [inline], [protected]
```

copiedVertices maps the vertices of this graph to other.

### 9.646.2.2 leaves()

```
template<class VertexProperties , class EdgeProperties >
QList< Vertex > Digikam::Graph< VertexProperties, EdgeProperties >::leaves ( ) const [inline]
```

vertices with no children Takes the graph direction into account.

### 9.646.2.3 listPath()

```
template<class VertexProperties , class EdgeProperties >
QList< Vertex > Digikam::Graph< VertexProperties, EdgeProperties >::listPath (
    const Vertex & root,
    const Vertex & target,
    const VertexVertexMap & predecessors,
    MeaningOfDirection dir = ParentToChild ) const [inline], [protected]
```

Depending on MeaningOfDirection, the ids are listed inverted, from target to root.

### 9.646.2.4 longestPathTouching()

```
template<class VertexProperties , class EdgeProperties >
QList< Vertex > Digikam::Graph< VertexProperties, EdgeProperties >::longestPathTouching (
    const Vertex & v ) const [inline]
```

The returned list is given in that order, root - v - leave. If there is more than one candidate for root or leave, lessThan is used to determine the first candidate.

### 9.646.2.5 roots()

```
template<class VertexProperties , class EdgeProperties >
QList< Vertex > Digikam::Graph< VertexProperties, EdgeProperties >::roots ( ) const [inline]
```

vertices with no parents. Takes the graph direction into account.

### 9.646.2.6 rootsOf()

```
template<class VertexProperties , class EdgeProperties >
QList< Vertex > Digikam::Graph< VertexProperties, EdgeProperties >::rootsOf (
    const Vertex & v ) const [inline]
```

Subset of [roots\(\)](#). I case any leaves have roots that are not roots of v, they will not be contained in this list.

### 9.646.2.7 shortestDistancesFrom()

```
template<class VertexProperties , class EdgeProperties >
QMap< Vertex, int > Digikam::Graph< VertexProperties, EdgeProperties >::shortestDistancesFrom (
    const Vertex & v ) const [inline]
```

If the value is -1, a vertex is not reachable from v.

### 9.646.2.8 shortestPath()

```
template<class VertexProperties , class EdgeProperties >
QList< Vertex > Digikam::Graph< VertexProperties, EdgeProperties >::shortestPath (
    const Vertex & v1,
    const Vertex & v2 ) const [inline]
```

If s2 is not reachable from s1, the path is searched from s2 to s1. The returned list always starts with s1, contains the intermediate vertices, and ends with s2. If no path is available, an empty list is returned.

**9.646.2.9 transitiveReduction()**

```
template<class VertexProperties , class EdgeProperties >
Graph Digikam::Graph< VertexProperties, EdgeProperties >::transitiveReduction (
    QList< Edge > * removedEdges = 0,
    GraphCopyFlags flags = CopyAllProperties ) const [inline]
```

Optionally, a list of edges of this graph that have been removed in the returned graph is given.

**9.646.2.10 vertexCount()**

```
template<class VertexProperties , class EdgeProperties >
int Digikam::Graph< VertexProperties, EdgeProperties >::vertexCount ( ) const [inline]
```

**Note**

for "hasAdjacentVertices", simply use hasEdges(v, flags).

**9.646.2.11 verticesBreadthFirst()**

```
template<class VertexProperties , class EdgeProperties >
QList< Vertex > Digikam::Graph< VertexProperties, EdgeProperties >::verticesBreadthFirst (
    const Vertex & givenRef = Vertex() ) const [inline]
```

A single vertex is taken as reference to distinguish main root and side paths. Otherwise the first root is taken as reference.

**9.646.2.12 verticesDepthFirstSorted()**

```
template<class VertexProperties , class EdgeProperties >
template<typename LessThan >
QList< Vertex > Digikam::Graph< VertexProperties, EdgeProperties >::verticesDepthFirstSorted
(
    const Vertex & givenRef,
    LessThan lessThan ) const [inline]
```

When discovering a vertex, the adjacent vertices are sorted with the given lessThan. A single vertex is taken as starting point. If null, the first root is taken as reference.

**9.646.2.13 verticesDominatedBy()**

```
template<class VertexProperties , class EdgeProperties >
QList< Vertex > Digikam::Graph< VertexProperties, EdgeProperties >::verticesDominatedBy (
    const Vertex & v,
    const Vertex & root,
    const QList< Vertex > & presortedVertices ) const [inline]
```

The order is the same as in the given, sorted list of all vertices in this graph (or all vertices expected to be returned). The returned list is the intersection of the dominated vertices and presortedVertices, in order of presortedVertices). Remove all vertices from the DFS of v that are not in the dominated tree.

### 9.646.2.14 verticesDominatedByDepthFirstSorted()

```
template<class VertexProperties , class EdgeProperties >
template<typename LessThan >
QList< Vertex > Digikam::Graph< VertexProperties, EdgeProperties >::verticesDominatedByDepthFirstSorted (
    const Vertex & v,
    const Vertex & root,
    LessThan lessThan ) const [inline]
```

The returned list is in depth-first order, using root as starting point, and when discovering a vertex, sorting the adjacent vertices with the given lessThan.

## 9.647 Digikam::Graph< VertexProperties, EdgeProperties >::DominatorTree Class Reference

### Public Member Functions

- template<class GraphType > void **enter** (const GraphType &graph, const Vertex &v, MeaningOfDirection direction=ParentToChild)

### Public Attributes

- [VertexVertexMap](#) predecessors

## 9.648 Digikam::Graph< VertexProperties, EdgeProperties >::Edge Class Reference

### Public Member Functions

- **Edge** (const edge\_t &e)
- bool **isNull** () const
- **operator const edge\_t &** () const
- **operator edge\_t &** ()
- **Edge** & **operator=** (const edge\_t &other)
- bool **operator==** (const edge\_t &other) const
- edge\_t & **toEdge** ()
- const edge\_t & **toEdge** () const

### Protected Attributes

- edge\_t **e**
- bool **null** = true

## 9.649 Digikam::Graph< VertexProperties, EdgeProperties >::GraphSearch Class Reference

### Classes

- class [BreadthFirstSearchVisitor](#)
- class [CommonVisitor](#)
- class [DepthFirstSearchVisitor](#)
- class [lessThanMapEdgeToTarget](#)

### Public Member Functions

- template<class GraphType >  
void **breadthFirstSearch** (const GraphType &graph, const [Vertex](#) &v, bool invertGraph)
- template<class GraphType >  
void **depthFirstSearch** (const GraphType &graph, const [Vertex](#) &v, bool invertGraph)
- template<class GraphType , typename LessThan >  
void **depthFirstSearchSorted** (const GraphType &graph, const [Vertex](#) &v, bool invertGraph, LessThan lessThan)

### Public Attributes

- QList< [Vertex](#) > **vertices**

### Protected Member Functions

- template<class IncidenceGraph , class DFSVisitor , class ColorMap , typename LessThan >  
void **depth\_first\_search\_sorted** (const IncidenceGraph &g, [Vertex](#) u, DFSVisitor &vis, ColorMap color, LessThan lessThan)

*This is boost's simple, old, recursive DFS algorithm adapted with lessThan.*

## 9.649.1 Member Function Documentation

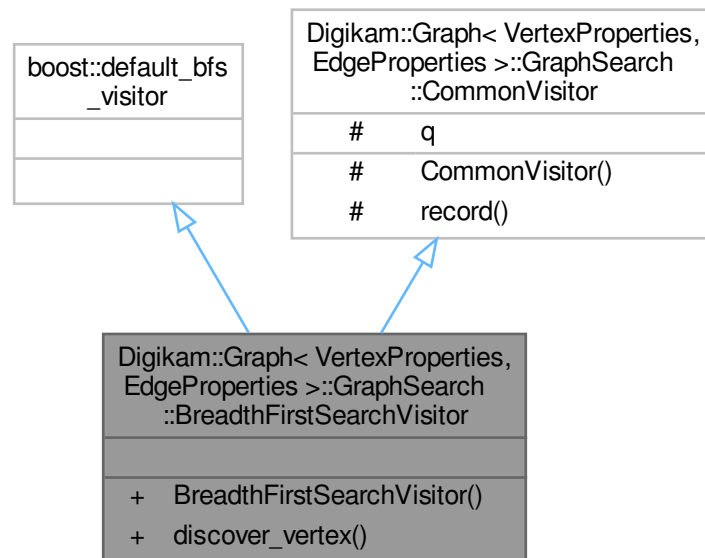

### 9.649.1.1 depth\_first\_search\_sorted()

```
template<class VertexProperties , class EdgeProperties >
template<class IncidenceGraph , class DFSVisitor , class ColorMap , typename LessThan >
void Digikam::Graph< VertexProperties, EdgeProperties >::GraphSearch::depth_first_search_↵
sorted (
    const IncidenceGraph & g,
    Vertex u,
    DFSVisitor & vis,
    ColorMap color,
    LessThan lessThan ) [inline], [protected]
```

Sort edges. The lessThan we have takes vertices, so we use a lessThan which maps the given edges to their targets, and calls our vertex lessThan.

## 9.650 Digikam::Graph< VertexProperties, EdgeProperties >::GraphSearch::BreadthFirstSearchVisitor Class Reference

- [VertexVertexMap](#) **predecessors**

### 9.654.1 Detailed Description

```
template<class VertexProperties, class EdgeProperties>
class Digikam::Graph< VertexProperties, EdgeProperties >::Path
```

Call one of the methods and then read the maps.

## 9.654.2 Member Function Documentation

### 9.654.2.1 longestPath()

```
template<class VertexProperties , class EdgeProperties >
template<class GraphType >
void Digikam::Graph< VertexProperties, EdgeProperties >::Path::longestPath (
    const GraphType & graph,
    const Vertex & v ) [inline]
```

We provide a constant weight of 1.

Invert the default compare method: With greater, we get the longest path.

Will be returned if a node is unreachable.

Store distance and predecessors in QMap, wrapped to serve as property maps.

### 9.654.2.2 shortestPath()

```
template<class VertexProperties , class EdgeProperties >
template<class GraphType >
void Digikam::Graph< VertexProperties, EdgeProperties >::Path::shortestPath (
    const GraphType & graph,
    const Vertex & v ) [inline]
```

we provide a constant weight of 1.

Store distance and predecessors in QMap, wrapped to serve as property maps.

## 9.655 Digikam::Graph< VertexProperties, EdgeProperties >::Vertex Class Reference

These two classes provide source-compatible wrappers for the vertex and edge descriptors, providing default construction to null and the isNull() method.

### Public Member Functions

## 9.656 Digikam::GraphicsDImgItem Class Reference

Inheritance diagram for Digikam::GraphicsDImgItem:

### Signals

- void **imageChanged** ()
- void **imageSizeChanged** (const QSizeF &size)
- void **showContextMenu** (QGraphicsSceneContextMenuEvent \*e)

### Public Member Functions

- **GraphicsDImgItem** (QGraphicsItem \*const parent=nullptr)

- QRectF **boundingRect** () const override
- void **clearCache** ()
- [DImg image](#) () const
- void **paint** (QPainter \*painter, const QStyleOptionGraphicsItem \*option, QWidget \*widget) override
- void **setDisplayWidget** (QWidget \*const widget)
- void **setImage** (const [DImg](#) &img)  
*Sets the [DImg](#) to be drawn by this item.*
- void **sizeHasChanged** ()
- virtual QString **userLoadingHint** () const
- [ImageZoomSettings](#) \* **zoomSettings** ()
- const [ImageZoomSettings](#) \* **zoomSettings** () const

### Protected Member Functions

- **GraphicsDImgItem** (GraphicsDImgItemPrivate &dd, QGraphicsItem \*const parent)
- void **contextMenuEvent** (QGraphicsSceneContextMenuEvent \*e) override

### Protected Attributes

- GraphicsDImgItemPrivate \*const **d\_ptr**

## 9.656.1 Member Function Documentation

### 9.656.1.1 setImage()

```
void Digikam::GraphicsDImgItem::setImage (  
    const DImg & img )
```

Note: [DImg](#) is explicitly shared, and no copy is automatically taken here.

## 9.657 Digikam::GraphicsDImgView Class Reference

Inheritance diagram for Digikam::GraphicsDImgView:

### Signals

- void **activated** ()
- void **contentsMoved** (bool panningFinished)

- void **contentsMoving** (int, int)
- void **leftButtonClicked** ()
- void **leftButtonDoubleClicked** ()
- void **resized** ()
- void **rightButtonClicked** ()
- void **toNextImage** ()
- void **toPreviousImage** ()
- void **viewportRectChanged** (const QRectF &viewportRect)

### Public Member Functions

- **GraphicsDImgView** (QWidget \*const parent=nullptr)
- int **contentsX** () const
- int **contentsY** () const
- void **drawText** (QPainter \*p, const QRectF &rect, const QString &text)
- void **fitToWindow** ()
- [GraphicsDImgItem](#) \* **item** () const  
*Return the instance of item set by [setItem\(\)](#).*
- [SinglePhotoPreviewLayout](#) \* **layout** () const
- [DImgPreviewItem](#) \* **previewItem** () const  
*Return a cast of item instance of item set by [setItem\(\)](#) as [DImgPreviewItem](#) Note: if you store a [GraphicsDImgItem](#) object using [setItem\(\)](#), this method will return 0.*
- void **scrollPointOnPoint** (const QPointF &scenePos, const QPoint &viewportPos)  
*Scrolls the view such that scenePos (in scene coordinates is displayed on the viewport at viewportPos (in viewport coordinates).*
- void **setContentPos** (int x, int y)
- void **setItem** ([GraphicsDImgItem](#) \*const item)  
*Store internal instance of item as [GraphicsDImgItem](#).*
- void **toggleFullScreen** (bool set)
- QRect **visibleArea** () const

### Protected Slots

- void **slotContentsMoved** ()
- void **slotCornerButtonPressed** ()
- void **slotPanIconHidden** ()
- virtual void **slotPanIconSelectionMoved** (const QRect &, bool)

### Protected Member Functions

- virtual bool **acceptsMouseClicked** (QMouseEvent \*e)
- void **continuePanning** (const QPoint &pos)
- void **drawForeground** (QPainter \*painter, const QRectF &rect) override
- void **finishPanning** ()
- void **installPanIcon** ()
- void **mouseDoubleClickEvent** (QMouseEvent \*) override
- void **mouseMoveEvent** (QMouseEvent \*) override
- void **mousePressEvent** (QMouseEvent \*) override
- void **mouseReleaseEvent** (QMouseEvent \*) override
- void **resizeEvent** (QResizeEvent \*) override
- void **scrollContentsBy** (int dx, int dy) override
- void **setScaleFitToWindow** (bool value)
- void **setShowText** (bool value)
- void **startPanning** (const QPoint &pos)
- void **wheelEvent** (QWheelEvent \*) override

## 9.657.1 Member Function Documentation

### 9.657.1.1 scrollPointOnPoint()

```
void Digikam::GraphicsDImageView::scrollPointOnPoint (
    const QPointF & scenePos,
    const QPoint & viewportPos )
```

E.g., calling `scrollPointOnPoint(scenePos, viewport()->rect().center())` is equivalent to calling `centerOn(scenePos)`.

### 9.657.1.2 setItem()

```
void Digikam::GraphicsDImageView::setItem (
    GraphicsDImgItem *const item )
```

You can store [DImgPreviewItem](#) object also by this method. Use `item()` or `previewItem()` to get right version. Note: if you store a [GraphicsDImgItem](#) object, `previewItem()` will return 0.

## 9.658 Digikam::GreycstorationContainer Class Reference

### Public Types

- enum **INTERPOLATION** { **NearestNeighbor** = 0 , **Linear** , **RungeKutta** }

### Public Member Functions

- void **setInpaintingDefaultSettings** ()
- void **setResizeDefaultSettings** ()
- void **setRestorationDefaultSettings** ()

### Public Attributes

- float **alpha** = 0.6F
- float **amplitude** = 60.0F
- float **anisotropy** = 0.3F
- int **btile** = 4
- float **da** = 30.0F
- float **dl** = 0.6F
- bool **fastApprox** = true
- float **gaussPrec** = 2.0F
- uint **interp** = NearestNeighbor
- uint **nbIter** = 1
- float **sharpness** = 0.7F
- float **sigma** = 1.1F
- int **tile** = 256

## 9.659 Digikam::GreycstorationFilter Class Reference

Inheritance diagram for Digikam::GreycstorationFilter:

### Public Types

- enum `MODE` { `Restore = 0`, `InPainting`, `Resize`, `SimpleResize` }

## Public Types inherited from [Digikam::DynamicThread](#)

- enum **State** { **Inactive** , **Scheduled** , **Running** , **Deactivating** }

## Public Member Functions

- [GreycstorationFilter](#) ([DImg](#) \*const orgImage, const [GreycstorationContainer](#) &settings, int mode=Restore, int newWidth=0, int newHeight=0, const [QImage](#) &inPaintingMask=[QImage](#)(), [QObject](#) \*const parent=nullptr)  
*Constructor with all arguments.*
- [GreycstorationFilter](#) ([QObject](#) \*const parent=nullptr)  
*Constructor without argument.*
- void [cancelFilter](#) () override  
*Cancel the threaded computation.*
- [FilterAction](#) [filterAction](#) () override  
*Returns the action description corresponding to currently set options.*
- [QString](#) [filterIdentifier](#) () const override  
*Return the identifier for this filter in the image history.*
- void [readParameters](#) (const [FilterAction](#) &action) override
- void [setInPaintingMask](#) (const [QImage](#) &inPaintingMask)
- void [setMode](#) (int mode, int newWidth=0, int newHeight=0)

- static int [CurrentVersion](#) ()
- static QString [DisplayableName](#) ()
- static QString [FilterIdentifier](#) ()
- static QList< int > [SupportedVersions](#) ()

## Additional Inherited Members

## Public Slots inherited from Digikam::DynamicThread

- void [start](#) ()
- void [stop](#) ()  
*Stop computation, sets the running flag to false.*
- void [wait](#) ()  
*Waits until the thread finishes.*

## Signals inherited from Digikam::DImgThreadedFilter

- void [finished](#) (bool success)  
*Emitted when the computation has completed.*
- void [progress](#) (int progress)  
*Emitted when progress info from the calculation is available.*
- void [started](#) ()  
*This signal is emitted when image data is available and the computation has started.*

## Signals inherited from Digikam::DynamicThread

- void [finished](#) ()
- void [starting](#) ()  
*Emitted if emitSignals is enabled.*

## Protected Member Functions inherited from [Digikam::DImgThreadedFilter](#)

- [DImgThreadedFilter](#) ([DImgThreadedFilter](#) \*const master, const [DImg](#) &orgImage, const [DImg](#) &destImage, int progressBegin=0, int progressEnd=100, const QString &name=QString())  
*Support for chaining two filters as master and thread.*
- virtual void [cleanupFilter](#) ()  
*Clean up filter data if necessary, called by stopComputation() method.*
- void [initMaster](#) ()
- void [initSlave](#) ([DImgThreadedFilter](#) \*const master, int progressBegin=0, int progressEnd=100)  
*Initialize the filter for use as a slave - reroutes progress info to master.*
- virtual int [modulateProgress](#) (int progress)  
*This method modulates the progress value from the 0..100 span to the span of this slave.*
- void [postProgress](#) (int progress)  
*Emit progress info.*
- virtual void [prepareDestImage](#) ()
- void [run](#) () override  
*List of threaded operations by filter.*
- void [setSlave](#) ([DImgThreadedFilter](#) \*const slave)  
*Inform the master that there is currently a slave.*

## Protected Member Functions inherited from [Digikam::DynamicThread](#)

- bool [runningFlag](#) () const volatile  
*In you run() method, you shall regularly check for runningFlag() and cleanup and return if false.*
- void [shutDown](#) ()  
*If you are deleting data in your destructor which is accessed from the thread, do one of the following from your destructor to guarantee a safe shutdown: 1) Call this method 2) Call stop() and wait(), knowing that nothing will call start() anymore after this 3) Be sure the thread will never be running at destruction.*
- void [start](#) (QMutexLocker< QMutex > &locker)  
*Doing the same as start(), stop() and wait above, provide it with a locked QMutexLocker on mutex().*
- void [stop](#) (const QMutexLocker< QMutex > &locker)
- QMutex \* [threadMutex](#) () const  
*This is the non-recursive mutex used to protect state variables and waiting in this class.*
- void [wait](#) (QMutexLocker< QMutex > &locker)

## Protected Attributes inherited from [Digikam::DImgThreadedFilter](#)

- [DImg](#) [m\\_destImage](#)  
*Output image data.*
- [DImgThreadedFilter](#) \* [m\\_master](#) = nullptr  
*The master of this slave filter.*
- QString [m\\_name](#)  
*Filter name.*
- [DImg](#) [m\\_orgImage](#)  
*Copy of original Image data.*
- int [m\\_progressBegin](#) = 0  
*The progress span that a slave filter uses in the parent filter's progress.*
- int [m\\_progressCurrent](#) = 0  
*To prevent signals bombarding with progress indicator value in postProgress().*
- int [m\\_progressSpan](#) = 0
- [DImgThreadedFilter](#) \* [m\\_slave](#) = nullptr  
*The current slave.*
- int [m\\_version](#) = 1
- bool [m\\_wasCancelled](#) = false

## 9.659.1 Member Enumeration Documentation

### 9.659.1.1 MODE

```
enum Digikam::GreycstorationFilter::MODE
```

Enumerator

SimpleResize	Mode to resize image without to use Greycstoration algorithm.
--------------	---

## 9.659.2 Constructor & Destructor Documentation

### 9.659.2.1 GreycstorationFilter() [1/2]

```
Digikam::GreycstorationFilter::GreycstorationFilter (
    QObject *const parent = nullptr ) [explicit]
```

Before to use it, you need to call in order: `setSettings()`, `setMode()`, optionally `setInPaintingMask()`, `setOriginalImage()`, and necessary `setup()` at end.

### 9.659.2.2 GreycstorationFilter() [2/2]

```
Digikam::GreycstorationFilter::GreycstorationFilter (
    DImg *const orgImage,
    const GreycstorationContainer & settings,
    int mode = Restore,
    int newWidth = 0,
    int newHeight = 0,
    const QImage & inPaintingMask = QImage(),
    QObject *const parent = nullptr )
```

Ready to use.

## 9.659.3 Member Function Documentation

### 9.659.3.1 cancelFilter()

```
void Digikam::GreycstorationFilter::cancelFilter ( ) [override], [virtual]
```

Reimplemented from [Digikam::DImgThreadedFilter](#).

### 9.659.3.2 filterAction()

```
FilterAction Digikam::GreycstorationFilter::filterAction ( ) [override], [virtual]
```

Implements [Digikam::DImgThreadedFilter](#).

### 9.659.3.3 filterIdentifier()

```
QString Digikam::GreycstorationFilter::filterIdentifier ( ) const [inline], [override], [virtual]
```

Implements [Digikam::DImgThreadedFilter](#).

### 9.659.3.4 readParameters()

```
void Digikam::GreycstorationFilter::readParameters (
    const FilterAction & action ) [override], [virtual]
```

Implements [Digikam::DImgThreadedFilter](#).

## 9.660 Digikam::GreycstorationSettings Class Reference

Inheritance diagram for Digikam::GreycstorationSettings:

### Public Member Functions

- **GreycstorationSettings** (QTabWidget \*const parent)
- bool **loadSettings** (QFile &file, const QString &header)
- void **saveSettings** (QFile &file, const QString &header)
- void **setDefaultSettings** (const [GreycstorationContainer](#) &settings)
- void **setEnabled** (bool)
- void **setSettings** (const [GreycstorationContainer](#) &settings)
- [GreycstorationContainer](#) **settings** () const

## 9.661 Digikam::GroupedImagesFinder Class Reference

### Public Member Functions

- [GroupedImagesFinder](#) (const QList< [ItemInfo](#) > &source)

*TODO: Groups should not be resolved in dio, it should be handled in views.*

### Public Attributes

- QList< [ItemInfo](#) > infos

### 9.661.1 Constructor & Destructor Documentation

#### 9.661.1.1 GroupedImagesFinder()

```
Digikam::GroupedImagesFinder::GroupedImagesFinder (  
    const QList< ItemInfo > & source ) [explicit]
```

This is already done for most things except for drag&drop, which is hard :)

## 9.662 Digikam::GroupIndicatorOverlay Class Reference

Inheritance diagram for Digikam::GroupIndicatorOverlay:

### Signals

- void **showButtonContextMenu** (const QModelIndex &index, QContextMenuEvent \*event)
- void **toggleGroupOpen** (const QModelIndex &index)

## Signals inherited from [Digikam::ItemDelegateOverlay](#)

- void **hideNotification** ()
- void **requestNotification** (const QModelIndex &index, const QString &message)
- void **update** (const QModelIndex &index)

## Public Member Functions

- **GroupIndicatorOverlay** (QObject \*const parent)
- [GroupIndicatorOverlayWidget](#) \* **buttonWidget** () const

## Public Member Functions inherited from [Digikam::AbstractWidgetDelegateOverlay](#)

- [AbstractWidgetDelegateOverlay](#) (QObject \*const parent)  
*This class provides functionality for using a widget in an overlay.*

## Public Member Functions inherited from [Digikam::ItemDelegateOverlay](#)

- **ItemDelegateOverlay** (QObject \*const parent=nullptr)
- virtual bool **acceptsDelegate** (QAbstractItemDelegate \*) const
- QAbstractItemDelegate \* **delegate** () const
- virtual void **mouseMoved** (QMouseEvent \*e, const QRect &visualRect, const QModelIndex &index)  
*Only these two methods are implemented as virtual methods.*
- virtual void **paint** (QPainter \*p, const QStyleOptionViewItem &option, const QModelIndex &index)
- void **setDelegate** (QAbstractItemDelegate \*delegate)
- void **setView** (QAbstractItemView \*view)
- QAbstractItemView \* **view** () const

## Protected Slots

- void **slotButtonClicked** ()
- void **slotButtonContextMenu** (QContextMenuEvent \*event)

## Protected Slots inherited from [Digikam::AbstractWidgetDelegateOverlay](#)

- virtual void **slotLayoutChanged** ()
- virtual void **slotReset** ()  
*Default implementations of these three slots call `hide()`*
- virtual void **slotRowsRemoved** (const QModelIndex &parent, int start, int end)
- virtual void **slotViewportEntered** ()

## Protected Slots inherited from [Digikam::ItemDelegateOverlay](#)

### Protected Member Functions

- bool [checkIndex](#) (const QModelIndex &index) const override  
*Return true here if you want to show the overlay for the given index.*
- QWidget \* [createWidget](#) () override  
*Create your widget here.*
- void [setActive](#) (bool) override  
*If active is true, this will call [createWidget\(\)](#), initialize the widget for use, and setup connections for the virtual slots.*
- void [slotEntered](#) (const QModelIndex &index) override  
*Default implementation shows the widget iff the index is valid and checkIndex returns true.*
- void [updatePosition](#) ()
- void [updateRating](#) ()
- void [visualChange](#) () override  
*Called when any change from the delegate occurs - when the overlay is installed, when size hints, styles or fonts change.*

## Protected Member Functions inherited from [Digikam::AbstractWidgetDelegateOverlay](#)

- bool [checkIndexOnEnter](#) (const QModelIndex &index) const  
*Utility method called from slotEntered.*
- bool [eventFilter](#) (QObject \*obj, QEvent \*event) override
- virtual void [hide](#) ()  
*Called when the widget shall be hidden (mouse cursor left index, viewport, uninstalled etc.).*
- virtual QString [notifyMultipleMessage](#) (const QModelIndex &, int number)
- QWidget \* [parentWidget](#) () const  
*Returns the widget to be used as parent for your widget created in [createWidget\(\)](#)*
- virtual void [viewportLeaveEvent](#) (QObject \*obj, QEvent \*event)  
*Called when a QEvent::Leave of the viewport is received.*
- virtual void [widgetEnterEvent](#) ()  
*Called when a QEvent::Enter resp.*
- void [widgetEnterNotifyMultiple](#) (const QModelIndex &index)  
*A sample implementation for above methods.*
- virtual void [widgetLeaveEvent](#) ()
- void [widgetLeaveNotifyMultiple](#) ()

## Protected Member Functions inherited from [Digikam::ItemDelegateOverlay](#)

- QList< QModelIndex > [affectedIndexes](#) (const QModelIndex &index) const
- bool [affectsMultiple](#) (const QModelIndex &index) const  
*For the context that an overlay can affect multiple items: Assuming the currently overlaid index is given.*
- int [numberOfAffectedIndexes](#) (const QModelIndex &index) const
- bool [viewHasMultiSelection](#) () const  
*Utility method.*

### Protected Attributes

- QPersistentModelIndex [m\\_index](#)

## Protected Attributes inherited from [Digikam::AbstractWidgetDelegateOverlay](#)

- bool `m_mouseButtonPressedOnWidget` = false
- `QWidget * m_widget` = nullptr

## Protected Attributes inherited from [Digikam::ItemDelegateOverlay](#)

- `QAbstractItemDelegate * m_delegate` = nullptr
- `QAbstractItemView * m_view` = nullptr

## 9.662.1 Member Function Documentation

### 9.662.1.1 `checkIndex()`

```
bool Digikam::GroupIndicatorOverlay::checkIndex (
    const QModelIndex & index ) const [override], [protected], [virtual]
```

The default implementation returns true.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.662.1.2 `createWidget()`

```
QWidget * Digikam::GroupIndicatorOverlay::createWidget ( ) [override], [protected], [virtual]
```

When creating the object, pass `parentWidget()` as parent widget. Ownership of the object is passed. It will be deleted in `setActive(false)`.

Implements [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.662.1.3 `setActive()`

```
void Digikam::GroupIndicatorOverlay::setActive (
    bool active ) [override], [protected], [virtual]
```

If active is false, this will delete the widget and disconnect all signal from model and view to this object (!)

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.662.1.4 `slotEntered()`

```
void Digikam::GroupIndicatorOverlay::slotEntered (
    const QModelIndex & index ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.662.1.5 visualChange()

```
void Digikam::GroupIndicatorOverlay::visualChange ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemDelegateOverlay](#).

## 9.663 Digikam::GroupIndicatorOverlayWidget Class Reference

Inheritance diagram for Digikam::GroupIndicatorOverlayWidget:

### Signals

- void **contextMenu** (QContextMenuEvent \*event)

### Public Member Functions

- **GroupIndicatorOverlayWidget** (QWidget \*const parent=nullptr)
- void **contextMenuEvent** (QContextMenuEvent \*event) override

### Protected Member Functions

- void **paintEvent** (QPaintEvent \*) override

## 9.664 Digikam::GroupingViewImplementation Class Reference

Inheritance diagram for Digikam::GroupingViewImplementation:

### Public Member Functions

- [ItemInfoList](#) **getHiddenGroupedInfos** (const [ItemInfoList](#) &infos) const
- virtual bool **hasHiddenGroupedImages** (const [ItemInfo](#) &) const

*must be implemented by parent view*

- bool **needGroupResolving** ([OperationType](#) type, const [ItemInfoList](#) &infos) const
- [ItemInfoList](#) **resolveGrouping** (const [ItemInfoList](#) &infos) const

## 9.664.1 Member Function Documentation

### 9.664.1.1 hasHiddenGroupedImages()

```
virtual bool Digikam::GroupingViewImplementation::hasHiddenGroupedImages (
    const ItemInfo & ) const [inline], [virtual]
```

Reimplemented in [Digikam::ItemThumbnailBar](#), [Digikam::DigikamItemView](#), and [Digikam::TableViewTreeView](#).

## 9.665 Digikam::GroupItemFilterSettings Class Reference

### Public Member Functions

- bool **isAllOpen** () const
- bool **isFiltering** () const
  - Returns if images will be filtered by these criteria at all.*
- bool **isOpen** (qlonglong group) const
- bool **matches** (const [ItemInfo](#) &info) const
  - Returns true if the given [ItemInfo](#) matches the filter criteria.*
- bool **operator==** (const [GroupItemFilterSettings](#) &other) const
- void **setAllOpen** (bool open)
  - Open all groups.*
- void **setOpen** (qlonglong group, bool open)
  - Open or close a group.*
- [DatabaseFields::Set](#) **watchFlags** () const

### Protected Attributes

- bool **m\_allOpen** = false
- QSet< qlonglong > **m\_openGroups**

## 9.666 Digikam::GroupStateComputer Class Reference

### Public Member Functions

- void **addFilteredPositiveState** (const GeoGroupState state)
- void **addRegionSelectedState** (const GeoGroupState state)
- void **addSelectedState** (const GeoGroupState state)
- void **addState** (const GeoGroupState state)
- void **clear** ()
- GeoGroupState **getState** () const

## 9.667 Digikam::Haar::Calculator Class Reference

### Public Member Functions

- int `calcHaar` (`ImageData` \*const imageData, `SignatureData` \*const sigData)  
*Determines a total of NUM\_COEFS positions in the image that have the largest magnitude (absolute value) in color value.*
- void `transform` (`ImageData` \*const data)  
*Do the Haar tensorial 2d transform itself.*

### 9.667.1 Member Function Documentation

#### 9.667.1.1 calcHaar()

```
int Digikam::Haar::Calculator::calcHaar (
    ImageData *const data,
    SignatureData *const sigData )
```

Returns linearized coordinates in sig1, sig2, and sig3. avgl are the [0,0] values. The order of occurrence of the coordinates in sig doesn't matter. Complexity is  $3 \times \text{NUM\_PIXELS}^2 \times 2\log(\text{NUM\_COEFS})$ .

#### 9.667.1.2 transform()

```
void Digikam::Haar::Calculator::transform (
    ImageData *const data )
```

Here input is RGB data [0..255] in Unit arrays. Results are available in a, b, and c. Fully inplace calculation; order of result is interleaved though, but we don't care about that.

## 9.668 Digikam::Haar::ImageData Class Reference

### Public Member Functions

- void `fillImageData` (const `DImg` &image)  
*Write pixels of a DImg in three arrays (one per color channel, pixels linearly)*
- void `fillImageData` (const `QImage` &image)  
*Write pixels of a QImage in three arrays (one per color channel, pixels linearly)*

### Public Attributes

- Unit `data1` [NumberOfPixelsSquared] = { 0.0 }
- Unit `data2` [NumberOfPixelsSquared] = { 0.0 }
- Unit `data3` [NumberOfPixelsSquared] = { 0.0 }

## 9.669 Digikam::Haar::SignatureData Class Reference

### Public Attributes

- double **avg** [3] = { 0.0 }  
*YIQ for position [0,0].*
- Haar::Idx **sig** [3][Haar::NumberOfCoefficients] = { { 0 } }  
*Y/I/Q positions with largest magnitude.*

## 9.670 Digikam::Haar::SignatureMap Class Reference

This class provides very fast lookup if a certain pixel is set (positive or negative) in the loaded coefficient set.

### Public Types

- typedef bool **MapIndexType**

### Public Member Functions

- void **fill** (const Haar::Idx \*const coefs)  
*Load a set of coefficients.*
- bool **operator[]** (Haar::Idx index) const  
*Query if the given index is set. Index must be in the range -16383..16383.*

### Public Attributes

- MapIndexType \* **m\_indexList** = nullptr

## 9.671 Digikam::Haar::WeightBin Class Reference

### Public Member Functions

- **WeightBin** ()  
*Setup initial fixed Haar weights that each coefficient represents.*
- unsigned char **bin** (int index) const
- unsigned char **binAbs** (int index) const

### Public Attributes

- unsigned char **m\_bin** [16384] = { 0 }  
*Fixed weight mask for pixel positions (i,j).*

## 9.671.1 Member Data Documentation

### 9.671.1.1 m\_bin

```
unsigned char Digikam::Haar::WeightBin::m_bin[16384] = { 0 }
```

Each entry  $x = i * \text{NUM\_PIXELS} + j$ , gets value  $\max(i,j)$  saturated at 5. To be treated as a constant.

## 9.672 Digikam::Haar::Weights Class Reference

### Public Types

- enum **SketchType** { **ScannedSketch** = 0 , **PaintedSketch** = 1 }

### Public Member Functions

- **Weights** (SketchType type=ScannedSketch)
- float **weight** (int weight, int channel) const
- float **weightForAverage** (int channel) const

## 9.673 Digikam::Haarface Class Reference

### Public Types

- enum **AlbumTagRelation** {  
**NoMix** = 0 , **Union** = 1 , **Intersection** = 2 , **AlbumExclusive** = 3 ,  
**TagExclusive** = 4 }
- using **DuplicatesResultsMap** = QMap< qlonglong, QPair< double, QList< qlonglong > > >
- enum **DuplicatesSearchRestrictions** { **None** = 0 , **SameAlbum** = 1 , **DifferentAlbum** = 2 }
- enum class **RefImageSelMethod** : unsigned int {  
**OlderOrLarger** = 0 , **PreferFolder** = 1 , **ExcludeFolder** = 2 , **NewerCreationDate** = 3 ,  
**NewerModificationDate** = 4 }

*The RefImageSelMethod enum Selection method to determine which image will be the reference in the duplicate search.*

- enum **SketchType** { **ScannedSketch** = 0 , **HanddrawnSketch** = 1 }

## Public Member Functions

- **Haarface** (const QSet< qlonglong > &images2Scan)
- QPair< double, QMap< qlonglong, double > > **bestMatchesForImageWithThreshold** (const QString &imagePath, double requiredPercentage, double maximumPercentage, const QList< int > &targetAlbums, DuplicatesSearchRestrictions searchResultRestriction=DuplicatesSearchRestrictions::None, SketchType type=ScannedSketch)
 

*Searches the database for the best matches for the specified query image.*
- QPair< double, QMap< qlonglong, double > > **bestMatchesForImageWithThreshold** (qlonglong imageid, double requiredPercentage, double maximumPercentage, const QList< int > &targetAlbums, DuplicatesSearchRestrictions searchResultRestriction=DuplicatesSearchRestrictions::None, SketchType type=ScannedSketch)
 

*Searches the database for the best matches for the specified query image.*
- QMap< qlonglong, double > **bestMatchesForSignature** (const QString &signature, const QList< int > &targetAlbums, int numberOfResults=20, SketchType type=ScannedSketch)
- DuplicatesResultsMap **findDuplicates** (const QSet< qlonglong > &images2Scan, const QSet< qlonglong >::const\_iterator &rangeBegin, const QSet< qlonglong >::const\_iterator &rangeEnd, RefImageSelMethod reflImageSelectionMethod, const QSet< qlonglong > &refs, double requiredPercentage, double maximumPercentage, DuplicatesSearchRestrictions searchResultRestriction=DuplicatesSearchRestrictions::None, HaarProgressObserver \*const observer=nullptr)
 

*Fill a map of duplicates images found over a list of images to scan.*
- bool **fulfillsRestrictions** (qlonglong imageid, int albumId, qlonglong originalImageid, int originalAlbumId, const QList< int > &targetAlbums, DuplicatesSearchRestrictions searchResultRestriction)
 

*Checks whether the image with the given imageid fulfills all restrictions given in targetAlbums and in respect to searchResultRestriction.*
- void **getBestAndWorstPossibleScore** (Haar::SignatureData \*const querySig, SketchType type, double \*const lowestAndBestScore, double \*const highestAndWorstScore)
 

*For a given signature, find out the highest and lowest possible score that any other signature could reach, compared to the given signature.*
- bool **indexImage** (const QString &filename)
 

*Adds an image to the index in the database.*
- bool **indexImage** (const QString &filename, const DImg &image)
- bool **indexImage** (const QString &filename, const QImage &image)
- bool **indexImage** (qlonglong imageid, const DImg &image)
- bool **indexImage** (qlonglong imageid, const QImage &image)
- QImage **loadQImage** (const QString &filename)
 

*This method loads a QImage from the given filename.*
- bool **retrieveSignatureFromDB** (qlonglong imageid, Haar::SignatureData &sig)
 

*Retrieve the Haar signature from database using image id.*
- void **setAlbumRootsToSearch** (const QList< int > &albumRootIds)
 

*Give a list of albumRoots to which the search shall be limited.*
- void **setAlbumRootsToSearch** (const QSet< int > &albumRootIds)
- QString **signatureAsText** (const QImage &image)
 

*Calculates the Haar signature, bring it in a form as stored in the DB, and encode it to Ascii data.*

## Static Public Member Functions

- static QSet< qlonglong > **imagesFromAlbumsAndTags** (const QList< int > &albums2Scan, const QList< int > &tags2Scan, AlbumTagRelation relation)
 

*Collects all images from the given album and tag ids according to their relation.*
- static int **preferredSize** ()
- static void **rebuildDuplicatesAlbums** (const DuplicatesResultsMap &results, bool isAlbumUpdate)
 

*This method rebuilds the given SAlbums using the given results.*

## 9.673.1 Member Enumeration Documentation

### 9.673.1.1 RefImageSelMethod

```
enum class Digikam::HaarIface::RefImageSelMethod : unsigned int [strong]
```

When adding method here, update also [Haarface::findDuplicates\(\)](#)

Enumerator

OlderOrLarger	Original.
PreferFolder	Prefer select folder to be the reference.
ExcludeFolder	Prefer image not in the selected folder.
NewerCreationDate	Prefer newer creation date image.
NewerModificationDate	Prefer newer modification date image.

## 9.673.2 Member Function Documentation

### 9.673.2.1 bestMatchesForImageWithThreshold() [1/2]

```
QPair< double, QMap< qlonglong, double > > Digikam::HaarIface::bestMatchesForImageWith↵
Threshold (
    const QString & imagePath,
    double requiredPercentage,
    double maximumPercentage,
    const QList< int > & targetAlbums,
    DuplicatesSearchRestrictions searchResultRestriction = DuplicatesSearchRestrictions↵
::None,
    SketchType type = ScannedSketch )
```

All matches with a similarity in a given threshold interval are returned. The threshold is in the range required↵Percentage..maximumPercentage.

### 9.673.2.2 bestMatchesForImageWithThreshold() [2/2]

```
QPair< double, QMap< qlonglong, double > > Digikam::HaarIface::bestMatchesForImageWith↵
Threshold (
    qlonglong imageid,
    double requiredPercentage,
    double maximumPercentage,
    const QList< int > & targetAlbums,
    DuplicatesSearchRestrictions searchResultRestriction = DuplicatesSearchRestrictions↵
::None,
    SketchType type = ScannedSketch )
```

All matches with a similarity in a given threshold interval are returned. The threshold is in the range required↵Percentage..maximumPercentage.

### 9.673.2.3 findDuplicates()

```

HaarIface::DuplicatesResultsMap Digikam::HaarIface::findDuplicates (
    const QSet< qlonglong > & images2Scan,
    const QSet< qlonglong >::const_iterator & rangeBegin,
    const QSet< qlonglong >::const_iterator & rangeEnd,
    RefImageSelMethod refImageSelectionMethod,
    const QSet< qlonglong > & refs,
    double requiredPercentage,
    double maximumPercentage,
    DuplicatesSearchRestrictions searchResultRestriction = DuplicatesSearchRestrictions←
    ::None,
    HaarProgressObserver *const observer = nullptr )

```

For each map item, the result values is list of candidate images which are duplicates of the key image. All images are referenced by id from database. The threshold is in the range 0..1, with 1 meaning identical signature.

### 9.673.2.4 loadQImage()

```

QImage Digikam::HaarIface::loadQImage (
    const QString & filename )

```

#### Parameters

<i>filename</i>	the name of the file (path)
-----------------	-----------------------------

#### Returns

A QImage, non-null on success.

### 9.673.2.5 rebuildDuplicatesAlbums()

```

void Digikam::HaarIface::rebuildDuplicatesAlbums (
    const DuplicatesResultsMap & results,
    bool isAlbumUpdate ) [static]

```

#### Parameters

<i>results</i>	Map of duplicates images found over a list of images.
<i>isAlbumUpdate</i>	if true update the SAlbums in the database.

### 9.673.2.6 retrieveSignatureFromDB()

```

bool Digikam::HaarIface::retrieveSignatureFromDB (
    qlonglong imageid,
    Haar::SignatureData & sig )

```

Return true if item signature exist else false.

### 9.673.2.7 setAlbumRootsToSearch()

```
void Digikam::HaarIface::setAlbumRootsToSearch (
    const QList< int > & albumRootIds )
```

Calling with an empty list will disable filtering.

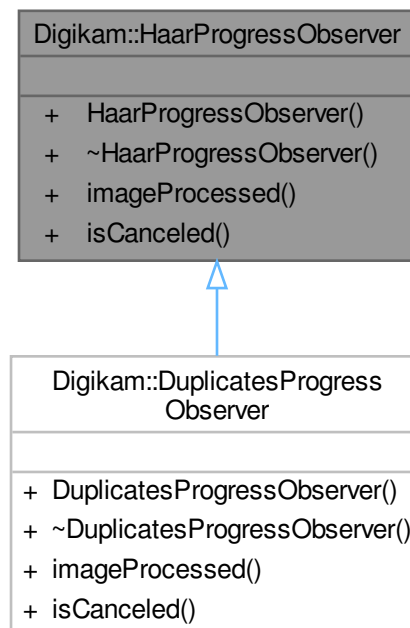

### 9.673.2.8 signatureAsText()

```
QString Digikam::HaarIface::signatureAsText (
    const QImage & image )
```

Can be used for bestMatchesForSignature.

## 9.674 Digikam::HaarProgressObserver Class Reference

Inheritance diagram for Digikam::HaarProgressObserver:

### Public Member Functions

- virtual void **imageProcessed** (const [ItemInfo](#) &, const QImage &, int)=0
- virtual bool **isCanceled** ()

## 9.675 Digikam::HidingStateChanger Class Reference

Inheritance diagram for Digikam::HidingStateChanger:

### Public Slots

- void **changeValue** (const QVariant &value)

## Public Slots inherited from [Digikam::ItemVisibilityController](#)

- void **hide** ()
- void **hideAndRemoveItem** (QObject \*item)
  - Hide the item, and then remove it.*
- void **hideItem** (QObject \*item)
- void **setDirectlyVisible** (bool visible)
- void **setItemDirectlyVisible** (QObject \*item, bool visible)
- void **setItemThatShallBeShown** (QObject \*item)
  - Sets a single item to be shown.*
- void **setItemVisible** (QObject \*item, bool visible)
- void **setShallBeShown** (bool shallBeShown)
  - Adjusts the first condition - the items are shown if shallBeShown is true and isVisible is true.*
- void **setShallBeShownDirectly** (bool shallBeShown)
- void **setVisible** (bool visible)
- void **show** ()
  - Adjusts the main condition.*
- void **showItem** (QObject \*item)
  - Shows or hides a single item.*

## Signals

- void **finished** ()
  - Emitted when the items were hidden, the target object's property changed, and the items shown again.*
- void **stateChanged** ()
  - Emitted when the items were hidden and the target object's property changed.*

## Signals inherited from [Digikam::ItemVisibilityController](#)

- void **hiddenAndRemoved** (QObject \*item)
  - Emitted when hideAndRemoveItem has finished.*
- void **propertiesAssigned** (bool visible)
  - Emitted when the (main) transition has finished.*
- void **propertiesAssigned** (QObject \*item, bool visible)
  - Emitted when a transition for a single item finished (see setItemVisible())*

## Public Member Functions

- [HidingStateChanger](#) (QObject \*const parent=nullptr)
  - This class provides a state change while fading in and out: When changeValue is called, first the items are hidden, when this is finished, the property is assigned to the object.*
- **HidingStateChanger** (QObject \*const target, const QByteArray &property, QObject \*const parent=nullptr)
  - Convenience constructor: Sets target and property name.*
- void **setPropertyName** (const QByteArray &propertyName)
- void **setTargetObject** (QObject \*const object)

## Public Member Functions inherited from [Digikam::ItemVisibilityController](#)

- **ItemVisibilityController** (QObject \*const parent=nullptr)
- void **addItem** (QObject \*const object)
  - Add and remove objects.*
- void **clear** ()
  - Remove all animations.*
- bool **hasVisibleItems** ([IncludeFadingOutMode](#) mode=[IncludeFadingOut](#)) const
  - This returns the "result" of isVisible and shallBeShown: Something is indeed visible on the scene.*
- bool **isVisible** () const
- QList< QObject \* > **items** () const
  - Returns all items under control.*
- void **removeItem** (QObject \*const object)
- void **setAnimationDuration** (int msec)
- void **setEasingCurve** (const QEasingCurve &easing)
  - Allows to change the default parameters of all animations.*
- bool **shallBeShown** () const
- [State](#) **state** () const
- QList< QObject \* > **visibleItems** ([IncludeFadingOutMode](#) mode=[IncludeFadingOut](#)) const
  - Returns all currently visible items.*

## Protected Slots

- void **slotPropertiesAssigned** (bool)

## Protected Slots inherited from [Digikam::ItemVisibilityController](#)

- void **animationFinished** ()
- void **objectDestroyed** (QObject \*)

## Protected Attributes

- QObject \* **m\_object** = nullptr
- QByteArray **m\_property**
- QVariant **m\_value**

## Additional Inherited Members

## Public Types inherited from [Digikam::ItemVisibilityController](#)

- enum [IncludeFadingOutMode](#) { [IncludeFadingOut](#) , [ExcludeFadingOut](#) }
- enum [State](#) { [Hidden](#) , [FadingIn](#) , [Visible](#) , [FadingOut](#) }

*This class handles complex visibility situations for items.*

## Protected Member Functions inherited from [Digikam::ItemVisibilityController](#)

- virtual QPropertyAnimation \* **createAnimation** (QObject \*item)
  - Creates the animation for showing and hiding the given item.*

## Properties inherited from [Digikam::ItemVisibilityController](#)

- bool **shallBeShown**
- bool **visible**

### 9.675.1 Constructor & Destructor Documentation

#### 9.675.1.1 HidingStateChanger()

```
Digikam::HidingStateChanger::HidingStateChanger (
    QObject *const parent = nullptr ) [explicit]
```

Afterwards, the items are shown again. Note that the targetObject is not necessarily a controlled item!

## 9.676 Digikam::Highlighter Class Reference

Inheritance diagram for Digikam::Highlighter:

### Public Member Functions

- **Highlighter** (`QTextDocument *const document`, `Parser *const _parser`)

### Protected Member Functions

- void **setGradientVisible** (bool visible)
- void **setHistogramMargin** (int)
- void **setHistogramType** (HistogramBoxType type)
- void **setStatisticsVisible** (bool b)

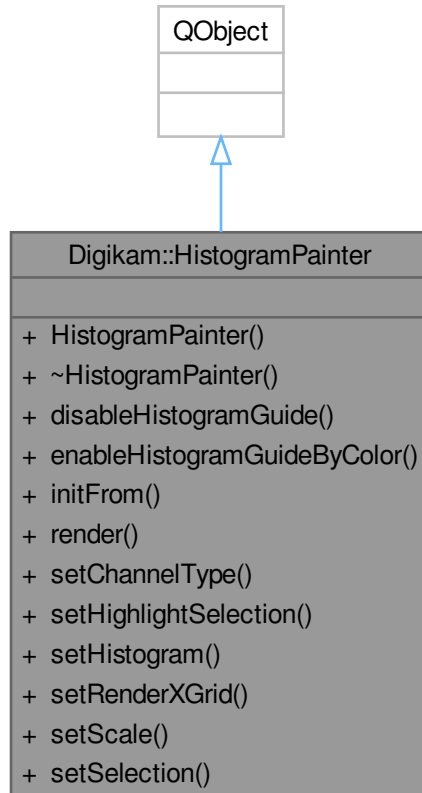

**Protected Slots**

- void **slotChannelChanged** ()
- void **slotScaleChanged** ()

## 9.678 Digikam::HistogramPainter Class Reference

A class that paints a histogram on a QPixmap.

Inheritance diagram for Digikam::HistogramPainter:

## Public Member Functions

- [HistogramPainter](#) (QObject \*const parent)  
*Constructor.*
- [~HistogramPainter](#) () override  
*Destructor.*
- void [disableHistogramGuide](#) ()  
*Disables the rendering of the color guide.*
- void [enableHistogramGuideByColor](#) (const [DColor](#) &color)  
*Starts rendering a guide that indicates where in the histogram a specified color can be found.*
- void [initFrom](#) (QWidget \*const widget)  
*Stores a widget that is used to initialize the painter used in the next call to render.*
- void [render](#) (QPixmap &paintDevice)  
*Renders the given histogram on the pixmap.*
- void [setChannelType](#) (ChannelType channelType)  
*Set the channel type to render with the next call to render.*
- void [setHighlightSelection](#) (bool highlightSelection)  
*Decide whether to highlight a specified selection in the histogram or not.*
- void [setHistogram](#) ([ImageHistogram](#) \*const histogram)  
*Set the histogram to paint with the next call to render.*
- void [setRenderXGrid](#) (bool renderXGrid)  
*Decide whether to render a separation of the histogram in x direction.*
- void [setScale](#) ([HistogramScale](#) scale)  
*Set the scale to paint the histogram with.*
- void [setSelection](#) (double selectionMin, double selectionMax)  
*Sets the selection to highlight.*

### 9.678.1 Detailed Description

Warning: before first usage of the render method, you must call [initFrom\(\)](#) to initialize the painter.

### 9.678.2 Constructor & Destructor Documentation

#### 9.678.2.1 HistogramPainter()

```
Digikam::HistogramPainter::HistogramPainter (
    QObject *const parent ) [explicit]
```

#### Parameters

<i>parent</i>	the parent for Qt's destruction mechanism
---------------	---

### 9.678.3 Member Function Documentation

#### 9.678.3.1 enableHistogramGuideByColor()

```
void Digikam::HistogramPainter::enableHistogramGuideByColor (
    const DColor & color )
```

**Parameters**

<i>color</i>	the color to highlight in the histogram
--------------	---

**9.678.3.2 initFrom()**

```
void Digikam::HistogramPainter::initFrom (
    QWidget *const widget )
```

Therefore you must ensure that this widget will not be destroyed as long as you want to use the render method without a new call to this method!!!

**Parameters**

<i>widget</i>	the widget to initialize painting from
---------------	--

**9.678.3.3 render()**

```
void Digikam::HistogramPainter::render (
    QPixmap & paintDevice )
```

The whole size of the pixmap is used for the histogram.

You must ensure that once before using this method a call to `initFrom` was made and the widget given in that call is still present.

**Parameters**

<i>paintDevice</i>	pixmap to paint the histogram on
--------------------	----------------------------------

**9.678.3.4 setChannelType()**

```
void Digikam::HistogramPainter::setChannelType (
    ChannelType channelType )
```

**Parameters**

<i>channelType</i>	channel type to render
--------------------	------------------------

**9.678.3.5 setHighlightSelection()**

```
void Digikam::HistogramPainter::setHighlightSelection (
    bool highlightSelection )
```

The selection must be defined with `setHighlightSelection`.

## Parameters

<i>highlightSelection</i>	if true, a selection will be highlighted
---------------------------	--

**9.678.3.6 setHistogram()**

```
void Digikam::HistogramPainter::setHistogram (
    ImageHistogram *const histogram )
```

## Parameters

<i>histogram</i>	an existing pointer to a histogram to paint on next call to render. The histogram must still exist at that call.
------------------	--

**9.678.3.7 setRenderXGrid()**

```
void Digikam::HistogramPainter::setRenderXGrid (
    bool renderXGrid )
```

## Parameters

<i>renderXGrid</i>	if true, a separation at some significant value in x direction is rendered.
--------------------	---

**9.678.3.8 setScale()**

```
void Digikam::HistogramPainter::setScale (
    HistogramScale scale )
```

## Parameters

<i>scale</i>	scal to paint histogram with
--------------	------------------------------

**9.678.3.9 setSelection()**

```
void Digikam::HistogramPainter::setSelection (
    double selectionMin,
    double selectionMax )
```

## Parameters

<i>selectionMin</i>	0 <= value <= 1, percent of the histogram width to start highlighting as percent. Ensure that this value is smaller then selectionMax.
<i>selectionMax</i>	0 <= value <= 1, percent of the histogram width to end highlighting as percent. Ensure that this value is greater then selectionMin.

## 9.679 Digikam::HistogramWidget Class Reference

Inheritance diagram for Digikam::HistogramWidget:

### Public Slots

- void **setChannelType** (ChannelType channel)
- void **setScaleType** (HistogramScale scale)
- void **slotMaxValueChanged** (int max)
- void **slotMinValueChanged** (int min)

## Signals

- void **signalHistogramComputationDone** (bool)
- void **signalHistogramComputationFailed** ()
- void **signalIntervalChanged** (int min, int max)
- void **signalMaximumValueChanged** (int)

## Public Member Functions

*Update image selection histogram data methods.*

## Protected Slots

- void **slotCalculationAboutToStart** ()
- void **slotCalculationFinished** (bool success)

## Protected Member Functions

- void **mouseMoveEvent** (QMouseEvent \*) override
- void **mousePressEvent** (QMouseEvent \*) override
- void **mouseReleaseEvent** (QMouseEvent \*) override
- void **paintEvent** (QPaintEvent \*) override

## Properties

- int **animationState**

## 9.679.1 Constructor & Destructor Documentation

### 9.679.1.1 HistogramWidget()

```
Digikam::HistogramWidget::HistogramWidget (
    int w,
    int h,
    QWidget *const parent = nullptr,
    bool selectMode = true,
    bool showProgress = true,
    bool statisticsVisible = false )
```

Needed to use [updateData\(\)](#) methods after to create valid instance.

## 9.680 Digikam::HistoryEdgeProperties Class Reference

Every edge has one associated object of this class.

### Public Member Functions

- [HistoryEdgeProperties](#) & **operator+=** (const [FilterAction](#) &action)

### Public Attributes

- `QList< FilterAction > actions`

### 9.680.1 Detailed Description

For two vertices v1, v2 with and edge e, v1 -> v2, describes the actions necessary to create v2 from v1: v1 -> actions[0] -> ... -> actions[n] = v2.

## 9.681 Digikam::HistoryImageld Class Reference

### Public Types

- enum [Type](#) {
  - InvalidType** = 0 , **Original** = 1 << 0 , **Intermediate** = 1 << 1 , **Source** = 1 << 2 ,
  - Current** = 1 << 3 }
- typedef `QFlags< Type > Types`

*Note: In this class, the [Type](#) is used as a simple enum, but it is also prepared for usage as flags.*

## Public Member Functions

- **HistoryImageId** ()=default  
*Creates an invalid [HistoryImageId](#).*
- **HistoryImageId** (const QString &uuid, [Type](#) type=[Current](#))  
*Creates an id with the given UUID and type.*

- [Type](#) **type** () const
- QString **uniqueHash** () const
- QString **uuid** () const

## Public Attributes

- QDateTime **m\_creationDate**  
*The creationDate of the original image.*
- QString **m\_fileName**  
*The filename of the referred file.*
- QString **m\_filePath**  
*The path of the referred file (NOTE: without file name!, including trailing slash)*
- qlonglong **m\_fileSize** = 0  
*The file size of the referred file.*
- QString **m\_originalUUID**  
*A unique identifier designating the original image from which the referred image was created.*
- [Type](#) **m\_type** = [InvalidType](#)  
*Type of this History Image Id.*
- QString **m\_uniqueHash**  
*The uniqueHash of the referred file.*
- QString **m\_uuid**  
*A unique identifier for the referred file.*

## 9.681.1 Member Enumeration Documentation

### 9.681.1.1 Type

enum `Digikam::HistoryImageId::Type`

#### Enumerator

Original	The original file (typically created by a camera)
Intermediate	A file created during the editing the history, between the original file and the current file.
Source	When a file is created from multiple files, there can be no direct original (panorama) but multiple sources, or one direct original and some other, additional source files. To record source files outside of the direct history, this type is used.
Current	The "current" file. This is a special entry: It refers to the file from which this history was read. It need not be written to the file, because it describes the file itself. There is typically exactly one current entry if the history is associated with an image; there can be no current entry.

## 9.681.2 Member Data Documentation

### 9.681.2.1 m\_originalUUID

`QString Digikam::HistoryImageId::m_originalUUID`

Typically, this is a RAW or JPEG created by the camera in the moment of taking the photograph.

### 9.681.2.2 m\_uuid

`QString Digikam::HistoryImageId::m_uuid`

This id shall be changed each time the image is edited.

## 9.682 Digikam::HistoryVertexProperties Class Reference

Every vertex has one associated object of this class.

### Public Member Functions

- bool `alwaysMarkedAs` (`HistoryImageId::Type`) const
- `ItemInfo firstItemInfo` () const
- bool `markedAs` (`HistoryImageId::Type`) const
- `HistoryVertexProperties` & `operator+=` (const `HistoryImageId` &info)
- `HistoryVertexProperties` & `operator+=` (const `ItemInfo` &info)
- `HistoryVertexProperties` & `operator+=` (const `QString` &uuid)
- bool `operator==` (const `HistoryImageId` &info) const
- bool `operator==` (const `ItemInfo` &info) const
- bool `operator==` (const `QString` &uuid) const
- bool `operator==` (qulonglong id) const

**Public Attributes**

- QList< [ItemInfo](#) > **infos**
- QList< [HistoryImageId](#) > **referredImages**
- QString **uuid**

**9.682.1 Detailed Description**

All entries in a vertex refer to *identical* images. There can be multiple referred images in a history entry. Each single [HistoryImageId](#) can resolve into none, one, or multiple [ItemInfos](#). So there is no mapping between the two fields here.

If an image is created from multiple source images (panorama etc.), there will be one vertex per source image!

**9.683 Digikam::HotPixelContainer Class Reference****Public Types**

- enum **Direction** { **TWODIM\_DIRECTION** = 0 , **VERTICAL\_DIRECTION** = 1 , **HORIZONTAL\_DIRECTION** = 2 }

## 9.684 Digikam::HotPixelFixer Class Reference

Inheritance diagram for Digikam::HotPixelFixer:

### Public Member Functions

- **HotPixelFixer** (`Dlmg *const orgImage`, `QObject *const parent`, `const HotPixelContainer &settings`)
- **HotPixelFixer** (`QObject *const parent=nullptr`)

- [Digikam::FilterAction filterAction \(\)](#) override  
*Returns the action description corresponding to currently set options.*
- [QString filterIdentifier \(\)](#) const override  
*Return the identifier for this filter in the image history.*
- void [readParameters \(const FilterAction &action\)](#) override

## Public Member Functions inherited from [Digikam::DImgThreadedFilter](#)

- [DImgThreadedFilter \(DImg \\*const orgImage, QObject \\*const parent, const QString &name=QString\(\)\)](#)  
*Constructs a filter with all arguments (ready to use).*
- [DImgThreadedFilter \(QObject \\*const parent=nullptr, const QString &name=QString\(\)\)](#)  
*Constructs a filter without argument.*
- virtual void [cancelFilter \(\)](#)  
*Cancel the threaded computation.*
- const [QString &filterName \(\)](#)
- int [filterVersion \(\)](#) const
- [DImg getTargetImage \(\)](#)
- [QList< int > multithreadedSteps \(int stop, int start=0\)](#) const  
*This method return a list of steps to process parallelized operation in filter using QtConcurrents API.*
- virtual bool [parametersSuccessfullyRead \(\)](#) const  
*Optional: error handling for readParameters.*
- virtual [QString readParametersError \(const FilterAction &actionThatFailed\)](#) const
- void [setFilterName \(const QString &name\)](#)
- void [setFilterVersion \(int version\)](#)  
*Replaying a filter action: Set the filter version.*
- void [setOriginalImage \(const DImg &orgImage\)](#)
- void [setupAndStartDirectly \(const DImg &orgImage, DImgThreadedFilter \\*const master, int progress←Begin=0, int progressEnd=100\)](#)  
*Initializes the filter for use as a slave and directly starts computation (in-thread)*
- void [setupFilter \(const DImg &orgImage\)](#)  
*You need to call this and then start filter of you used the constructor not setting an original image.*
- virtual void [startFilter \(\)](#)  
*Start the threaded computation.*
- virtual void [startFilterDirectly \(\)](#)  
*Start computation of this filter, directly in this thread.*
- virtual [QList< int > supportedVersions \(\)](#) const

## Public Member Functions inherited from [Digikam::DynamicThread](#)

- [DynamicThread \(QObject \\*const parent=nullptr\)](#)  
*This class extends QRunnable, so you have to reimplement virtual void [run\(\)](#).*
- [~DynamicThread \(\)](#) override  
*The destructor calls [stop\(\)](#) and [wait\(\)](#), but if you, in your destructor, delete any data that is accessed by your [run\(\)](#) method, you must call [stop\(\)](#) and [wait\(\)](#) before yourself.*
- bool [isFinished \(\)](#) const
- bool [isRunning \(\)](#) const
- [QThread::Priority priority \(\)](#) const
- void [setEmitSignals \(bool emitThem\)](#)
- void [setPriority \(QThread::Priority priority\)](#)  
*Sets the priority for this dynamic thread.*
- State [state \(\)](#) const

### Static Public Member Functions

- static int **CurrentVersion** ()
- static QString **DisplayName** ()
- static QString **FilterIdentifier** ()
- static QList< int > **SupportedVersions** ()

### Additional Inherited Members

### Public Types inherited from [Digikam::DynamicThread](#)

- enum **State** { **Inactive** , **Scheduled** , **Running** , **Deactivating** }

### Public Slots inherited from [Digikam::DynamicThread](#)

- void **start** ()
- void **stop** ()  
*Stop computation, sets the running flag to false.*
- void **wait** ()  
*Waits until the thread finishes.*

### Signals inherited from [Digikam::DImgThreadedFilter](#)

- void **finished** (bool success)  
*Emitted when the computation has completed.*
- void **progress** (int progress)  
*Emitted when progress info from the calculation is available.*
- void **started** ()  
*This signal is emitted when image data is available and the computation has started.*

### Signals inherited from [Digikam::DynamicThread](#)

- void **finished** ()
- void **starting** ()  
*Emitted if emitSignals is enabled.*

## Protected Member Functions inherited from [Digikam::DImgThreadedFilter](#)

- [DImgThreadedFilter](#) ([DImgThreadedFilter](#) \*const master, const [DImg](#) &orgImage, const [DImg](#) &destImage, int progressBegin=0, int progressEnd=100, const QString &name=QString())  
*Support for chaining two filters as master and thread.*
- virtual void [cleanupFilter](#) ()  
*Clean up filter data if necessary, called by stopComputation() method.*
- virtual void [initFilter](#) ()  
*Start filter operation before threaded method.*
- void [initMaster](#) ()
- void [initSlave](#) ([DImgThreadedFilter](#) \*const master, int progressBegin=0, int progressEnd=100)  
*Initialize the filter for use as a slave - reroutes progress info to master.*
- virtual int [modulateProgress](#) (int progress)  
*This method modulates the progress value from the 0..100 span to the span of this slave.*
- void [postProgress](#) (int progress)  
*Emit progress info.*
- virtual void [prepareDestImage](#) ()
- void [run](#) () override  
*List of threaded operations by filter.*
- void [setSlave](#) ([DImgThreadedFilter](#) \*const slave)  
*Inform the master that there is currently a slave.*

## Protected Member Functions inherited from [Digikam::DynamicThread](#)

- bool [m\\_wasCancelled](#) = false

## 9.684.1 Member Function Documentation

### 9.684.1.1 filterAction()

`Digikam::FilterAction` `Digikam::HotPixelFixer::filterAction ( )` [override], [virtual]

Implements `Digikam::DImgThreadedFilter`.

### 9.684.1.2 filterIdentifier()

`QString` `Digikam::HotPixelFixer::filterIdentifier ( )` const [inline], [override], [virtual]

Implements `Digikam::DImgThreadedFilter`.

### 9.684.1.3 readParameters()

```
void Digikam::HotPixelFixer::readParameters (
    const FilterAction & action ) [override], [virtual]
```

Implements `Digikam::DImgThreadedFilter`.

## 9.685 Digikam::HotPixelProps Class Reference

### Public Member Functions

- bool **fromString** (const `QString` &str)
- int **height** () const
- bool **operator==** (const `HotPixelProps` &p) const
- `QString` **toString** () const
- int **width** () const
- int **x** () const
- int **y** () const

### Static Public Member Functions

- static `QList`< `HotPixelProps` > **fromStringList** (const `QStringList` &hplst)
- static `QStringList` **toStringList** (const `QList`< `HotPixelProps` > &lst)

### Public Attributes

- int **luminosity**
- `QRect` **rect**

## 9.685.1 Member Function Documentation

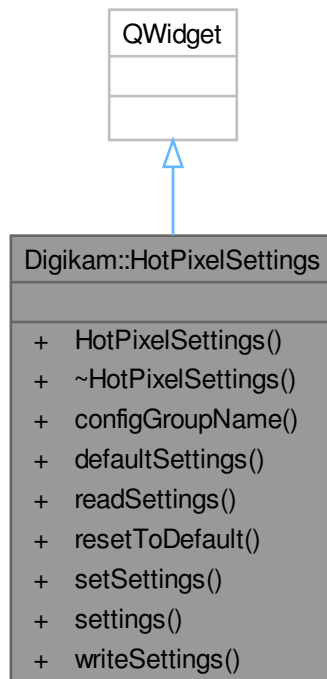

### 9.685.1.1 operator==( )

```
bool Digikam::HotPixelProps::operator==(
    const HotPixelProps & p ) const
```

NOTE:we can say they're same hotpixel spot if they touch (next to) each other horizontally or vertically, not diagonal corners

## 9.686 Digikam::HotPixelSettings Class Reference

Inheritance diagram for Digikam::HotPixelSettings:

### Signals

- void **signalHotPixels** (const `QPolygon` &pointList)
- void **signalSettingsChanged** ( )

### Public Member Functions

- **HotPixelSettings** (QWidget \*const parent)
- QString **configGroupName** () const
- [HotPixelContainer](#) **defaultSettings** () const
- void **readSettings** (const KConfigGroup &group)
- void **resetToDefault** ()
- void **setSettings** (const [HotPixelContainer](#) &settings)
- [HotPixelContainer](#) **settings** () const
- void **writeSettings** (KConfigGroup &group)

## 9.687 Digikam::HotPixelsWeights Class Reference

### Public Member Functions

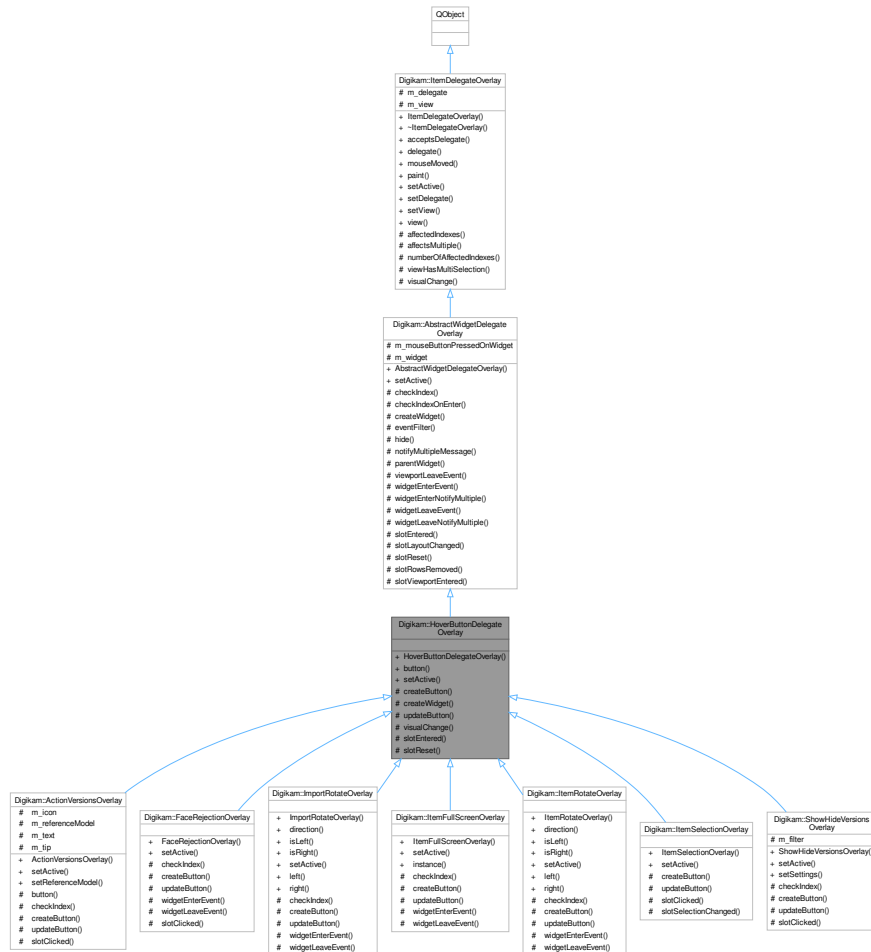

- **HotPixelsWeights** (const [HotPixelsWeights](#) &w)
- void **calculateHotPixelsWeights** ()
- unsigned int **height** () const
- [HotPixelsWeights](#) & **operator=** (const [HotPixelsWeights](#) &w)
- bool **operator==** (const [HotPixelsWeights](#) &ws) const
- double \*\* **operator[]** (int n) const
- unsigned int **polynomeOrder** () const
- const QList< QPoint > **positions** () const
- void **setHeight** (int h)
- void **setPolynomeOrder** (int order)
- void **setTwoDim** (bool td)
- void **setWidth** (int w)
- bool **twoDim** () const
- unsigned int **width** () const

### Protected Member Functions

- int **coefficientNumber** () const
- double \*\*\* **weightMatrices** () const

## 9.688 Digikam::HoverButtonDelegateOverlay Class Reference

Inheritance diagram for Digikam::HoverButtonDelegateOverlay:

### Public Member Functions

- **HoverButtonDelegateOverlay** (QObject \*const parent)
- **ItemViewHoverButton** \* **button** () const
- void **setActive** (bool active) override  
Will call *createButton()*.

### Public Member Functions inherited from Digikam::AbstractWidgetDelegateOverlay

- **AbstractWidgetDelegateOverlay** (QObject \*const parent)  
This class provides functionality for using a widget in an overlay.

## Public Member Functions inherited from Digikam::ItemDelegateOverlay

- **ItemDelegateOverlay** (QObject \*const parent=nullptr)
- virtual bool **acceptsDelegate** (QAbstractItemDelegate \*) const
- QAbstractItemDelegate \* **delegate** () const
- virtual void **mouseMoved** (QMouseEvent \*e, const QRect &visualRect, const QModelIndex &index)  
*Only these two methods are implemented as virtual methods.*
- virtual void **paint** (QPainter \*p, const QStyleOptionViewItem &option, const QModelIndex &index)
- void **setDelegate** (QAbstractItemDelegate \*delegate)
- void **setView** (QAbstractItemView \*view)
- QAbstractItemView \* **view** () const

## Protected Slots

- void **slotEntered** (const QModelIndex &index) override
- void **slotReset** () override

## Protected Slots inherited from Digikam::AbstractWidgetDelegateOverlay

- virtual void **slotEntered** (const QModelIndex &index)  
*Default implementation shows the widget iff the index is valid and checkIndex returns true.*
- virtual void **slotLayoutChanged** ()
- virtual void **slotReset** ()  
*Default implementations of these three slots call `hide()`*
- virtual void **slotRowsRemoved** (const QModelIndex &parent, int start, int end)
- virtual void **slotViewportEntered** ()

## Protected Slots inherited from Digikam::ItemDelegateOverlay

### Protected Member Functions

- virtual **ItemViewHoverButton** \* **createButton** ()=0  
*Create your widget here.*
- QWidget \* **createWidget** () override  
*Create your widget here.*
- virtual void **updateButton** (const QModelIndex &index)=0  
*Called when a new index is entered.*
- void **visualChange** () override  
*Called when any change from the delegate occurs - when the overlay is installed, when size hints, styles or fonts change.*

## Protected Member Functions inherited from [Digikam::AbstractWidgetDelegateOverlay](#)

- virtual bool [checkIndex](#) (const QModelIndex &index) const  
*Return true here if you want to show the overlay for the given index.*
- bool [checkIndexOnEnter](#) (const QModelIndex &index) const  
*Utility method called from slotEntered.*
- bool [eventFilter](#) (QObject \*obj, QEvent \*event) override
- virtual void [hide](#) ()  
*Called when the widget shall be hidden (mouse cursor left index, viewport, uninstalled etc.).*
- virtual QString [notifyMultipleMessage](#) (const QModelIndex &, int number)
- QWidget \* [parentWidget](#) () const  
*Returns the widget to be used as parent for your widget created in [createWidget\(\)](#)*
- virtual void [viewportLeaveEvent](#) (QObject \*obj, QEvent \*event)  
*Called when a QEvent::Leave of the viewport is received.*
- virtual void [widgetEnterEvent](#) ()  
*Called when a QEvent::Enter resp.*
- void [widgetEnterNotifyMultiple](#) (const QModelIndex &index)  
*A sample implementation for above methods.*
- virtual void [widgetLeaveEvent](#) ()
- void [widgetLeaveNotifyMultiple](#) ()

## Protected Member Functions inherited from [Digikam::ItemDelegateOverlay](#)

- QList< QModelIndex > [affectedIndexes](#) (const QModelIndex &index) const
- bool [affectsMultiple](#) (const QModelIndex &index) const  
*For the context that an overlay can affect multiple items: Assuming the currently overlaid index is given.*
- int [numberOfAffectedIndexes](#) (const QModelIndex &index) const
- bool [viewHasMultiSelection](#) () const  
*Utility method.*

## Additional Inherited Members

## Signals inherited from [Digikam::ItemDelegateOverlay](#)

- void [hideNotification](#) ()
- void [requestNotification](#) (const QModelIndex &index, const QString &message)
- void [update](#) (const QModelIndex &index)

## Protected Attributes inherited from [Digikam::AbstractWidgetDelegateOverlay](#)

- bool [m\\_mouseButtonPressedOnWidget](#) = false
- QWidget \* [m\\_widget](#) = nullptr

## Protected Attributes inherited from [Digikam::ItemDelegateOverlay](#)

- QAbstractItemDelegate \* [m\\_delegate](#) = nullptr
- QAbstractItemView \* [m\\_view](#) = nullptr

## 9.688.1 Member Function Documentation

### 9.688.1.1 createButton()

```
virtual ItemViewHoverButton * Digikam::HoverButtonDelegateOverlay::createButton ( ) [protected],  
[pure virtual]
```

Pass view() as parent.

Implemented in [Digikam::FaceRejectionOverlay](#), [Digikam::ItemFullScreenOverlay](#), [Digikam::ItemRotateOverlay](#), [Digikam::ItemSelectionOverlay](#), [Digikam::ShowHideVersionsOverlay](#), [Digikam::ActionVersionsOverlay](#), and [Digikam::ImportRotateOverlay](#).

### 9.688.1.2 createWidget()

```
QWidget * Digikam::HoverButtonDelegateOverlay::createWidget ( ) [override], [protected], [virtual]
```

When creating the object, pass [parentWidget\(\)](#) as parent widget. Ownership of the object is passed. It will be deleted in [setActive\(false\)](#).

Implements [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.688.1.3 setActive()

```
void Digikam::HoverButtonDelegateOverlay::setActive (   
    bool active ) [override], [virtual]
```

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

Reimplemented in [Digikam::ItemFullScreenOverlay](#), [Digikam::ItemRotateOverlay](#), [Digikam::ItemSelectionOverlay](#), [Digikam::ShowHideVersionsOverlay](#), and [Digikam::ImportRotateOverlay](#).

### 9.688.1.4 updateButton()

```
virtual void Digikam::HoverButtonDelegateOverlay::updateButton (   
    const QModelIndex & index ) [protected], [pure virtual]
```

Reposition your button here, adjust and store state.

Implemented in [Digikam::FaceRejectionOverlay](#), [Digikam::ItemFullScreenOverlay](#), [Digikam::ItemRotateOverlay](#), [Digikam::ItemSelectionOverlay](#), [Digikam::ShowHideVersionsOverlay](#), [Digikam::ActionVersionsOverlay](#), and [Digikam::ImportRotateOverlay](#).

### 9.688.1.5 visualChange()

```
void Digikam::HoverButtonDelegateOverlay::visualChange ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemDelegateOverlay](#).

## 9.689 Digikam::HSLContainer Class Reference

### Public Attributes

- double **hue** = 0.0
- double **lightness** = 0.0
- double **saturation** = 0.0
- double **vibrance** = 0.0

## 9.690 Digikam::HSLFilter Class Reference

Inheritance diagram for Digikam::HSLFilter:

### Public Member Functions

- **HSLFilter** (`DImg *const orgImage`, `QObject *const parent=nullptr`, `const HSLContainer &settings=HSLContainer()`)
- **HSLFilter** (`QObject *const parent=nullptr`)

- [FilterAction filterAction \(\)](#) override  
*Returns the action description corresponding to currently set options.*
- [QString filterIdentifier \(\)](#) const override

## 9.694 Digikam::HTMLWidgetPage Class Reference

Inheritance diagram for Digikam::HTMLWidgetPage:

### Signals

- void **signalHTMLEvents** (const QStringList &events)
- void **signalMessageEvent** (const QString &message)

### Public Member Functions

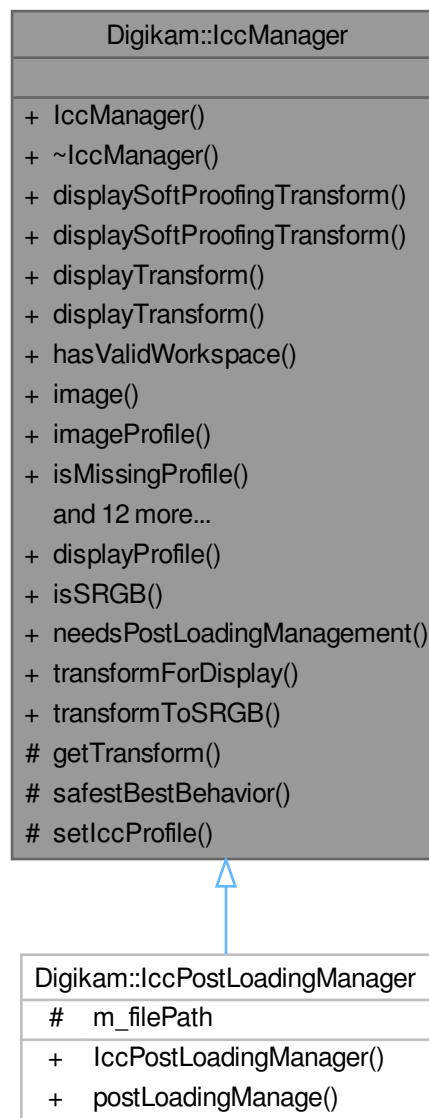

- **HTMLWidgetPage** ([HTMLWidget](#) \*const parent=nullptr)

**Protected Member Functions**

- void **javascriptConsoleMessage** (JavaScriptConsoleMessageLevel, const QString &, int, const QString &) override

**9.695 Digikam::IccManager Class Reference**

Inheritance diagram for Digikam::IccManager:

**Public Member Functions**

- `IccManager` (const `DImg` &image, const `ICCSettingsContainer` &settings=`IccSettings::instance()` ->settings())

Constructs an *IccManager* object.

- **IccTransform displaySoftProofingTransform** (const [IccProfile](#) &deviceProfile, const [IccProfile](#) &displayProfile) Profile)
- **IccTransform displaySoftProofingTransform** (const [IccProfile](#) &deviceProfile, QWidget \*const displayingWidget=nullptr) Widget=nullptr)
  - Returns a display transform, with soft-proofing enabled for the given device profile.
- **IccTransform displayTransform** (const [IccProfile](#) &displayProfile)
- **IccTransform displayTransform** (QWidget \*const displayingWidget=nullptr)
- bool **hasValidWorkspace** () const
- **DImg image** () const
- **IccProfile imageProfile** (ICCSettingsContainer::Behavior behavior, const [IccProfile](#) &specifiedProfile=[IccProfile](#)())
  - Returns the profile that will be used to interpret the image, using the given behavior.
- bool **isMissingProfile** () const
- bool **isProfileMismatch** () const
- bool **isUncalibratedColor** () const
- **DImgLoaderObserver \* observer** () const
- void **setObserver** ([DImgLoaderObserver](#) \*const observer)
- **ICCSettingsContainer settings** () const
- void **transform** (ICCSettingsContainer::Behavior behavior, const [IccProfile](#) &specifiedProfile=[IccProfile](#)())
  - Same as above, but not using default settings but the given settings.
- void **transformDefault** ()
  - Transforms the image for full editing, using default settings.
- void **transformForDisplay** ()
  - Transforms the image for display on screen.
- void **transformForDisplay** (const [IccProfile](#) &displayProfile)
- void **transformForDisplay** (QWidget \*const widget)
- void **transformForOutput** (const [IccProfile](#) &outputProfile)
  - Transforms the image for output to the specified output profile.
- void **transformToSRGB** ()
  - Transforms the image to sRGB.

### Static Public Member Functions

- static [IccProfile](#) **displayProfile** (QWidget \*const displayingWidget=nullptr)
- static bool **isSRGB** (const [DImg](#) &img)
  - Returns true if a call to [transformToSRGB\(\)](#) would have an effect.
- static bool **needsPostLoadingManagement** (const [DImg](#) &img)
  - Returns true if the given image is marked as needing user interaction for further color management decision after loading.
- static void **transformForDisplay** (QImage &qimage, const [IccProfile](#) &displayProfile1=[displayProfile](#)())
  - Transforms the given QImage from sRGB to given display profile.
- static void **transformToSRGB** (QImage &qimage, const [IccProfile](#) &inputProfile)
  - Transforms the given QImage from the given inputProfile to sRGB.

### Protected Member Functions

- void **getTransform** ([IccTransform](#) &trans, ICCSettingsContainer::Behavior behavior, const [IccProfile](#) &specifiedProfile)
- ICCSettingsContainer::Behavior **safestBestBehavior** () const
- void **setIccProfile** (const [IccProfile](#) &profile)

## 9.695.1 Constructor & Destructor Documentation

### 9.695.1.1 IccManager()

```
Digikam::IccManager::IccManager (
    const DImg & image,
    const ICCSettingsContainer & settings = IccSettings::instance\(\)->settings() )
[explicit]
```

The [DImg](#) will be edited. The `filePath` is for display only.

## 9.695.2 Member Function Documentation

### 9.695.2.1 needsPostLoadingManagement()

```
bool Digikam::IccManager::needsPostLoadingManagement (
    const DImg & img ) [static]
```

If this returns true, use [IccPostLoadingManager](#) to do this.

### 9.695.2.2 transformDefault()

```
void Digikam::IccManager::transformDefault ( )
```

If the default settings require showing a dialog, the image is marked as such but no action is taken. See [IccPostLoadingManager](#).

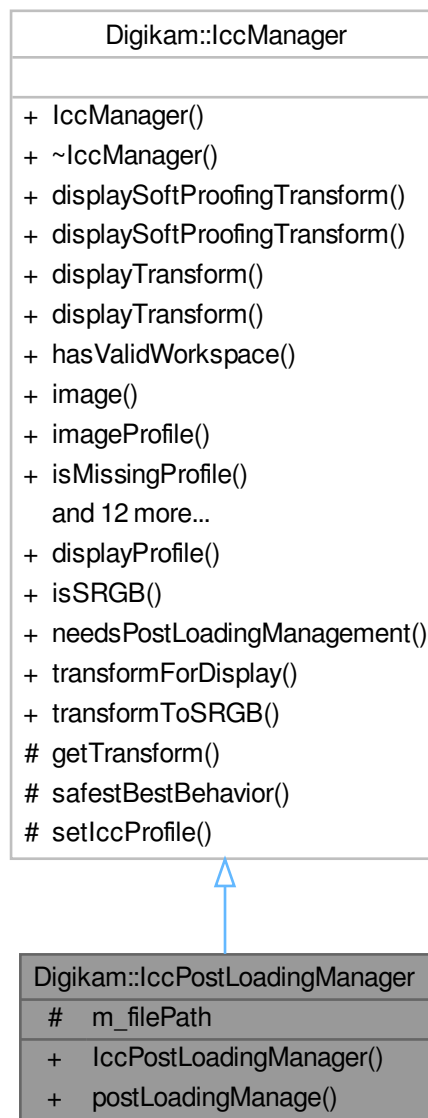

### 9.695.2.3 transformForDisplay()

```
void Digikam::IccManager::transformForDisplay ( )
```

The result is not suitable for editing or storage. You can specify the widget in which the image will be displayed, or specify the display profile yourself. You can retrieve the profile with `displayProfile()` and pass it to [transformForDisplay\(\)](#) later (in a thread), or you can get a transform from `displayTransform` and apply it yourself.

## 9.696 Digikam::IccPostLoadingManager Class Reference

Inheritance diagram for Digikam::IccPostLoadingManager:

### Public Member Functions

- [IccPostLoadingManager](#) (DImg &image, const QString &filePath=QString(), const [ICCSettingsContainer](#) &settings=[IccSettings::instance\(\)](#) ->settings())  
*Constructs an [IccPostLoadingManager](#) object.*
- [IccTransform](#) [postLoadingManage](#) (QWidget \*const parent=nullptr)  
*Carries out color management asking the user for his decision.*

## Public Member Functions inherited from Digikam::lccManager

- **lccManager** (const **DImg** &image, const **ICCSettingsContainer** &settings=**lccSettings::instance()** ->settings())  
*Constructs an **lccManager** object.*

- [ICCSettingsContainer::Behavior](#) **safestBestBehavior** () const
- void **setIccProfile** (const [IccProfile](#) &profile)

## 9.696.1 Constructor & Destructor Documentation

### 9.696.1.1 IccPostLoadingManager()

```
Digikam::IccPostLoadingManager::IccPostLoadingManager (
    DImg & image,
    const QString & filePath = QString\(\),
    const ICCSettingsContainer & settings = IccSettings::instance\(\)->settings() )
[explicit]
```

The [DImg](#) will be edited. The filePath is for display only.

## 9.696.2 Member Function Documentation

### 9.696.2.1 postLoadingManage()

```
IccTransform Digikam::IccPostLoadingManager::postLoadingManage (
    QWidget *const parent = nullptr )
```

Afterwards, needsPostLoadingManagement will return false.

## 9.697 Digikam::ICCPreviewWidget Class Reference

Inheritance diagram for [Digikam::ICCPreviewWidget](#):

**Public Slots**

- void **slotClearPreview** ()
- void **slotShowPreview** (const QUrl &url)

**Public Member Functions**

- **ICCPreviewWidget** (QWidget \*const parent=nullptr)

**9.698 Digikam::IccProfile Class Reference****Public Types**

- enum **ProfileType** {  
**InvalidType** , **Input** , **Output** , **Display** ,  
**Abstract** , **ColorSpace** , **DeviceLink** , **NamedColor** }

**Public Member Functions**

- **IccProfile** ()  
*Creates a null profile.*
- **IccProfile** (const **IccProfile** &other)
- **IccProfile** (const QByteArray &data)  
*Creates a profile from the given data in memory.*
- **IccProfile** (const QString &filePath)  
*Creates a profile from the given file.*
- void **close** ()  
*Close the profile, freeing resources.*
- QByteArray **data** ()  
*Returns the raw profile data.*
- QString **description** ()  
*Reads the profile description.*
- QString **filePath** () const  
*Returns the filename that this profile was read from.*
- void \* **handle** () const  
*Access to the LCMS cmsHPROFILE handle.*
- bool **isNull** () const
- bool **isOpen** () const  
*Returns if the profile is opened.*
- bool **isSameProfileAs** (**IccProfile** &other)  
*This method compares the actual profile data bit by bit.*
- bool **open** ()  
*Open this profile.*
- **operator void** \* () const
- bool **operator!=** (const **IccProfile** &other) const
- **IccProfile** & **operator=** (const **IccProfile** &other)
- bool **operator==** (const **IccProfile** &other) const  
*Returns true if both profiles are null, if both profiles are created from the same file profile, or if the loaded profile data is identical.*
- **ProfileType** **type** ()
- bool **writeToFile** (const QString &filePath)  
*Writes the profile to the given file.*

## Static Public Member Functions

- static [IccProfile](#) **adobeRGB** ()
- static void **considerOriginalAdobeRGB** (const QString &filePath)
- static QList< [IccProfile](#) > **defaultProfiles** ()  
*Returns a list with the profiles above.*
- static QStringList **defaultSearchPaths** ()  
*Returns the default search paths for ICC profiles.*
- static [IccProfile](#) **proPhotoRGB** ()
- static QList< [IccProfile](#) > **scanDirectories** (const QStringList &dirs)
- static [IccProfile](#) **sRGB** ()  
*Returns the profiles available with RawEngine.*
- static [IccProfile](#) **wideGamutRGB** ()

## 9.698.1 Member Enumeration Documentation

### 9.698.1.1 ProfileType

```
enum Digikam::IccProfile::ProfileType
```

#### Enumerator

InvalidType	Returned for a null profile or an unknown (non-standard) profile type.
Input	For an input device like a scanner or digital camera.
Output	For an output device like a printer.
Display	For a display device like a monitor.

## 9.698.2 Member Function Documentation

### 9.698.2.1 close()

```
void Digikam::IccProfile::close ( )
```

You can re-open. Called automatically at destruction.

### 9.698.2.2 data()

```
QByteArray Digikam::IccProfile::data ( )
```

Reads the data from disk if loaded from disk and not yet loaded.

### 9.698.2.3 defaultSearchPaths()

```
QStringList Digikam::IccProfile::defaultSearchPaths ( ) [static]
```

This does not include any user-specified settings.

#### 9.698.2.4 description()

```
QString Digikam::IccProfile::description ( )
```

Opens the profile if necessary.

#### 9.698.2.5 filePath()

```
QString Digikam::IccProfile::filePath ( ) const
```

returns a null QString() if this profile was loaded from memory.

#### 9.698.2.6 open()

```
bool Digikam::IccProfile::open ( )
```

Returns true if the operation succeeded or the profile is already open. Returns false if the profile is null or the operation failed. You need to open each profile after construction.

#### 9.698.2.7 operator==( )

```
bool Digikam::IccProfile::operator== (
    const IccProfile & other ) const
```

Note: This will not ensure that the data is loaded. Use `isSameProfile()`.

#### 9.698.2.8 sRGB()

```
IccProfile Digikam::IccProfile::sRGB ( ) [static]
```

You still need to call `open()` on them.

#### 9.698.2.9 type()

```
IccProfile::ProfileType Digikam::IccProfile::type ( )
```

< 'nkb', proprietary in Nikon profiles

## 9.699 Digikam::ICCPProfileInfoDlg Class Reference

Inheritance diagram for Digikam::ICCPProfileInfoDlg:

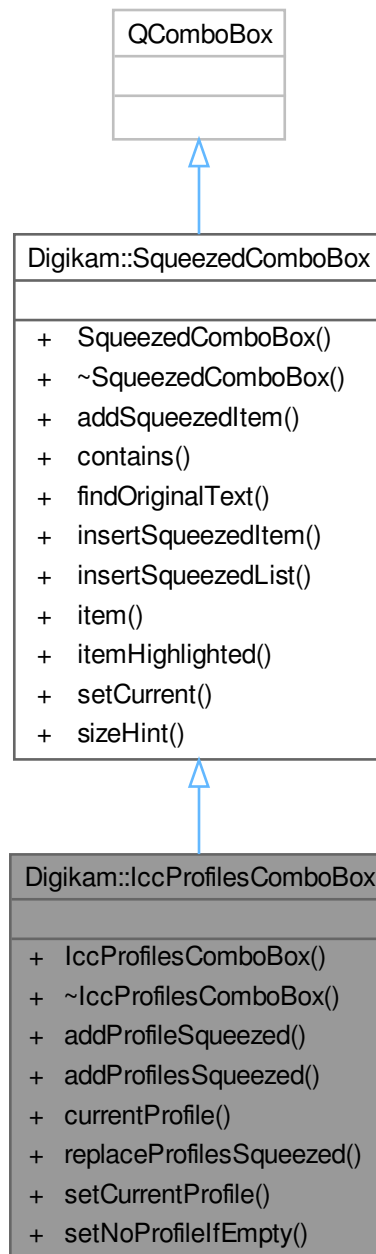

### Public Member Functions

- **ICCPProfileInfoDlg** (`QWidget *const parent`, `const QString &profilePath`, `const IccProfile &profile` ←  
Data=`IccProfile()`)

## 9.700 Digikam::IccProfilesComboBox Class Reference

Inheritance diagram for Digikam::IccProfilesComboBox:

### Public Member Functions

- `IccProfilesComboBox` (`QWidget *const parent=nullptr`)
- void `addProfileSqueezed` (`const IccProfile &profile, const QString &description=QString()`)

- Add the given profile with the given description, or, if null, a standard description.*
- void **addProfilesSqueezed** (const QList< [IccProfile](#) > &profiles)
    - Checks the given profiles for validity, creates a suitable description (ICC profile description, file path), removes duplicates by file path, sorts them and adds them in sorted order.*
  - [IccProfile](#) **currentProfile** () const
    - Retrieves the current profile, or a null profile if none is selected.*
  - void **replaceProfilesSqueezed** (const QList< [IccProfile](#) > &profiles)
    - Clears, does the same as addProfilesSqueezed, and restores the current entry if possible.*
  - void **setCurrentProfile** (const [IccProfile](#) &profile)
    - Sets the current profile.*
  - void **setNoProfileIfEmpty** (const QString &message)
    - Sets a message the is displayed in the combo box and disables the combo box, if the combo box is currently empty.*

## Public Member Functions inherited from [Digikam::SqueezedComboBox](#)

- [SqueezedComboBox](#) (QWidget \*const parent=nullptr, const char \*name=nullptr)
  - Constructor.*
- [~SqueezedComboBox](#) () override
  - destructor*
- void **addSqueezedItem** (const QString &newItem, const QVariant &userData=QVariant())
  - Append an item.*
- bool **contains** (const QString &text) const
  - Returns true if the combobox contains the original (not-squeezed) version of text.*
- int **findOriginalText** (const QString &text, Qt::CaseSensitivity cs=Qt::CaseSensitive) const
  - Returns the index of the combobox if found the original (not-squeezed) version of text.*
- void **insertSqueezedItem** (const QString &newItem, int index, const QVariant &userData=QVariant())
  - This inserts a item to the list.*
- void **insertSqueezedList** (const QStringList &newItems, int index)
  - This inserts items to the list.*
- QString **item** (int index) const
  - This method returns the full text (not squeezed) for the index.*
- QString **itemHighlighted** () const
  - This method returns the full text (not squeezed) of the currently highlighted item.*
- void **setCurrent** (const QString &itemText)
  - Set the current item to the one matching the given text.*
- QSize **sizeHint** () const override
  - Sets the [sizeHint\(\)](#) of this widget.*

## Additional Inherited Members

## Signals inherited from [Digikam::SqueezedComboBox](#)

- void **signalItemActivated** (const QString &)

## 9.700.1 Constructor & Destructor Documentation

### 9.700.1.1 IccProfilesComboBox()

```
Digikam::IccProfilesComboBox::IccProfilesComboBox (
    QWidget *const parent = nullptr ) [explicit]
```

#### Note

Use the signal `currentIndexChanged(int)` for change notification

## 9.700.2 Member Function Documentation

### 9.700.2.1 addProfileSqueezed()

```
void Digikam::IccProfilesComboBox::addProfileSqueezed (
    const IccProfile & profile,
    const QString & description = QString() )
```

Does not test for duplicity, does not sort into existing profiles.

### 9.700.2.2 setCurrentProfile()

```
void Digikam::IccProfilesComboBox::setCurrentProfile (
    const IccProfile & profile )
```

If profile is not in the list, sets no current item (-1)

## 9.701 Digikam::IccProfilesMenuAction Class Reference

Inheritance diagram for Digikam::IccProfilesMenuAction:

### Signals

- void **triggered** (const [IccProfile](#) &profile)

### Public Member Functions

- **IccProfilesMenuAction** (const QIcon &icon, const QString &text, QObject \*const parent)
- **IccProfilesMenuAction** (const QString &text, QObject \*const parent)
- void **addProfile** (const [IccProfile](#) &profile, const QString &description=QString())
  - Add the given profile with the given description, or, if null, a standard description.*
- void **addProfiles** (const QList< [IccProfile](#) > &profile)
  - Checks the given profiles for validity, creates a suitable description (ICC profile description, file path), removes duplicates (in newly added list) by file path, sorts them and adds them in sorted order.*
- void **disableIfEmpty** ()
  - Disables if the menu is currently empty.*
- QObject \* **parentObject** () const
  - Return the parent QObject.*
- void **replaceProfiles** (const QList< [IccProfile](#) > &profile)
  - Equivalent to calling clear() and addProfiles().*

### Protected Slots

- void **slotTriggered** (QObject \*)

### Protected Attributes

- QObject \* **m\_parent** = nullptr

## 9.701.1 Member Function Documentation

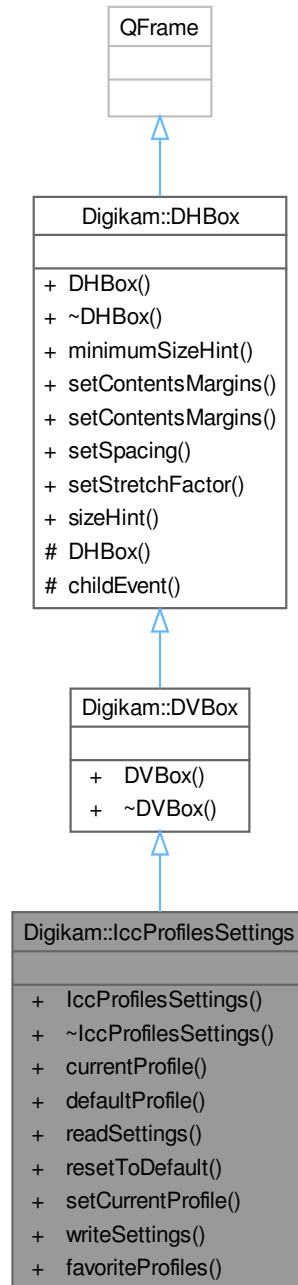

### 9.701.1.1 addProfile()

```
void Digikam::IccProfilesMenuAction::addProfile (
    const IccProfile & profile,
    const QString & description = QString() )
```

Does not test for duplicity, does not sort into existing profiles.

### 9.703.1 Member Function Documentation

#### 9.703.1.1 getMetadataTitle()

```
QString Digikam::ICCPProfileWidget::getMetadataTitle ( ) const [override], [virtual]
```

Implements [Digikam::MetadataWidget](#).

#### 9.703.1.2 getTagDescription()

```
QString Digikam::ICCPProfileWidget::getTagDescription (
    const QString & key ) [override], [virtual]
```

Reimplemented from [Digikam::MetadataWidget](#).

#### 9.703.1.3 getTagTitle()

```
QString Digikam::ICCPProfileWidget::getTagTitle (
    const QString & key ) [override], [virtual]
```

Reimplemented from [Digikam::MetadataWidget](#).

#### 9.703.1.4 loadFromURL()

```
bool Digikam::ICCPProfileWidget::loadFromURL (
    const QUrl & url ) [override], [virtual]
```

Implements [Digikam::MetadataWidget](#).

## 9.704 Digikam::IccRenderingIntentComboBox Class Reference

Inheritance diagram for Digikam::IccRenderingIntentComboBox:

### Public Member Functions

- **IccRenderingIntentComboBox** (`QWidget *const parent=nullptr`)
- `int intent ()` const
- `void setIntent (int intent)`

## 9.705 Digikam::IccSettings Class Reference

Inheritance diagram for Digikam::IccSettings:

### Signals

- void **signalICCSettingsChanged** (const [ICCSettingsContainer](#) &current, const [ICCSettingsContainer](#) &previous)
- void **signalSettingsChanged** ()

### Public Member Functions

- [QList< IccProfile >](#) **allProfiles** ()
- [QList< IccProfile >](#) **displayProfiles** ()  
*Get available profiles suitable as monitor/display profile.*
- [QList< IccProfile >](#) **inputProfiles** ()  
*Get available profiles suitable as input profile.*
- bool **isEnabled** () const  
*Returns if color management is enabled.*
- void [loadAllProfilesProperties](#) ()

- IccProfile* caches some of its properties (description, type) when it was read once.

  - **IccProfile** `monitorProfile` (QWidget \*const widget=nullptr)
 

Returns the monitor profile (for color managed view).
  - bool **monitorProfileFromSystem** () const
 

Returns if the monitor profile (as returned by `monitorProfile()`) is set system-wide, so that the `monitorProfile` field of the current settings need not be set and will not be used by `monitorProfile()`.
  - QList< **IccProfile** > **outputProfiles** ()
 

Get available profiles suitable as proof/output profiles.
  - QList< **IccProfile** > **profilesForDescription** (const QString &description)
 

Returns a list of profiles with the given description()
  - void **setIccPath** (const QString &path)
  - void **setSettings** (const **ICCSettingsContainer** &settings)
 

Sets the current ICC settings and writes them to config.
  - **ICCSettingsContainer** **settings** ()
 

Returns the current ICC settings.
  - void **setUseManagedPreviews** (bool `useManagedPreviews`)
  - void **setUseManagedView** (bool `useManagedView`)
 

Set single parts of the settings.
  - bool **useManagedPreviews** () const
 

Returns if color management for previews is enabled.
  - QList< **IccProfile** > **workspaceProfiles** ()
 

Get available profiles suitable as workspace profile.

### Static Public Member Functions

- static **IccSettings** \* **instance** ()
 

Global container for ICC settings.

### Friends

- class **IccSettingsCreator**
- class **Private**

## 9.705.1 Member Function Documentation

### 9.705.1.1 instance()

```
IccSettings * Digikam::IccSettings::instance ( ) [static]
```

All accessor methods are thread-safe.

### 9.705.1.2 loadAllProfilesProperties()

```
void Digikam::IccSettings::loadAllProfilesProperties ( )
```

Subsequently, to read these values no opening is needed. This ensures that all profiles have these values read. May imply scanning and opening all profiles.

### 9.705.1.3 monitorProfile()

```

IccProfile Digikam::IccSettings::monitorProfile (
    QWidget *const widget = nullptr )

```

If there are multiple screens, a system-wide settings specifies the monitor profile, and the widget parameter is passed, the returned profile is for the widget's screen. If no settings is specified, the default sRGB profile is returned.

## 9.706 Digikam::IccSettingsContainer Class Reference

### Public Types

- typedef QFlags< BehaviorEnum > **Behavior**
- enum BehaviorEnum {
  - InvalidBehavior** = 0 , **UseEmbeddedProfile** = 1 << 0 , **UseSRGB** = 1 << 1 , **UseWorkspace** = 1 << 2 , **UseDefaultInputProfile** = 1 << 3 , **UseSpecifiedProfile** = 1 << 4 , **AutomaticColors** = 1 << 5 , **DoNotInterpret** = 1 << 6 ,

## 9.706.1 Member Enumeration Documentation

### 9.706.1.1 BehaviorEnum

enum `Digikam::ICCSettingsContainer::BehaviorEnum`

Enumerator

<code>InvalidBehavior</code>	Note: Values are stored in config - keep them constant.
<code>UseEmbeddedProfile</code>	Interpretation of the image data.
<code>KeepProfile</code>	Transformation / target profile.
<code>LeaveFileUntagged</code>	Special flags and values.
<code>PreserveEmbeddedProfile</code>	ready combinations for convenience

## 9.707 Digikam::lccTransform Class Reference

### Public Types

- enum `RenderingIntent` { `Perceptual` = 0 , `RelativeColorimetric` = 1 , `Saturation` = 2 , `AbsoluteColorimetric` = 3 }

### Public Member Functions

- `lccTransform` (const `lccTransform` &other)
- bool `apply` (`DImage` &image, `DImageLoaderObserver` \*const observer=nullptr)
  - Apply this transform with the set profiles and options to the image.*
- bool `apply` (`QImage` &qimage)
  - Apply this transform to the QImage.*
- `QColor` `checkGamutMaskColor` () const
- void `close` ()
  - Closes the transform, not the profiles.*
- `lccProfile` `effectiveInputProfile` () const
  - Returns the embedded profile; if none is set, the input profile; if none is set, sRGB.*
- `lccProfile` `embeddedProfile` () const
  - Returns the contained profiles.*
- `lccProfile` `inputProfile` () const
- `RenderingIntent` `intent` () const
- bool `isCheckingGamut` () const
- bool `isUsingBlackPointCompensation` () const
- `lccTransform` & `operator=` (const `lccTransform` &other)
- `lccProfile` `outputProfile` () const
- `RenderingIntent` `proofIntent` () const
- `lccProfile` `proofProfile` () const
- void `setCheckGamut` (bool checkGamut)
- void `setCheckGamutMaskColor` (const `QColor` &color)
- void `setDoNotEmbedOutputProfile` (bool doNotEmbed)
  - Call this with 'true' if you do not want the output profile to be set as embedded profile after `apply()` did a transformation.*
- void `setEmbeddedProfile` (const `DImage` &image)

*Sets the input profiles of this transform.*

- void **setInputProfile** (const [IccProfile](#) &profile)
- void **setIntent** (int intent)
- void **setIntent** (RenderingIntent intent)

*Set options.*

- void **setOutputProfile** (const [IccProfile](#) &profile)

*Sets the output transform.*

- void **setProofIntent** (int intent)
- void **setProofIntent** (RenderingIntent intent)
- void **setProofProfile** (const [IccProfile](#) &profile)

*Makes this transform a proofing transform, if profile is not null.*

- void **setUseBlackPointCompensation** (bool useBPC)
- bool **willHaveEffect** ()

*Returns if this transformation will have an effect, i.e.*

## Static Public Member Functions

- static void **init** ()

*Initialize LittleCMS library.*

## 9.707.1 Member Function Documentation

### 9.707.1.1 **apply()** [1/2]

```
bool Digikam::IccTransform::apply (
    DImg & image,
    DImgLoaderObserver *const observer = nullptr )
```

Optionally pass an observer to get progress information.

### 9.707.1.2 **apply()** [2/2]

```
bool Digikam::IccTransform::apply (
    QImage & qimage )
```

This has only basic functionality.

### 9.707.1.3 **close()**

```
void Digikam::IccTransform::close ( )
```

Called at destruction.

### 9.707.1.4 **setDoNotEmbedOutputProfile()**

```
void Digikam::IccTransform::setDoNotEmbedOutputProfile (
    bool doNotEmbed )
```

Default is to set the output profile as embedded profile (false).

### 9.707.1.5 setEmbeddedProfile()

```
void Digikam::IccTransform::setEmbeddedProfile (
    const DImg & image )
```

You can call both setEmbeddedProfile and setInputProfile. If the image contains an embedded profile this profile is used and takes precedence over the set input profile, which is used without an embedded profile. If none is set, sRGB is used.

### 9.707.1.6 willHaveEffect()

```
bool Digikam::IccTransform::willHaveEffect ( )
```

if effective input profile and output profile are different.

## 9.708 Digikam::IccTransformFilter Class Reference

Inheritance diagram for Digikam::IccTransformFilter:

### Public Member Functions

- **IccTransformFilter** (**Dimg** \*const orgImage, **QObject** \*const parent, const **IccTransform** &transform)
- **IccTransformFilter** (**QObject** \*const parent=nullptr)

- [FilterAction filterAction \(\)](#) override  
*Returns the action description corresponding to currently set options.*
- [QString filterIdentifier \(\)](#) const override  
*Return the identifier for this filter in the image history.*
- [bool parametersSuccessfullyRead \(\)](#) const override  
*Optional: error handling for readParameters.*
- [void readParameters \(const FilterAction &action\)](#) override
- [QString readParametersError \(const FilterAction &actionThatFailed\)](#) const override

## Public Member Functions inherited from [Digikam::DImgThreadedFilter](#)

- [DImgThreadedFilter \(DImg \\*const orgImage, QObject \\*const parent, const QString &name=QString\(\)\)](#)  
*Constructs a filter with all arguments (ready to use).*
- [DImgThreadedFilter \(QObject \\*const parent=nullptr, const QString &name=QString\(\)\)](#)  
*Constructs a filter without argument.*
- [virtual void cancelFilter \(\)](#)  
*Cancel the threaded computation.*
- [const QString &filterName \(\)](#)
- [int filterVersion \(\)](#) const
- [DImg getTargetImage \(\)](#)
- [QList< int > multithreadedSteps \(int stop, int start=0\)](#) const  
*This method return a list of steps to process parallelized operation in filter using QtConcurrents API.*

### 9.708.1 Member Function Documentation

#### 9.708.1.1 [filterAction\(\)](#)

[FilterAction](#) [Digikam::IccTransformFilter::filterAction \( \)](#) [override], [virtual]

Implements [Digikam::DImgThreadedFilter](#).

#### 9.708.1.2 [filterIdentifier\(\)](#)

[QString](#) [Digikam::IccTransformFilter::filterIdentifier \( \)](#) const [inline], [override], [virtual]

Implements [Digikam::DImgThreadedFilter](#).

#### 9.708.1.3 [filterImage\(\)](#)

[void](#) [Digikam::IccTransformFilter::filterImage \( \)](#) [override], [protected], [virtual]

Override in subclass.

Implements [Digikam::DImgThreadedFilter](#).

#### 9.708.1.4 [parametersSuccessfullyRead\(\)](#)

[bool](#) [Digikam::IccTransformFilter::parametersSuccessfullyRead \( \)](#) const [override], [virtual]

When [readParameters\(\)](#) has been called, this method will return true if the call was successful, and false if not. If returning false, [readParametersError\(\)](#) will give an error message. The default implementation always returns success. You only need to reimplement when a filter is likely to fail in a different environment, e.g. depending on availability of installed files. These methods have an undefined return value if [readParameters\(\)](#) was not called previously.

Reimplemented from [Digikam::DImgThreadedFilter](#).

### 9.708.1.5 progressInfo()

```
void Digikam::IccTransformFilter::progressInfo (
    float progress ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::DImgLoaderObserver](#).

### 9.708.1.6 readParameters()

```
void Digikam::IccTransformFilter::readParameters (
    const FilterAction & action ) [override], [virtual]
```

Implements [Digikam::DImgThreadedFilter](#).

### 9.708.1.7 readParametersError()

```
QString Digikam::IccTransformFilter::readParametersError (
    const FilterAction & actionThatFailed ) const [override], [virtual]
```

Reimplemented from [Digikam::DImgThreadedFilter](#).

## 9.709 Digikam::Identity Class Reference

### Public Member Functions

- [Identity](#) ()  
*Wraps a face recognition [Identity](#).*
- [Identity](#) (const [Identity](#) &other)
- QString [attribute](#) (const QString &att) const  
*Attribute value accessor.*
- QMap< QString, QString > [attributesMap](#) () const  
*Attributes map accessor.*
- int [id](#) () const  
*Id value accessor.*
- bool [isNull](#) () const
- [Identity](#) & [operator=](#) (const [Identity](#) &other)
- bool [operator==](#) (const [Identity](#) &other) const
- void [setAttribute](#) (const QString &att, const QString &val)
- void [setAttributesMap](#) (const QMap< QString, QString > &attributes)
- void [setId](#) (int [id](#))

## 9.709.1 Constructor & Destructor Documentation

### 9.709.1.1 Identity()

```
Digikam::Identity::Identity ( )
```

An identity refers to a natural person. There is an internal id which is used the [FacesEngine](#) storage, and a number of attributes which map the identity to the outside. Prespecified attributes: "fullName" The full name as on the ID card, e.g. "Peter Brown" "name" The person's name without further specification, e.g. "Peter" or "Dad" "uuid" A UUID that is assigned to each new identity at creation.

For fullName and name, multiple values are allowed.

Attributes can be used to map an identity to other fields and services where natural persons play a role.

## 9.710 Digikam::IdentityProvider Class Reference

### Public Member Functions

- [Identity](#) **addIdentity** (const QMap< QString, QString > &attributes)  
*Adds a new identity with the specified attributes.*
- [Identity](#) **addIdentityDebug** (const QMap< QString, QString > &attributes)  
*This is the debug version of addIdentity, so the identity is only added to identityCache, but not into the recognition database.*
- int **addTraining** (const [Identity](#) &identity, const QString &hash, const cv::Mat &feature)  
*add the face features and hash to the recognition DB returns the ID of the new row*
- QList< [Identity](#) > **allIdentities** () const  
*Returns all identities known to the database.*
- void **clearAllTraining** ()  
*clears all identities and face training from the recognition DB*
- bool **clearTraining** (const QString &hash)  
*Deletes the training image for the given hash, leaving the identity as such in the database.*
- void **deleteIdentities** (QList< [Identity](#) > identitiesToBeDeleted)  
*Deletes a list of identities from the database.*
- void **deleteIdentity** (const [Identity](#) &identityToBeDeleted)  
*Deletes an identity from the database.*
- [Identity](#) **findIdentity** (const QMap< QString, QString > &attributes) const  
*Finds the identity matching the given attributes.*
- [Identity](#) **findIdentity** (const QString &attribute, const QString &value) const  
*Finds the first identity with matching attribute - value.*
- [Identity](#) **identity** (int id) const
- bool **integrityCheck** ()  
*Checks the integrity and returns true if everything is fine.*
- bool **isValidId** (int label) const  
*checks if the id exists in the recognition DB*
- void **vacuum** ()  
*Shrinks the database.*

### Static Public Member Functions

- static [IdentityProvider](#) \* **instance** ()

### Protected Member Functions

- bool **addIdentityFace** (const [Identity](#) &identity, QString &hash, cv::Mat embedding)
- bool **deleteIdentityFace** (const [Identity](#) &identity, QString &hash)
- cv::Ptr< cv::ml::TrainData > **getTrainingData** () const  
*Deletes a list of identities from the database.*
- bool **initialize** ()

### Friends

- class **FaceClassifier**
- class **Identity**
- class **IdentityProviderCreator**

## 9.710.1 Member Function Documentation

### 9.710.1.1 addIdentity()

```
Identity Digikam::IdentityProvider::addIdentity (
    const QMap< QString, QString > & attributes )
```

Please note that a UUID is automatically generated.

### 9.710.1.2 findIdentity() [1/2]

```
Identity Digikam::IdentityProvider::findIdentity (
    const QMap< QString, QString > & attributes ) const
```

Attributes are first checked with knowledge of their meaning. Secondly, all unknown attributes are used. Returns a null [Identity](#) if no match is possible or the map is empty.

### 9.710.1.3 findIdentity() [2/2]

```
Identity Digikam::IdentityProvider::findIdentity (
    const QString & attribute,
    const QString & value ) const
```

Returns a null identity if no match is found or attribute is empty.

## 9.711 Digikam::ImageChangeset Class Reference

### Public Member Functions

- [ImageChangeset](#) ()=default  
*An [ImageChangeset](#) covers adding or changing any properties of an image.*
- [ImageChangeset](#) (const QList< qlonglong > &ids, const [DatabaseFields::Set](#) &changes)
- [ImageChangeset](#) (qlonglong id, const [DatabaseFields::Set](#) &changes)
- [DatabaseFields::Set](#) **changes** () const
- bool **containsImage** (qlonglong id) const
- QList< qlonglong > **ids** () const
- [ImageChangeset](#) & **operator**<< (const QDBusArgument &argument)
- const [ImageChangeset](#) & **operator**>> (QDBusArgument &argument) const

### 9.711.1 Constructor & Destructor Documentation

#### 9.711.1.1 ImageChangeset()

```
Digikam::ImageChangeset::ImageChangeset ( ) [default]
```

It is described by a list of affected image ids, and a set of affected database fields. There is no guarantee that information in the database has actually been changed.

## 9.712 Digikam::ImageCommonContainer Class Reference

### Public Attributes

- int **colorDepth** = 0

- void **setCurveType** ([CurveType](#) type)
- void **setCurveType** (int channel, [CurveType](#) type)
- void **setCurveValue** (int channel, int bin, int val)
  - Methods to set manually the curves values.*
- void **setCurveValues** (int channel, const QPolygon &vals)
- void **unsetCurvePoint** (int channel, int point)

### Static Public Member Functions

- static QPoint **getDisabledValue** ()

### Static Public Attributes

- static const int **MULTIPLIER\_16BIT** = 255
  - Curve points have to multiplied with this value for 16 bit images.*
- static const int **NUM\_CHANNELS** = 5
  - Number of channels in a curve.*
- static const int **NUMBER\_OF\_POINTS** = 17
  - The max number of points contained in a curve.*

## 9.713.1 Member Enumeration Documentation

### 9.713.1.1 CurveType

enum [Digikam::ImageCurves::CurveType](#)

## Enumerator

CURVE_SMOOTH	Smooth curve type.
CURVE_FREE	Freehand curve type.

## 9.713.2 Member Function Documentation

### 9.713.2.1 channelToBinary()

```
QByteArray Digikam::ImageCurves::channelToBinary (
    int channel ) const
```

Binary format:

Note that 16bit free curves take a lot of memory (~85kB) while all other forms take less than 400 bytes.

Version 1 :16 Type 0,1,2 : 8 Bytes depth 1,2 : 8 reserved :32 count :32

Type 0 (linear curve): Type 1 (smooth curve): for (0...count) point.x :32 point.y :32 Type 2 (free curve): for (0...count) if (Bytes depth == 1) value : 8 else if (Bytes depth == 2) value :16

In Big Endian byte order. Data then converted to base64.

### 9.713.2.2 fillFromOtherCurves()

```
void Digikam::ImageCurves::fillFromOtherCurves (
    const ImageCurves *const otherCurves )
```

This ensures that 8 and 16 bit curves are properly converted.

#### Parameters

<i>otherCurves</i>	other curves object to adapt config from
--------------------	--

### 9.713.2.3 setChannelFromBinary()

```
bool Digikam::ImageCurves::setChannelFromBinary (
    int channel,
    const QByteArray & array )
```

The data is checked for validity, only on valid data true is returned. Note that the bytes depth (isSixteenBits()) of the encoded representation must match the depth of this curves object.

### 9.713.2.4 setContainer()

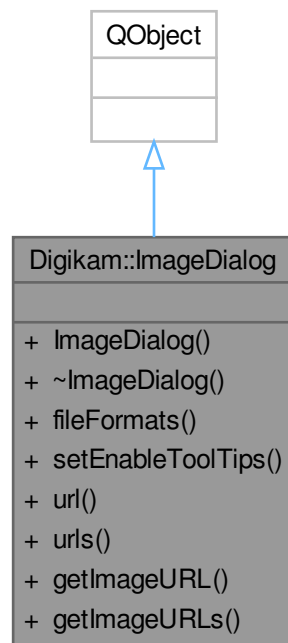

```
void Digikam::ImageCurves::setContainer (
    const CurvesContainer & container )
```

## Note

bits depth must match

## 9.714 Digikam::ImageDialog Class Reference

Inheritance diagram for Digikam::ImageDialog:

### Public Member Functions

- **ImageDialog** (`QWidget *const parent`, `const QUrl &url`, `bool singleSelect=false`, `const QString &caption=QString()`)

- QSize **originalSize** () const  
*Methods to get/set original image information.*
- void **paint** (QPaintDevice \*const device, const QRect &rect, QPainter \*const painter=nullptr)  
*Paint the current target preview image (or the preview image, if setPreview has not been called) on the given paint device.*
- [DImg](#) **preview** () const  
*Return a [DImg](#) object representing the preview image.*
- bool **previewHasAlpha** () const
- [DImg](#) \* **previewReference** ()  
*Return a pointer to the [DImg](#) object representing the preview image.*
- bool **previewSixteenBit** () const
- QSize **previewSize** () const  
*Methods to get/set preview image information.*
- [PreviewType](#) **previewType** () const
- [DImg](#) **selection** () const  
*Return a [DImg](#) object representing the current original image selection.*
- QRect **selectionRect** () const  
*Return current image selection position and size into original image coordinates.*
- void **setOriginal** (const QString &caller, const [FilterAction](#) &action, const [DImg](#) &img)  
*Replace the data of the original with the given image.*
- void **setOriginalIccProfile** (const [IccProfile](#) &profile)  
*Set the color profile of the original image.*
- void **setOriginalMetadata** (const [MetaEngineData](#) &meta)

- void `setPreview` (const `DImg` &img)  
*Replace the stored target preview with the given image.*
- void `setPreviewIccProfile` (const `IccProfile` &profile)  
*Set the color profile of the preview image.*
- `DImg` `setPreviewSize` (const `QSize` &size) const  
*Sets preview size and returns new preview as with `getPreview`.*
- void `setPreviewType` (`PreviewType` type=`FullImage`)  
*If `useSelection` is true, preview will be rendered using current selection in editor instead the full image.*
- void `setSelection` (const `QString` &caller, const `FilterAction` &action, const `DImg` &img)  
*Replace the data of the current original image selection with the given data.*

## 9.721.1 Member Enumeration Documentation

### 9.721.1.1 PreviewType

```
enum Digikam::ImageIface::PreviewType
```

Enumerator

FullImage	Preview will be rendered using full image.
ImageSelection	Preview will be rendered using current selection from editor canvas.

## 9.721.2 Constructor & Destructor Documentation

### 9.721.2.1 ImageIface()

```
Digikam::ImageIface::ImageIface (
    const QSize & size = QSize(0, 0) ) [explicit]
```

Size is the constrain dimension of preview. This can be null size.

## 9.721.3 Member Function Documentation

### 9.721.3.1 original()

```
DImg * Digikam::ImageIface::original ( ) const
```

This object may not be modified or stored. Make copies if you need.

### 9.721.3.2 paint()

```
void Digikam::ImageIface::paint (
    QPaintDevice *const device,
    const QRect & rect,
    QPainter *const painter = nullptr )
```

at x|y, with given maximum width and height taken from rectangle rect.

### 9.721.3.3 previewReference()

```
DImg * Digikam::ImageIface::previewReference ( )
```

This function is a backdoor for preview editing.

### 9.721.3.4 setOriginal()

```
void Digikam::ImageIface::setOriginal (
    const QString & caller,
    const FilterAction & action,
    const DImg & img )
```

The characteristics of the data must match the characteristics of the original image as returned by the original...() methods, The size of image can be changed. Caller is an i18n'ed string that will be shown as the undo/redo action name.

### 9.721.3.5 setPreview()

```
void Digikam::ImageIface::setPreview (
    const DImg & img )
```

The characteristics of the data must match the characteristics of the current as returned by the preview...() methods. The target preview image is used by the paint() and colorInfoFromTargetPreview() methods. The image returned by getPreview() is unaffected.

### 9.721.3.6 setPreviewSize()

```
DImg Digikam::ImageIface::setPreviewSize (
    const QSize & size ) const
```

The parameters are only hints, previewSize() may differ from size.

### 9.721.3.7 setPreviewType()

```
void Digikam::ImageIface::setPreviewType (
    PreviewType type = FullImage )
```

Default preview is FullImage.

### 9.721.3.8 setSelection()

```
void Digikam::ImageIface::setSelection (
    const QString & caller,
    const FilterAction & action,
    const DImg & img )
```

The characteristics of the data must match the characteristics of the current selection as returned by the selection←→Width(), selectionHeight(), originalSixteenBit() and originalHasAlpha() methods. Caller is an i18n'ed string that will be shown as the undo/redo action name.

## 9.722 Digikam::ImageLevels Class Reference

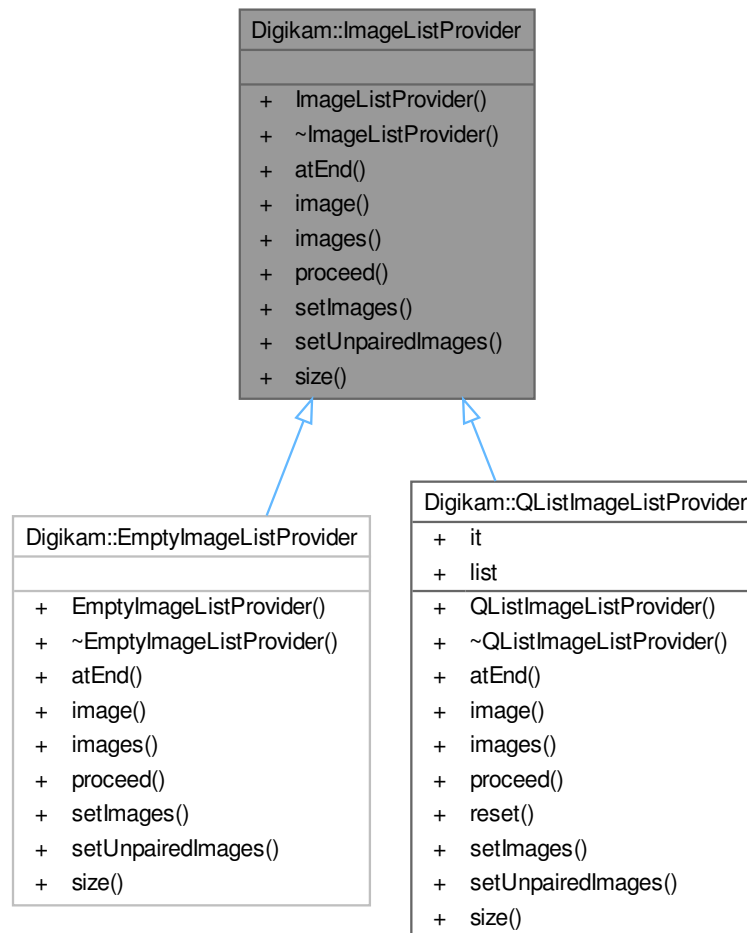

### Public Member Functions

- **ImageLevels** (bool sixteenBit)
- double **getLevelGammaValue** (int channel)
- int **getLevelHighInputValue** (int channel)
- int **getLevelHighOutputValue** (int channel)
- int **getLevelLowInputValue** (int channel)

- void [progressItemThumbnail](#) ([ProgressItem](#) \*item, const QPixmap &thumb)  
*Emitted when the thumbnail data must be set in item.*
- void [progressItemUsesBusyIndicator](#) ([ProgressItem](#) \*item, bool value)  
*Emitted when the busy indicator state of an item changes.*

### Protected Slots inherited from [Digikam::MaintenanceTool](#)

- virtual void **slotCancel** ()
- virtual void **slotDone** ()
- virtual void **slotStart** ()

## 9.732.1 Member Enumeration Documentation

### 9.732.1.1 QualityScanMode

```
enum Digikam::ImageQualitySorter::QualityScanMode
```

## Enumerator

AllItems	Clean all Pick Labels assignments and re-scan all items.
NonAssignedItems	Scan only items with no Pick Labels assigned.

## 9.732.2 Constructor & Destructor Documentation

### 9.732.2.1 ImageQualitySorter()

```
Digikam::ImageQualitySorter::ImageQualitySorter (
    QualityScanMode mode,
    const AlbumList & list = AlbumList(),
    const ImageQualityContainer & quality = ImageQualityContainer(),
    ProgressItem *const parent = nullptr ) [explicit]
```

If list is empty, whole Albums collection is processed.

## 9.732.3 Member Function Documentation

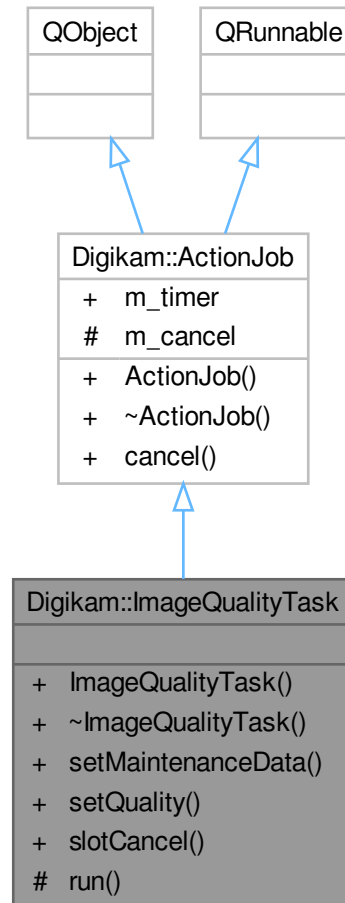

### 9.732.3.1 setUseMultiCoreCPU()

```
void Digikam::ImageQualitySorter::setUseMultiCoreCPU (
    bool ) [override], [virtual]
```

Reimplemented from [Digikam::MaintenanceTool](#).

## 9.733 Digikam::ImageQualityTask Class Reference

Inheritance diagram for Digikam::ImageQualityTask:

### Public Slots

- void **slotCancel** ()

### Public Slots inherited from [Digikam::ActionJob](#)

- void **cancel** ()  
*Call this method to cancel job.*

### Signals

- void **signalFinished** (const [ItemInfo](#) &, const QImage &, int)

## Signals inherited from [Digikam::ActionJob](#)

- void **signalDone** ()  
*Use this signal in your implementation to inform [ActionThreadBase](#) manager the job is done.*
- void **signalProgress** (int)  
*Use this signal in your implementation to inform [ActionThreadBase](#) manager the job progress.*
- void **signalStarted** ()  
*Use this signal in your implementation to inform [ActionThreadBase](#) manager that job is started.*

## Public Member Functions

- void **setMaintenanceData** ([MaintenanceData](#) \*const data=nullptr)
- void **setQuality** (const [ImageQualityContainer](#) &quality)

## Public Member Functions inherited from [Digikam::ActionJob](#)

- **ActionJob** (QObject \*const parent=nullptr)  
*Constructor which delegate deletion of QRunnable instance to [ActionThreadBase](#), not QThreadPool.*
- **~ActionJob** () override  
*Re-implement destructor in you implementation.*

## Protected Member Functions

- void **run** () override

## Additional Inherited Members

## Public Attributes inherited from [Digikam::ActionJob](#)

- QElapsedTimer **m\_timer**  
*Timer to determine the running time of the job.*

## Protected Attributes inherited from [Digikam::ActionJob](#)

- bool **m\_cancel** = false  
*You can use this boolean in your implementation to know if job must be canceled.*

## 9.734 Digikam::ImageQualityThread Class Reference

Inheritance diagram for Digikam::ImageQualityThread:

### Public Member Functions

- **ImageQualityThread** (`QObject *const parent`, `AbstractDetector *const detector`, `const cv::Mat &image`, `ImageQualityCalculator *const calculator`, `float weight_quality`)

## 9.737.1 Member Function Documentation

### 9.737.1.1 `getOriginalRegionImage()`

```
DImg Digikam::ImageRegionWidget::getOriginalRegionImage (
    bool useDownscaledImage = false ) const
```

Should be use to increase preview speed for the effects whose behaviour is a function of each pixel.

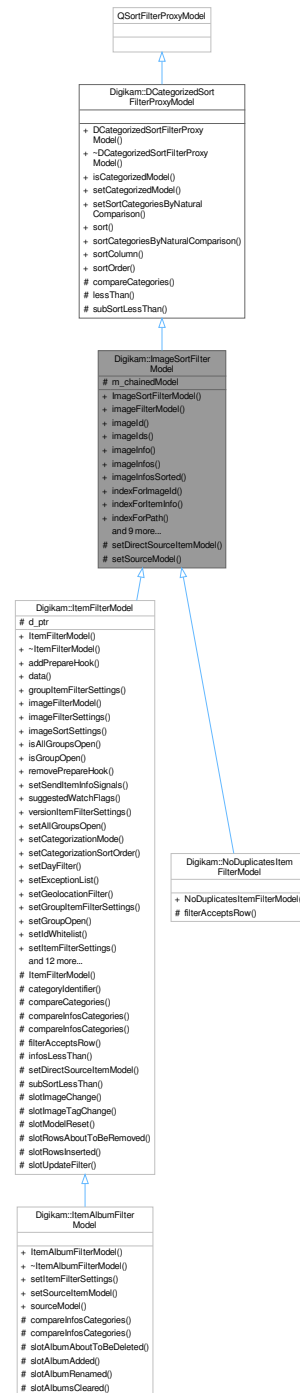

## 9.738 Digikam::ImageRelation Class Reference

### Public Attributes

- qlonglong **objectId** = 0
- qlonglong **subjectId** = 0
- DatabaseRelation::Type **type** = DatabaseRelation::UndefinedType

## 9.739 Digikam::ImageSortFilterModel Class Reference

Inheritance diagram for Digikam::ImageSortFilterModel:

### Public Member Functions

- **ImageSortFilterModel** (QObject \*const parent=nullptr)
- virtual **ItemFilterModel** \* **imageFilterModel** () const

Returns this, any chained [ItemFilterModel](#), or 0.

- qlonglong **imageId** (const QModelIndex &index) const
- QList< qlonglong > **imageIds** (const QList< QModelIndex > &indexes) const
- [ItemInfo](#) **imageInfo** (const QModelIndex &index) const
- QList< [ItemInfo](#) > **imageInfos** (const QList< QModelIndex > &indexes) const
- QList< [ItemInfo](#) > **imageInfosSorted** () const

Returns a list of all image infos, sorted according to this model.

- QModelIndex **indexForImageId** (qlonglong id) const
- QModelIndex **indexForItemInfo** (const [ItemInfo](#) &info) const
- QModelIndex **indexForPath** (const QString &filePath) const
- QModelIndex **mapFromDirectSourceToSourceItemModel** (const QModelIndex &sourceModel\_index) const
- QModelIndex **mapFromSourceItemModel** (const QModelIndex &imagemodel\_index) const
- QList< QModelIndex > **mapListFromSource** (const QList< QModelIndex > &sourceIndexes) const
- QList< QModelIndex > **mapListToSource** (const QList< QModelIndex > &indexes) const

Convenience methods mapped to [ItemModel](#).

- QModelIndex **mapToSourceItemModel** (const QModelIndex &index) const
- void **setSourceFilterModel** ([ImageSortFilterModel](#) \*const model)
- void **setSourceItemModel** ([ItemModel](#) \*const model)
- [ImageSortFilterModel](#) \* **sourceFilterModel** () const
- [ItemModel](#) \* **sourceItemModel** () const

## Public Member Functions inherited from [Digikam::DCategorizedSortFilterProxyModel](#)

- [DCategorizedSortFilterProxyModel](#) (QObject \*const parent=nullptr)
- bool **isCategorizedModel** () const
- void **setCategorizedModel** (bool categorizedModel)
- void **setSortCategoriesByNaturalComparison** (bool [sortCategoriesByNaturalComparison](#))
- void **sort** (int column, Qt::SortOrder order=Qt::AscendingOrder) override
- bool **sortCategoriesByNaturalComparison** () const
- int **sortColumn** () const
- Qt::SortOrder **sortOrder** () const

Enables or disables the categorization feature.

Set if the sorting using [CategorySortRole](#) will use a natural comparison in the case that strings were returned.

Overridden from [QSortFilterProxyModel](#).

## Protected Member Functions

- virtual void **setDirectSourceItemModel** ([ItemModel](#) \*const model)
- void **setSourceModel** ([QAbstractItemModel](#) \*const model) override

Reimplement if needed.

## Protected Member Functions inherited from [Digikam::DCategorizedSortFilterProxyModel](#)

- virtual int **compareCategories** (const QModelIndex &left, const QModelIndex &right) const
- bool **lessThan** (const QModelIndex &left, const QModelIndex &right) const override
- virtual bool **subSortLessThan** (const QModelIndex &left, const QModelIndex &right) const

This method compares the category of the *left* index with the category of the *right* index.

Overridden from [QSortFilterProxyModel](#).

This method has a similar purpose as [lessThan\(\)](#) has on [QSortFilterProxyModel](#).

**Protected Attributes**

- [ImageSortFilterModel](#) \* `m_chainedModel` = nullptr

**Additional Inherited Members****Public Types inherited from [Digikam::DCategorizedSortFilterProxyModel](#)**

- enum [AdditionalRoles](#) { [CategoryDisplayRole](#) = 0x17CE990A , [CategorySortRole](#) = 0x27857E60 }

**9.739.1 Member Function Documentation****9.739.1.1 imageFilterModel()**

```
ItemFilterModel * Digikam::ImageSortFilterModel::imageFilterModel ( ) const [virtual]
```

Reimplemented in [Digikam::ItemFilterModel](#).

**9.739.1.2 imageInfosSorted()**

```
QList< ItemInfo > Digikam::ImageSortFilterModel::imageInfosSorted ( ) const
```

If you do not need a sorted list, use [ItemModel](#)'s `imageInfos()` method.

**9.739.1.3 mapListToSource()**

```
QList< QModelIndex > Digikam::ImageSortFilterModel::mapListToSource (
    const QList< QModelIndex > & indexes ) const
```

Mentioned indexes returned come from the source image model.

**9.739.1.4 setDirectSourceItemModel()**

```
void Digikam::ImageSortFilterModel::setDirectSourceItemModel (
    ItemModel *const model ) [protected], [virtual]
```

Called only when model shall be set as (direct) sourceModel.

Reimplemented in [Digikam::ItemFilterModel](#).

**9.739.1.5 setSourceModel()**

```
void Digikam::ImageSortFilterModel::setSourceModel (
    QAbstractItemModel *const model ) [override], [protected]
```

**Note**

made protected

## 9.740 Digikam::ImageTagChangeset Class Reference

### Public Types

- enum [Operation](#) {  
**Unknown** , **Added** , **Moved** , **Removed** ,  
**RemovedAll** , **PropertiesChanged** }

An [ImageTagChangeset](#) covers adding and removing the association of a tag with an image.

### Public Member Functions

- **ImageTagChangeset** (const QList< qlonglong > &ids, const QList< int > &tags, [Operation](#) operation)
- **ImageTagChangeset** (qlonglong id, const QList< int > &tags, [Operation](#) operation)
- **ImageTagChangeset** (qlonglong id, int tag, [Operation](#) operation)
- bool **containsImage** (qlonglong id) const
- bool **containsTag** (int id) const
- QList< qlonglong > **ids** () const
- [Operation](#) **operation** () const
- [ImageTagChangeset](#) & **operator<<** (const [ImageTagChangeset](#) &other)  
*Combines two ImageTagChangesets.*
- [ImageTagChangeset](#) & **operator<<** (const QDBusArgument &argument)
- const [ImageTagChangeset](#) & **operator>>** (QDBusArgument &argument) const
- bool **propertiesWereChanged** () const
- QList< int > **tags** () const
- bool **tagsWereAdded** () const
- bool **tagsWereRemoved** () const

### 9.740.1 Member Enumeration Documentation

#### 9.740.1.1 Operation

```
enum Digikam::ImageTagChangeset::Operation
```

It is described by a list of affected image ids, a list of affected tags, and an operation. There is no guarantee that information in the database has actually been changed.

### 9.740.2 Member Function Documentation

#### 9.740.2.1 operator<<()

```
ImageTagChangeset & Digikam::ImageTagChangeset::operator<< (  

    const ImageTagChangeset & other )
```

The operations shall not differ between the two sets; the operation is set to Unknown if it differs. This is especially not suitable for RemovedAll changesets.

### Protected Attributes inherited from [Digikam::DXmlGuiWindow](#)

- [DLogoAction](#) \* `m_animLogo` = nullptr

## 9.743.1 Member Function Documentation

### 9.743.1.1 infoIface()

```
DInfoInterface * Digikam::ImageWindow::infoIface (
    DPluginAction *const ac ) [override], [virtual]
```

Implements [Digikam::DXmlGuiWindow](#).

### 9.743.1.2 versionManager()

```
VersionManager * Digikam::ImageWindow::versionManager ( ) const [override], [virtual]
```

Reimplemented from [Digikam::EditorWindow](#).

## 9.744 Digikam::ImageZoomSettings Class Reference

### Public Types

- enum **FitToSizeMode** { **AlwaysFit** , **OnlyScaleDown** }

### Public Member Functions

- **ImageZoomSettings** (const QSize &imageSize, const QSize &originalSize=QSize())
- void **fitToSize** (const QSizeF &frameSize, FitToSizeMode=AlwaysFit)
 

*Sets the current zoom factor to the factor needed to fit the current (original) image size into the given view size.*
- double **fitToSizeZoomFactor** (const QSizeF &frameSize, FitToSizeMode=AlwaysFit) const
 

*Returns the zoom factor that would be used by [fitToSize\(\)](#) called with the given frameSize.*
- QSizeF **imageSize** () const
 

*Returns the (available) image size.*
- bool **isFitToSize** (const QSizeF &frameSize) const
- QPointF **mapImageToZoom** (const QPointF &imagePoint) const
 

*For a given point (in (0,0), [imageSize\(\)](#)) returns the corresponding point in (0,0),[zoomedSize\(\)](#).*
- QRectF **mapImageToZoom** (const QRectF &imagePoint) const
 

*For a given rect contained in ((0,0), [imageSize\(\)](#)) returns the corresponding rectangle in (0,0),[zoomedSize\(\)](#).*
- QPointF **mapZoomToImage** (const QPointF &zoomedPoint) const
 

*For a given point (in (0,0), [zoomedSize\(\)](#)) returns the corresponding point in (0,0),[imageSize\(\)](#).*
- QRectF **mapZoomToImage** (const QRectF &imageRect) const
- QSizeF **originalImageSize** () const
 

*Return the original image size.*
- double **realZoomFactor** () const
 

*Return the real zoom factor dependent on device pixel ratio.*
- void **setDisplayWidget** (QWidget \*const widget)
 

*Set the graphics view widget to track the device pixel ratio.*
- void **setImageSize** (const QSize &size, const QSize &originalSize=QSize())
 

*Sets the size of the (available) image data.*
- void **setZoomFactor** (double zoom)
 

*Sets the current zoom factor, relative to (original) size.*

- double **snappedZoomFactor** (double newZoom, const QSizeF &frameSize) const  
*When setting a new zoom factor (absolute value), the new value may be very close to a special value.*
- double **snappedZoomStep** (double nextZoom, const QSizeF &frameSize) const  
*When changing the zoom from current zoom to given nextZoom, sometimes a special value may be crossed, and this could then be used instead of nextZoom.*
- QRectF **sourceRect** (const QRectF &imageRect) const  
*For a given rectangle contained in ((0,0), zoomedSize()) returns the corresponding rectangle in (0,0),imageSize().*
- QSizeF **zoomedSize** () const  
*Return the size of the image when the current zoom factor is applied.*
- double **zoomFactor** () const  
*Return the currently set zoom factor.*

### Static Public Member Functions

- static bool **getImageSmoothScale** ()
- static void **setImageSmoothScale** (bool enable)  
*Static functions to define the smooth scaling of the image.*

### Protected Attributes

- QWidget \* **m\_displayWidget** = nullptr
- QSizeF **m\_size**
- double **m\_zoom** = 1.0
- double **m\_zoomConst** = 1.0

## 9.744.1 Member Function Documentation

### 9.744.1.1 fitToSize()

```
void Digikam::ImageZoomSettings::fitToSize (
    const QSizeF & frameSize,
    FitToSizeMode mode = AlwaysFit )
```

Aspect ratio will be respected, that means the frameSize may not be completely filled in one dimension, and [zoomedSize\(\)](#) can differ from frameSize in one dimension.

### 9.744.1.2 originalImageSize()

```
QSizeF Digikam::ImageZoomSettings::originalImageSize ( ) const
```

Can be identical to size().

### 9.744.1.3 setImageSize()

```
void Digikam::ImageZoomSettings::setImageSize (
    const QSize & size,
    const QSize & originalSize = QSize() )
```

Optionally, you can specify an original size, if the available image data is a scaled-down version. In this case, zoom factors will refer to the original size. The zoom factor is unchanged, you need to call fitToSize again.

#### 9.744.1.4 snappedZoomFactor()

```
double Digikam::ImageZoomSettings::snappedZoomFactor (
    double newZoom,
    const QSizeF & frameSize ) const
```

Returns this special value if this is the case, returns *newZoom* if not applicable.

#### 9.744.1.5 snappedZoomStep()

```
double Digikam::ImageZoomSettings::snappedZoomStep (
    double nextZoom,
    const QSizeF & frameSize ) const
```

Returns this special zoom, or *nextZoom* if not applicable.

#### 9.744.1.6 zoomedSize()

```
QSizeF Digikam::ImageZoomSettings::zoomedSize ( ) const
```

This is the size the image should be displayed at.

## 9.745 Digikam::ImportCategorizedView Class Reference

Inheritance diagram for Digikam::ImportCategorizedView:

### Public Slots

- void **hintAt** (const [CamItemInfo](#) &info)

*Does something to gain attention for info, but not changing current selection.*

- void **setCurrentInfo** (const [CamItemInfo](#) &info)  
*Set as current item the item identified by the [CamItemInfo](#).*
- void **setCurrentUrl** (const QUrl &url)  
*Set as current item the item identified by its file url.*
- void **setCurrentWhenAvailable** (qulonglong camItemId)  
*Scroll the view to the given item when it becomes available.*
- void **setSelectedCamItemInfos** (const QList< [CamItemInfo](#) > &infos)  
*Set selected items.*
- void **setSelectedUrls** (const QList< QUrl > &urlList)  
*Set selected items identified by their file urls.*
- void **setThumbnailSize** (int size)

### Public Slots inherited from [Digikam::ItemViewCategorized](#)

- void **copy** () override
- void **cut** () override
- void **hideIndexNotification** ()
- void **paste** () override
- void **showIndexNotification** (const QModelIndex &index, const QString &message)

### Public Slots inherited from [Digikam::DCategorizedView](#)

- void **reset** () override

### Signals

- void **camItemInfoActivated** (const [CamItemInfo](#) &info)  
*Emitted when the given [CamItemInfo](#) is activated.*
- void **currentChanged** (const [CamItemInfo](#) &info)
- void **deselected** (const QList< [CamItemInfo](#) > &nowDeselectedInfos)  
*Emitted when items are deselected.*
- void **modelChanged** ()  
*Emitted when a new model is set.*
- void **selected** (const QList< [CamItemInfo](#) > &newSelectedInfos)  
*Emitted when new items are selected.*

### Signals inherited from [Digikam::ItemViewCategorized](#)

- void **clicked** (const QMouseEvent \*e, const QModelIndex &index)  
*For overlays: Like the respective parent class signals, but with additional info.*
- void **entered** (const QMouseEvent \*e, const QModelIndex &index)
- void **keyPressed** (QKeyEvent \*e)  
*Remember you may want to check if the event is accepted or ignored.*
- void **selectionChanged** ()  
*Emitted when any selection change occurs.*
- void **selectionCleared** ()  
*Emitted when the selection is completely cleared.*
- void **viewportClicked** (const QMouseEvent \*e)  
*While [clicked\(\)](#) is emitted with a valid index, this corresponds to clicking on empty space.*
- void **zoomInStep** ()
- void **zoomOutStep** ()

## Public Member Functions

- **ImportCategorizedView** (QWidget \*const parent=nullptr)
- void **addOverlay** (ItemDelegateOverlay \*overlay, ImportDelegate \*delegate=nullptr)
  - Add and remove an overlay.*
- void **addSelectionOverlay** (ImportDelegate \*delegate=nullptr)
- QList< CamItemInfo > **camItemInfos** () const
- CamItemInfo **currentInfo** () const
- QUrl **currentUrl** () const
- ImportDelegate \* **delegate** () const
- QItemSelectionModel \* **getSelectionModel** () const
- ImportFilterModel \* **importFilterModel** () const
  - Returns any ImportFilterModel in chain.*
- ImportItemModel \* **importItemModel** () const
- ImportSortFilterModel \* **importSortFilterModel** () const
- ImportThumbnailModel \* **importThumbnailModel** () const
  - Returns 0 if the ImportItemModel is not an ImportThumbnailModel.*
- CamItemInfo **nextInfo** (const CamItemInfo &info)
- CamItemInfo **nextInOrder** (const CamItemInfo &startingPoint, int nth)
  - Returns the n-th info after the given one.*
- CamItemInfo **previousInfo** (const CamItemInfo &info)
- void **removeOverlay** (ItemDelegateOverlay \*overlay)
- QList< CamItemInfo > **selectedCamItemInfos** () const
- QList< CamItemInfo > **selectedCamItemInfosCurrentFirst** () const
- QList< QUrl > **selectedUrls** () const
- void **setModels** (ImportItemModel \*model, ImportSortFilterModel \*filterModel)
- virtual void **setThumbnailSize** (const ThumbnailSize &size)
- ThumbnailSize **thumbnailSize** () const
- void **toIndex** (const QUrl &url)
  - Selects the index as current and scrolls to it.*
- QList< QUrl > **urls** () const

## Public Member Functions inherited from Digikam::ItemViewCategorized

- **ItemViewCategorized** (QWidget \*const parent=nullptr)
- void **awayFromSelection** ()
- DItemDelegate \* **delegate** () const
- void **invertSelection** ()
- bool **isToolTipEnabled** () const
- int **numberOfSelectedIndexes** () const
- void **scrollTo** (const QModelIndex &index, ScrollHint hint=EnsureVisible) override
- void **scrollToRelaxed** (const QModelIndex &index, ScrollHint hint=EnsureVisible)
  - Like scrollTo, but only scrolls if the index is not visible, regardless of hint.*
- void **setInitialSelectedItem** (bool enabled)
  - Ensure a initial selected item.*
- void **setScrollCurrentToCenter** (bool enabled)
  - Scroll automatically the current index to center of the view.*
- void **setScrollStepGranularity** (int factor)
  - Determine a step size for scrolling: The larger this number, the smaller and more precise is the scrolling.*
- void **setSelectedIndexes** (const QList< QModelIndex > &indexes)
- void **setSpacing** (int spacing)
  - Sets the spacing.*

- void **setToolTipEnabled** (bool enabled)
- void **setUsePointingHandCursor** (bool useCursor)  
*Set if the PointingHand Cursor should be shown over the activation area.*
- void **toFirstIndex** ()  
*Selects the index as current and scrolls to it.*
- void **toIndex** (const QModelIndex &index)
- void **toLastIndex** ()
- void **toNextIndex** ()
- void **toPreviousIndex** ()

## Public Member Functions inherited from Digikam::DCategorizedView

- **DCategorizedView** (QWidget \*const parent=nullptr)
- virtual QModelIndexList **categorizedIndexesIn** (const QRect &rect) const  
*This method will return all indexes whose visual rect intersects rect.*
- virtual QModelIndex **categoryAt** (const QPoint &point) const  
*This method will return the first index of the category in the region of which point is found.*
- **DCategoryDrawer** \* **categoryDrawer** () const
- virtual QItemSelectionRange **categoryRange** (const QModelIndex &index) const  
*This method returns the range of indexes contained in the category in which index is sorted.*
- virtual QRect **categoryVisualRect** (const QModelIndex &index) const  
*This method will return the visual rect of the header of the category in which index is sorted.*
- QModelIndex **indexAt** (const QPoint &point) const override
- void **setCategoryDrawer** (DCategoryDrawer \*categoryDrawer)
- void **setDrawDraggedItems** (bool drawDraggedItems)  
*Switch on drawing of dragged items.*
- void **setGridSize** (const QSize &size)
- void **setModel** (QAbstractItemModel \*model) override
- QRect **visualRect** (const QModelIndex &index) const override

## Public Member Functions inherited from Digikam::DragDropViewImplementation

- virtual void **copy** ()
- virtual void **cut** ()
- virtual void **paste** ()

## Protected Slots

- void **slotCamItemInfosAdded** ()

## Protected Slots inherited from Digikam::ItemViewCategorized

- void **layoutAboutToBeChanged** ()
- void **layoutWasChanged** ()
- void **slotActivated** (const QModelIndex &index)
- void **slotClicked** (const QModelIndex &index)
- void **slotEntered** (const QModelIndex &index)
- virtual void **slotSetupChanged** ()
- virtual void **slotThemeChanged** ()

## Protected Slots inherited from [Digikam::DCategorizedView](#)

- void **currentChanged** (const QModelIndex &current, const QModelIndex &previous) override
- void **rowsInserted** (const QModelIndex &parent, int start, int end) override
- virtual void **rowsInsertedArtificial** (const QModelIndex &parent, int start, int end)
- virtual void **slotLayoutChanged** ()
- void **updateGeometries** () override

## Protected Member Functions

- virtual void **activated** (const [CamItemInfo](#) &info, Qt::KeyboardModifiers modifiers)
  - Reimplement these in a subclass.*
- void **currentChanged** (const QModelIndex &index, const QModelIndex &previous) override
- [AbstractItemDragDropHandler](#) \* **dragDropHandler** () const override
  - You need to implement these three methods Returns the drag drop handler.*
- QSortFilterProxyModel \* **filterModel** () const override
  - reimplemented from parent class*
- void **indexActivated** (const QModelIndex &index, Qt::KeyboardModifiers modifiers) override
- QModelIndex **nextIndexHint** (const QModelIndex &indexToAnchor, const QItemSelectionRange &removed) const override
  - Assuming the given indexes would be removed (hypothetically!), return the index to be selected instead, starting from anchor.*
- void **paintEvent** (QPaintEvent \*e) override
- void **selectionChanged** (const QItemSelection &, const QItemSelection &) override
- void **setItemDelegate** ([ImportDelegate](#) \*delegate)
- void **showContextMenuOnIndex** (QContextMenuEvent \*event, const QModelIndex &index) override
  - Reimplement these in a subclass.*
- virtual void **showContextMenuOnInfo** (QContextMenuEvent \*event, const [CamItemInfo](#) &info)
- void **updateGeometries** () override

## Protected Member Functions inherited from [Digikam::ItemViewCategorized](#)

- void **contextMenuEvent** (QContextMenuEvent \*event) override
  - reimplemented from parent class*
- bool **decodelsCutSelection** (const QMimeData \*mimeData)
- void **encodelsCutSelection** (QMimeData \*mime, bool isCutSelection)
- QModelIndex **indexForCategoryAt** (const QPoint &pos) const
  - Returns an index that is representative for the category at position pos.*
- void **keyPressEvent** (QKeyEvent \*event) override
- void **leaveEvent** (QEvent \*event) override
- QModelIndex **mapIndexForDragDrop** (const QModelIndex &index) const override
  - Note: pure virtual [dragDropHandler\(\)](#) still open from [DragDropViewImplementation](#).*
- void **mouseMoveEvent** (QMouseEvent \*event) override
- void **mousePressEvent** (QMouseEvent \*event) override
- void **mouseReleaseEvent** (QMouseEvent \*event) override
- QModelIndex **moveCursor** (CursorAction cursorAction, Qt::KeyboardModifiers modifiers) override
- QPixmap **pixmapForDrag** (const QList< QModelIndex > &indexes) const override
  - Creates a pixmap for dragging the given indexes.*
- void **reset** () override
- void **resizeEvent** (QResizeEvent \*e) override
- void **rowsAboutToBeRemoved** (const QModelIndex &parent, int start, int end) override
- void **rowsInserted** (const QModelIndex &parent, int start, int end) override

- void **rowsRemoved** (const QModelIndex &parent, int start, int end) override
- void **selectionChanged** (const QItemSelection &, const QItemSelection &) override
- void **setItemDelegate** (DItemDelegate \*delegate)
- void **setToolTip** (ItemViewToolTip \*tip)
- virtual void **showContextMenu** (QContextMenuEvent \*event)
- virtual bool **showToolTip** (const QModelIndex &index, QStyleOptionViewItem &option, QHelpEvent \*e=nullptr)
  - Provides default behavior, can reimplement in a subclass.*
- void **updateDelegateSizes** ()
- void **userInteraction** ()
- bool **viewportEvent** (QEvent \*event) override
- void **wheelEvent** (QWheelEvent \*event) override

### Protected Member Functions inherited from Digikam::DCategorizedView

- void **dragLeaveEvent** (QDragLeaveEvent \*event) override
- void **dragMoveEvent** (QDragMoveEvent \*event) override
- void **dropEvent** (QDropEvent \*event) override
- void **leaveEvent** (QEvent \*event) override
- void **mouseMoveEvent** (QMouseEvent \*event) override
- void **mousePressEvent** (QMouseEvent \*event) override
- void **mouseReleaseEvent** (QMouseEvent \*event) override
- QModelIndex **moveCursor** (CursorAction cursorAction, Qt::KeyboardModifiers modifiers) override
- void **paintEvent** (QPaintEvent \*event) override
- void **resizeEvent** (QResizeEvent \*event) override
- void **setSelection** (const QRect &rect, QItemSelectionModel::SelectionFlags flags) override
- void **startDrag** (Qt::DropActions supportedActions) override

### Protected Member Functions inherited from Digikam::DragDropViewImplementation

- virtual QAbstractItemView \* **asView** ()=0
  - This one is implemented by DECLARE\_VIEW\_DRAG\_DROP\_METHODS.*
- bool **decodelsCutSelection** (const QMimeData \*mimeData)
- void **dragEnterEvent** (QDragEnterEvent \*event)
  - Implements the relevant QAbstractItemView methods for drag and drop.*
- void **dragMoveEvent** (QDragMoveEvent \*e)
- void **dropEvent** (QDropEvent \*e)
- void **encodelsCutSelection** (QMimeData \*mime, bool isCutSelection)
- void **startDrag** (Qt::DropActions supportedActions)

## 9.745.1 Member Function Documentation

### 9.745.1.1 activated()

```
void Digikam::ImportCategorizedView::activated (
    const CamItemInfo & info,
    Qt::KeyboardModifiers modifiers ) [protected], [virtual]
```

Reimplemented in [Digikam::ImportIconView](#).

### 9.745.1.2 addOverlay()

```
void Digikam::ImportCategorizedView::addOverlay (
    ItemDelegateOverlay * overlay,
    ImportDelegate * delegate = nullptr )
```

It will as well be removed automatically when destroyed. Unless you pass a different delegate, the current delegate will be used.

### 9.745.1.3 camItemInfoActivated

```
void Digikam::ImportCategorizedView::camItemInfoActivated (
    const CamItemInfo & info ) [signal]
```

Info is never null.

### 9.745.1.4 deselected

```
void Digikam::ImportCategorizedView::deselected (
    const QList< CamItemInfo > & nowDeselectedInfos ) [signal]
```

There may be other selected infos left. This signal is not emitted when the model is reset; then only selectionCleared is emitted.

### 9.745.1.5 dragDropHandler()

```
AbstractItemDragDropHandler * Digikam::ImportCategorizedView::dragDropHandler ( ) const [override],
[protected], [virtual]
```

Implements [Digikam::DragDropViewImplementation](#).

### 9.745.1.6 filterModel()

```
QSortFilterProxyModel * Digikam::ImportCategorizedView::filterModel ( ) const [override],
[protected], [virtual]
```

Implements [Digikam::ItemViewCategorized](#).

### 9.745.1.7 importFilterModel()

```
ImportFilterModel * Digikam::ImportCategorizedView::importFilterModel ( ) const
```

May not be sourceModel()

### 9.745.1.8 indexActivated()

```
void Digikam::ImportCategorizedView::indexActivated (
    const QModelIndex & index,
    Qt::KeyboardModifiers modifiers ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemViewCategorized](#).

### 9.745.1.9 nextIndexHint()

```
QModelIndex Digikam::ImportCategorizedView::nextIndexHint (
    const QModelIndex & indexToAnchor,
    const QItemSelectionRange & removed ) const [override], [protected], [virtual]
```

The default implementation returns the next remaining sibling.

Reimplemented from [Digikam::ItemViewCategorized](#).

### 9.745.1.10 nextInOrder()

```
CamItemInfo Digikam::ImportCategorizedView::nextInOrder (
    const CamItemInfo & startingPoint,
    int nth )
```

Specifically, return the previous info for  $nth = -1$  and the next info for  $n = 1$ . Returns a null info if either *startingPoint* or the *nth* info are not contained in the model

### 9.745.1.11 selected

```
void Digikam::ImportCategorizedView::selected (
    const QList< CamItemInfo > & newSelectedInfos ) [signal]
```

The parameter includes only the newly selected infos, there may be other already selected infos.

### 9.745.1.12 showContextMenuOnIndex()

```
void Digikam::ImportCategorizedView::showContextMenuOnIndex (
    QContextMenuEvent * event,
    const QModelIndex & index ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemViewCategorized](#).

## 9.746 Digikam::ImportCategoryDrawer Class Reference

Inheritance diagram for Digikam::ImportCategoryDrawer:

### Public Member Functions

- **ImportCategoryDrawer** ([ImportCategorizedView](#) \*const parent)
- int [categoryHeight](#) (const [QModelIndex](#) &index, const [QStyleOption](#) &option) const override

- void [drawCategory](#) (const QModelIndex &index, int sortRole, const QStyleOption &option, QPainter \*painter) const override  
*This method purpose is to draw a category represented by the given.*
- void [invalidatePaintingCache](#) ()
- virtual int [maximumHeight](#) () const
- void [setDefaultViewOptions](#) (const QStyleOptionViewItem &option)
- void [setLowerSpacing](#) (int spacing)

## Public Member Functions inherited from Digikam::DCategoryDrawer

- [DCategoryDrawer](#) ([DCategorizedView](#) \*const view)  
*Construct a category drawer for a given view.*
- virtual int [leftMargin](#) () const
- virtual int [rightMargin](#) () const
- [DCategorizedView](#) \* view () const

## Additional Inherited Members

## Signals inherited from Digikam::DCategoryDrawer

- void [actionRequested](#) (int action, const QModelIndex &index)  
*Emit this signal on your subclass implementation to notify that something happened.*
- void [collapseOrExpandClicked](#) (const QModelIndex &index)  
*This signal becomes emitted when collapse or expand has been clicked.*

## Protected Member Functions inherited from Digikam::DCategoryDrawer

- virtual void [mouseButtonDoubleClicked](#) (const QModelIndex &index, const QRect &blockRect, QMouseEvent \*event)  
*Method called when the mouse button has been double clicked.*
- virtual void [mouseButtonPressed](#) (const QModelIndex &index, const QRect &blockRect, QMouseEvent \*event)  
*Method called when the mouse button has been pressed.*
- virtual void [mouseButtonReleased](#) (const QModelIndex &index, const QRect &blockRect, QMouseEvent \*event)  
*Method called when the mouse button has been released.*
- virtual void [mouseLeft](#) (const QModelIndex &index, const QRect &blockRect)  
*Method called when the mouse button has left this block.*
- virtual void [mouseMoved](#) (const QModelIndex &index, const QRect &blockRect, QMouseEvent \*event)  
*Method called when the mouse has been moved.*

## 9.746.1 Member Function Documentation

### 9.746.1.1 categoryHeight()

```
int Digikam::ImportCategoryDrawer::categoryHeight (
    const QModelIndex & index,
    const QStyleOption & option ) const [override], [virtual]
```

#### Returns

The category height for the category represented by index `index` with style options `option`.

Reimplemented from [Digikam::DCategoryDrawer](#).

### 9.746.1.2 drawCategory()

```
void Digikam::ImportCategoryDrawer::drawCategory (
    const QModelIndex & index,
    int sortRole,
    const QStyleOption & option,
    QPainter * painter ) const [override], [virtual]
```

#### Parameters

<i>index</i>	with the given
<i>sortRole</i>	sorting role
<i>option</i>	painter style options
<i>painter</i>	painter instance

#### Note

This method will be called one time per category, always with the first element in that category

Reimplemented from [Digikam::DCategoryDrawer](#).

## 9.747 Digikam::ImportContextMenuHelper Class Reference

Inheritance diagram for Digikam::ImportContextMenuHelper:

### Public Types

- typedef const QList< qlonglong > `itemIds`

### Signals

- void `signalAddNewTagFromABCMenu` (const QString &)
- void `signalAssignColorLabel` (int)
- void `signalAssignPickLabel` (int)
- void `signalAssignRating` (int)

### Public Member Functions

- [ImportContextMenuHelper](#) (QMenu \*const parent, KActionCollection \*const actionCollection=nullptr)  
*Constructs the helper class.*
- void [addAction](#) (const QString &name, bool addDisabled=false)

- Add an action from the actionCollection.*

  - void [addAction](#) (QAction \*action, bool addDisabled=false)

*Add a temporary action.*

  - void [addAction](#) (QAction \*action, QObject \*recv, const char \*slot, bool addDisabled=false)

*Add a temporary action and assign it to a custom slot.*

  - void [addAssignTagsMenu](#) (itemIds &ids)

*Add actions to add, remove or edit a tag.*

  - void **addGroupActions** (itemIds &ids)
  - void [addGroupMenu](#) (itemIds &ids)

*Add a "Group" menu.*

  - void [addLabelsAction](#) ()

*Add "Pick/Color/Rating Labels" action.*

  - void [addRemoveTagsMenu](#) (itemIds &ids)

*Add "Remove Tags" menu.*

  - void [addRotateMenu](#) (itemIds &ids)

*Add a menu to rotate item.*

  - void **addSeparator** ()

*Add a separator to the context menu.*

  - void [addServicesMenu](#) (const QList< QUrl > &selectedItems)

*Add the services menu to the menu.*

  - void [addSubMenu](#) (QMenu \*subMenu)

*Add a submenu to the parent context menu.*

  - QAction \* [exec](#) (const QPoint &pos, QAction \*at=nullptr)

*Execute the registered parent menu and evaluate the triggered actions.*

  - void [setImportFilterModel](#) ([ImportFilterModel](#) \*model)

*Set a filter model.*

## 9.747.1 Constructor & Destructor Documentation

### 9.747.1.1 ImportContextMenuHelper()

```
Digikam::ImportContextMenuHelper::ImportContextMenuHelper (
    QMenu *const parent,
    QActionCollection *const actionCollection = nullptr ) [explicit]
```

#### Parameters

<i>parent</i>	the menu the helper class is linked to
<i>actionCollection</i>	the actionCollection that should be used. If not set, the standard action from <a href="#">DigikamApp</a> is used

## 9.747.2 Member Function Documentation

### 9.747.2.1 addAction() [1/3]

```
void Digikam::ImportContextMenuHelper::addAction (
    const QString & name,
    bool addDisabled = false )
```

This method adds actions from the `actionCollection`. The `actionCollection` can be set in the constructor of the `ImportContextMenuHelper` class.

#### Parameters

<i>name</i>	the name of the action in the <code>actionCollection</code>
<i>addDisabled</i>	if set, disabled actions are added to the menu

#### 9.747.2.2 addAction() [2/3]

```
void Digikam::ImportContextMenuHelper::addAction (
    QAction * action,
    bool addDisabled = false )
```

Sometimes it is necessary to define actions that only exist in the current context menu content. Use this method to add such an action.

#### Parameters

<i>action</i>	the action to add
<i>addDisabled</i>	if set, disabled actions are added to the menu

#### 9.747.2.3 addAction() [3/3]

```
void Digikam::ImportContextMenuHelper::addAction (
    QAction * action,
    QObject * recv,
    const char * slot,
    bool addDisabled = false )
```

Use this method if you want to add a temporary action and immediately connect it to the receiving slot.

#### Parameters

<i>action</i>	the action to add
<i>recv</i>	the receiver of the triggered action
<i>slot</i>	the slot to connect the triggered action to
<i>addDisabled</i>	if set, disabled actions are added to the menu

#### 9.747.2.4 addAssignTagsMenu()

```
void Digikam::ImportContextMenuHelper::addAssignTagsMenu (
    itemIds & ids )
```

The tag modification helper is used to execute the action. You must set the parent tag to use on modification helper. Add "Assign Tags" menu.

This menu will provide a list of all tags available so that they can be assigned to the current selected items.

To make this menu work, you need to run [exec\(\)](#) from this class, otherwise the signals are not emitted and you will not be able to react on triggered actions from this menu. Make sure to connect the signals to the appropriate slots in the context menu handling method.

#### Parameters

<i>ids</i>	the selected items
------------	--------------------

#### See also

[exec\(\)](#)  
[signalAssignTag\(\)](#)

#### 9.747.2.5 addGroupMenu()

```
void Digikam::ImportContextMenuHelper::addGroupMenu (
    itemIds & ids )
```

This menu will provide actions open, close, add to, remove from, or split a group.

`addGroupActions` will add the actions as a flat list, not in a submenu. Note: Call `setItemFilterModel` before to have Open/Close group actions.

#### 9.747.2.6 addLabelsAction()

```
void Digikam::ImportContextMenuHelper::addLabelsAction ( )
```

This action will provide methods to assign pick/color/rating labels to the currently selected items.

To make this menu work, you need to run [exec\(\)](#) from this class, otherwise the signals are not emitted and you will not be able to react on triggered actions from this menu. Make sure to connect the signals to the appropriate slots in the context menu handling method.

#### See also

[exec\(\)](#)  
[signalAssignPickLabel\(\)](#)  
[signalAssignColorLabel\(\)](#)  
[signalAssignRating\(\)](#)

#### 9.747.2.7 addRemoveTagsMenu()

```
void Digikam::ImportContextMenuHelper::addRemoveTagsMenu (
    itemIds & ids )
```

This menu will provide a list of all tags assigned to the current items. Actions triggered in here will remove the selected tag from the items.

To make this menu work, you need to run [exec\(\)](#) from this class, otherwise the signals are not emitted and you will not be able to react on triggered actions from this menu. Make sure to connect the signals to the appropriate slots in the context menu handling method.

**Parameters**

<i>ids</i>	the selected items
------------	--------------------

**See also**

[exec\(\)](#)  
[signalRemoveTag\(\)](#)

**9.747.2.8 addRotateMenu()**

```
void Digikam::ImportContextMenuHelper::addRotateMenu (
    itemIds & ids )
```

**Parameters**

<i>ids</i>	the selected items
------------	--------------------

**9.747.2.9 addServicesMenu()**

```
void Digikam::ImportContextMenuHelper::addServicesMenu (
    const QList< QUrl > & selectedItems )
```

The services menu is used to open the selected items in a different application. It will query the item for registered services and provide them in a submenu. The menu will be titled "Open With...".

**Parameters**

<i>selectedItems</i>	the list of selected items
----------------------	----------------------------

**9.747.2.10 addSubMenu()**

```
void Digikam::ImportContextMenuHelper::addSubMenu (
    QMenu * subMenu )
```

**Parameters**

<i>subMenu</i>	the submenu to be added
----------------	-------------------------

**9.747.2.11 exec()**

```
QAction * Digikam::ImportContextMenuHelper::exec (
    const QPoint & pos,
    QAction * at = nullptr )
```

Always use this method instead the one from the parent menu. It will ensure that the signals are emitted and special cases are handled.

**Parameters**

<i>pos</i>	position of the triggered action in the registered menu
<i>at</i>	the action that should be at the position pos

**Returns**

the triggered action

**9.747.2.12 setImportFilterModel()**

```
void Digikam::ImportContextMenuHelper::setImportFilterModel (  
    ImportFilterModel * model )
```

Some of the group actions will operate directly on the model.

## 9.748 Digikam::ImportCoordinatesOverlay Class Reference

Inheritance diagram for Digikam::ImportCoordinatesOverlay:

### Public Member Functions

- **ImportCoordinatesOverlay** (QObject \*const parent)
- **ImportOverlayWidget** \* **buttonWidget** () const

### 9.748.1 Member Function Documentation

#### 9.748.1.1 `checkIndex()`

```
bool Digikam::ImportCoordinatesOverlay::checkIndex (
    const QModelIndex & index ) const [override], [protected], [virtual]
```

The default implementation returns true.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.748.1.2 createWidget()

```
QWidget * Digikam::ImportCoordinatesOverlay::createWidget ( ) [override], [protected], [virtual]
```

When creating the object, pass [parentWidget\(\)](#) as parent widget. Ownership of the object is passed. It will be deleted in [setActive\(false\)](#).

Implements [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.748.1.3 setActive()

```
void Digikam::ImportCoordinatesOverlay::setActive (
    bool active ) [override], [protected], [virtual]
```

If active is false, this will delete the widget and disconnect all signal from model and view to this object (!)

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.748.1.4 slotEntered()

```
void Digikam::ImportCoordinatesOverlay::slotEntered (
    const QModelIndex & index ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

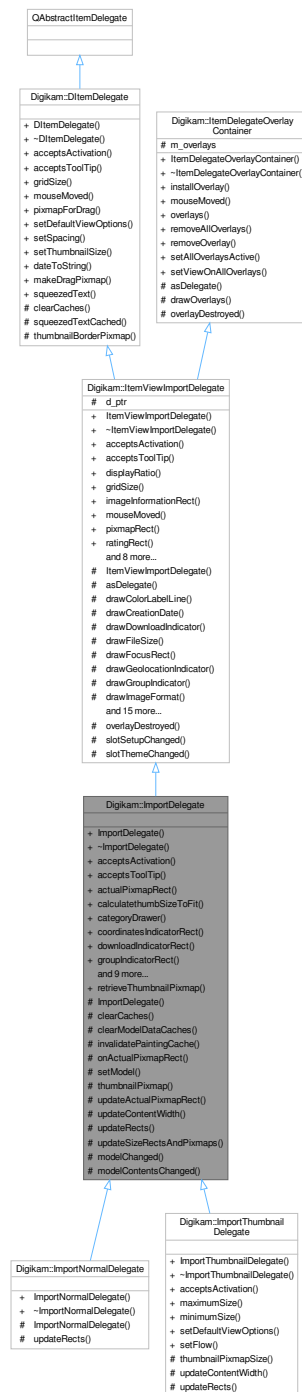

### 9.748.1.5 visualChange()

```
void Digikam::ImportCoordinatesOverlay::visualChange ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemDelegateOverlay](#).

## 9.749 Digikam::ImportDelegate Class Reference

Inheritance diagram for Digikam::ImportDelegate:

### Public Member Functions

- **ImportDelegate** (QWidget \*const parent)
- bool **acceptsActivation** (const QPoint &pos, const QRect &visualRect, const QModelIndex &index, QRect \*activationRect=nullptr) const override

- bool [acceptsToolTip](#) (const QPoint &pos, const QRect &visualRect, const QModelIndex &index, QRect \*tooltipRect=nullptr) const override  
*These methods take four parameters: The position on viewport, the rect on viewport, the index, and optionally a parameter into which, if the return value is true, a rectangle can be written for which the return value will be true as well.*
- QRect [actualPixmapRect](#) (const QModelIndex &index) const
- int [calculatethumbSizeToFit](#) (int ws)
- [ImportCategoryDrawer](#) \* [categoryDrawer](#) () const

- QList< [ItemDelegateOverlay](#) \* > **overlays** () const
- void **removeAllOverlays** ()
- void **removeOverlay** ([ItemDelegateOverlay](#) \*overlay)
- void **setAllOverlaysActive** (bool active)
- void **setViewOnAllOverlays** (QAbstractItemView \*view)

## Static Public Member Functions

- static QPixmap **retrieveThumbnailPixmap** (const QModelIndex &index, int thumbnailSize)  
*Retrieve the thumbnail pixmap in given size for the [ImportItemModel::ThumbnailRole](#) for the given index from the given index, which must adhere to [ImportThumbnailModel](#) semantics.*

## Static Public Member Functions inherited from [Digikam::DItemDelegate](#)

- static QString **dateToString** (const QDateTime &datetime)
- static QPixmap **makeDragPixmap** (const QStyleOptionViewItem &option, const QList< QModelIndex > &indexes, double displayRatio, const QPixmap &suggestedPixmap=QPixmap())
- static QString **squeezedText** (const QFontMetrics &fm, int width, const QString &text)

## Protected Slots

- void **modelChanged** ()
- void **modelContentsChanged** ()

## Protected Slots inherited from [Digikam::ItemViewImportDelegate](#)

- void **overlayDestroyed** (QObject \*o) override
- void **slotSetupChanged** ()
- void **slotThemeChanged** ()

## Protected Member Functions

- **ImportDelegate** (ImportDelegate::ImportDelegatePrivate &dd, QWidget \*const parent)
- void **clearCaches** () override
- virtual void **clearModelDataCaches** ()
  - Reimplement to clear caches based on model indexes (hash on row number etc.) Change signals are listened to this is called whenever such properties become invalid.*
- void **invalidatePaintingCache** () override
  - reimplement these in subclasses*
- bool **onActualPixmapRect** (const QPoint &pos, const QRect &visualRect, const QModelIndex &index, QRect \*actualRect) const
- void **setModel** (QAbstractItemModel \*model)
- virtual QPixmap **thumbnailPixmap** (const QModelIndex &index) const
- void **updateActualPixmapRect** (const QModelIndex &index, const QRect &rct)
- virtual void **updateContentWidth** ()
  - Reimplement this to set contentWidth.*
- virtual void **updateRects** ()=0
  - In a subclass, you need to implement this method to set up the rects for drawing.*
- void **updateSizeRectsAndPixmaps** () override

## Protected Member Functions inherited from [Digikam::ItemViewImportDelegate](#)

- **ItemViewImportDelegate** (ItemViewImportDelegatePrivate &dd, QWidget \*const parent)
- QAbstractItemDelegate \* **asDelegate** () override
  - Returns the delegate, typically, the derived class.*
- void **drawColorLabelLine** (QPainter \*p, const QRect &pixRect, int colorId) const
- void **drawCreationDate** (QPainter \*p, const QRect &dateRect, const QDateTime &date) const
- void **drawDownloadIndicator** (QPainter \*p, const QRect &r, int itemType) const
- void **drawFileSize** (QPainter \*p, const QRect &r, qlonglong bytes) const
- void **drawFocusRect** (QPainter \*p, const QStyleOptionViewItem &option, bool isSelected) const
- void **drawGeolocationIndicator** (QPainter \*p, const QRect &r) const
- void **drawGroupIndicator** (QPainter \*p, const QRect &r, int numberOfGroupedImages, bool open) const
- void **drawImageFormat** (QPainter \*p, const QRect &dimsRect, const QString &mime) const
- void **drawImageSize** (QPainter \*p, const QRect &dimsRect, const QSize &dims) const
- void **drawLockIndicator** (QPainter \*p, const QRect &r, int lockStatus) const
- void **drawMouseOverRect** (QPainter \*p, const QStyleOptionViewItem &option) const
- void **drawName** (QPainter \*p, const QRect &nameRect, const QString &name) const
- void **drawPickLabelIcon** (QPainter \*p, const QRect &r, int pickLabel) const
- void **drawRating** (QPainter \*p, const QModelIndex &index, const QRect &ratingRect, int rating, bool isSelected) const
- void **drawTags** (QPainter \*p, const QRect &r, const QString &tagsString, bool isSelected) const
- QRect **drawThumbnail** (QPainter \*p, const QRect &thumbRect, const QPixmap &background, const QPixmap &thumbnail) const
  - Use the tool methods for painting in subclasses.*
- void **prepareBackground** ()
- void **prepareFonts** ()
- void **prepareMetrics** (int maxWidth)
- void **prepareRatingPixmaps** (bool composeOverBackground=true)
- QPixmap **ratingPixmap** (int rating, bool selected) const
  - Returns the relevant pixmap from the cached rating pixmaps.*

## Protected Member Functions inherited from [Digikam::DItemDelegate](#)

- QString **squeezedTextCached** (QPainter \*const p, int width, const QString &text) const
- QPixmap **thumbnailBorderPixmap** (const QSize &pixSize, bool isGrouped=false) const

## Protected Member Functions inherited from [Digikam::ItemDelegateOverlayContainer](#)

- virtual void **drawOverlays** (QPainter \*p, const QStyleOptionViewItem &option, const QModelIndex &index) const
- virtual void **overlayDestroyed** (QObject \*o)

*Declare as slot in the derived class calling this method.*

## Additional Inherited Members

## Signals inherited from [Digikam::ItemViewImportDelegate](#)

- void **hideNotification** ()
- void **requestNotification** (const QModelIndex &index, const QString &message)

## Signals inherited from [Digikam::DItemDelegate](#)

- void **gridSizeChanged** (const QSize &newSize)
- void **visualChange** ()

## Protected Attributes inherited from [Digikam::ItemViewImportDelegate](#)

- ItemViewImportDelegatePrivate \*const **d\_ptr** = nullptr

## Protected Attributes inherited from [Digikam::ItemDelegateOverlayContainer](#)

- QList< [ItemDelegateOverlay](#) \* > **m\_overlays**

## 9.749.1 Member Function Documentation

### 9.749.1.1 acceptsActivation()

```
bool Digikam::ImportDelegate::acceptsActivation (
    const QPoint & pos,
    const QRect & visualRect,
    const QModelIndex & index,
    QRect * activationRect = nullptr ) const [override], [virtual]
```

Implements [Digikam::DItemDelegate](#).

### 9.749.1.2 acceptsToolTip()

```
bool Digikam::ImportDelegate::acceptsToolTip (
    const QPoint & pos,
    const QRect & visualRect,
    const QModelIndex & index,
    QRect * tooltipRect = nullptr ) const [override], [virtual]
```

Implements [Digikam::DItemDelegate](#).

### 9.749.1.3 clearCaches()

```
void Digikam::ImportDelegate::clearCaches ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::DItemDelegate](#).

### 9.749.1.4 imageInformationRect()

```
QRect Digikam::ImportDelegate::imageInformationRect ( ) const [override], [virtual]
```

The image information is textual or graphical information, but not the pixmap. The [ratingRect\(\)](#) will e.g. typically be contained in this area.

Reimplemented from [Digikam::ItemViewImportDelegate](#).

### 9.749.1.5 invalidatePaintingCache()

```
void Digikam::ImportDelegate::invalidatePaintingCache ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemViewImportDelegate](#).

### 9.749.1.6 pixmapForDrag()

```
QPixmap Digikam::ImportDelegate::pixmapForDrag (
    const QStyleOptionViewItem & option,
    const QList< QModelIndex > & indexes ) const [override], [virtual]
```

Implements [Digikam::DItemDelegate](#).

### 9.749.1.7 pixmapRect()

```
QRect Digikam::ImportDelegate::pixmapRect ( ) const [override], [virtual]
```

Reimplemented from [Digikam::ItemViewImportDelegate](#).

### 9.749.1.8 setDefaultViewOptions()

```
void Digikam::ImportDelegate::setDefaultViewOptions (
    const QStyleOptionViewItem & option ) [override], [virtual]
```

option.rect shall be the viewport rectangle. Call on resize, font change.

Implements [Digikam::DItemDelegate](#).

Reimplemented in [Digikam::ImportThumbnailDelegate](#).

### 9.749.1.9 setSpacing()

```
void Digikam::ImportDelegate::setSpacing (
    int spacing ) [override], [virtual]
```

Implements [Digikam::DItemDelegate](#).

### 9.749.1.10 updateContentWidth()

```
void Digikam::ImportDelegate::updateContentWidth ( ) [protected], [virtual]
```

This is the maximum width of all content rectangles, typically excluding margins on both sides.

Reimplemented in [Digikam::ImportThumbnailDelegate](#).

### 9.749.1.11 updateRects()

```
virtual void Digikam::ImportDelegate::updateRects ( ) [protected], [pure virtual]
```

The paint() method operates depending on these rects.

Implemented in [Digikam::ImportThumbnailDelegate](#), and [Digikam::ImportNormalDelegate](#).

### 9.749.1.12 updateSizeRectsAndPixmapes()

```
void Digikam::ImportDelegate::updateSizeRectsAndPixmapes ( ) [override], [protected], [virtual]
```

Implements [Digikam::ItemViewImportDelegate](#).

## Protected Slots inherited from [Digikam::ItemDelegateOverlay](#)

### 9.750.1 Member Function Documentation

#### 9.750.1.1 `checkIndex()`

```
bool Digikam::ImportDownloadOverlay::checkIndex (
    const QModelIndex & index ) const [override], [protected], [virtual]
```

The default implementation returns true.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.750.1.2 createWidget()

```
QWidget * Digikam::ImportDownloadOverlay::createWidget ( ) [override], [protected], [virtual]
```

When creating the object, pass [parentWidget\(\)](#) as parent widget. Ownership of the object is passed. It will be deleted in [setActive\(false\)](#).

Implements [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.750.1.3 setActive()

```
void Digikam::ImportDownloadOverlay::setActive (
    bool active ) [override], [protected], [virtual]
```

If active is false, this will delete the widget and disconnect all signal from model and view to this object (!)

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.750.1.4 slotEntered()

```
void Digikam::ImportDownloadOverlay::slotEntered (
    const QModelIndex & index ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.750.1.5 visualChange()

```
void Digikam::ImportDownloadOverlay::visualChange ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemDelegateOverlay](#).

## 9.751 Digikam::ImportDragDropHandler Class Reference

Inheritance diagram for Digikam::ImportDragDropHandler:

### Public Member Functions

- **ImportDragDropHandler** ([ImportItemModel](#) \*const model)
- Qt::DropAction **accepts** (const QDropEvent \*e, const QModelIndex &dropIndex) override  
*Returns if the given mime data is accepted for drop on dropIndex.*
- QMimeData \* **createMimeData** (const QList< QModelIndex > &) override  
*Create a mime data object for starting a drag from the given Albums.*
- bool **dropEvent** (QAbstractItemView \*view, const QDropEvent \*e, const QModelIndex &droppedOn) override  
*Gives the view and the occurring drop event.*

- QStringList [mimeTypes](#) () const override  
*Returns the supported mime types.*
- [ImportItemModel](#) \* **model** () const

## Public Member Functions inherited from [Digikam::AbstractItemDragDropHandler](#)

- **AbstractItemDragDropHandler** (QAbstractItemModel \*const model)
- virtual bool [acceptsMimeData](#) (const QMimeData \*data)  
*Returns if the given mime data can be handled.*
- QAbstractItemModel \* **model** () const

## Additional Inherited Members

## Protected Attributes inherited from [Digikam::AbstractItemDragDropHandler](#)

- QAbstractItemModel \* **m\_model** = nullptr

## 9.751.1 Member Function Documentation

### 9.751.1.1 [accepts\(\)](#)

```
Qt::DropAction Digikam::ImportDragDropHandler::accepts (
    const QDropEvent * e,
    const QModelIndex & dropIndex ) [override], [virtual]
```

Returns the proposed action, or Qt::IgnoreAction if not accepted.

Reimplemented from [Digikam::AbstractItemDragDropHandler](#).

### 9.751.1.2 [createMimeData\(\)](#)

```
QMimeData * Digikam::ImportDragDropHandler::createMimeData (
    const QList< QModelIndex > & ) [override], [virtual]
```

Reimplemented from [Digikam::AbstractItemDragDropHandler](#).

### 9.751.1.3 [dropEvent\(\)](#)

```
bool Digikam::ImportDragDropHandler::dropEvent (
    QAbstractItemView * view,
    const QDropEvent * e,
    const QModelIndex & droppedOn ) [override], [virtual]
```

The index is the index where the drop was dropped on. It may be invalid (dropped on decoration, viewport) Returns true if the event is to be accepted.

Reimplemented from [Digikam::AbstractItemDragDropHandler](#).

### 9.751.1.4 mimeTypees()

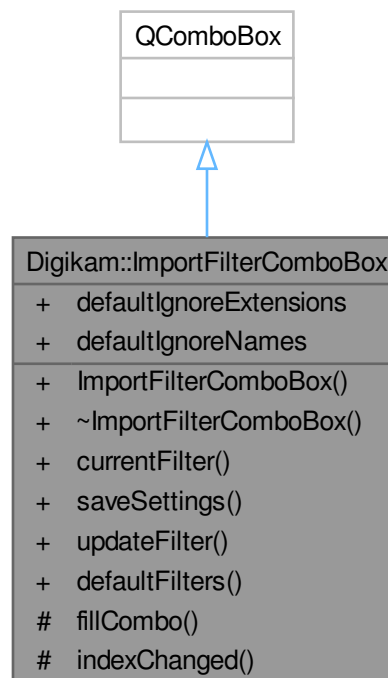

```
QStringList Digikam::ImportDragDropHandler::mimeTypees ( ) const [override], [virtual]
```

Called by the default implementation of model's [mimeTypees\(\)](#).

Reimplemented from [Digikam::AbstractItemDragDropHandler](#).

### 9.754.1 Member Enumeration Documentation

#### 9.754.1.1 ImportFilterModelRoles

enum [Digikam::ImportFilterModel::ImportFilterModelRoles](#)

##### Enumerator

<code>CategorizationModeRole</code>	Returns the current categorization mode.
<code>SortOrderRole</code>	Returns the current sort order.
<code>CategoryFormatRole</code>	Returns the format of the index which is used for category.
<code>CategoryDateRole</code>	Returns the date of the index which is used for category.
<code>ImportFilterModelPointerRole</code>	Returns true if the given camera item is a group leader, and the group is opened.

### 9.754.2 Member Function Documentation

#### 9.754.2.1 camItemInfosAdded

```
void Digikam::ImportFilterModel::camItemInfosAdded (
    const QList< CamItemInfo > & infos ) [signal]
```

Changes the current image sort settings and resorts. These signals need to be explicitly enabled with `setSendItemInfoSignals()`.

#### 9.754.2.2 categoryIdentifier()

```
QString Digikam::ImportFilterModel::categoryIdentifier (
    const CamItemInfo & info ) const [protected], [virtual]
```

The string need not be for user display.

#### 9.754.2.3 compareCategories()

```
int Digikam::ImportFilterModel::compareCategories (
    const QModelIndex & left,
    const QModelIndex & right ) const [override], [protected], [virtual]
```

Internally and if not reimplemented, this method will ask for `left` and `right` models for role `CategorySortRole`. In order to correctly sort categories, the `data()` method of the model should return a `qulonglong` (or numeric) value, or a `QString` object. `QString` objects will be sorted with `QString::localeAwareCompare` if `sortCategoriesByNaturalComparison()` is true.

**Note**

Please have present that: `QString(QChar(QChar::ObjectReplacementCharacter)) > QString(QChar(QChar::ReplacementCharacter)) > [ all possible strings ] > QString();`

This means that `QString()` will be sorted the first one, while `QString(QChar(QChar::ObjectReplacementCharacter))` and `QString(QChar(QChar::ReplacementCharacter))` will be sorted in last position.

**Warning**

Please note that `data()` method of the model should return always information of the same type. If you return a `QString` for an index, you should return always `QStrings` for all indexes for role `CategorySortRole` in order to correctly sort categories. You can't mix by returning a `QString` for one index, and a `qlonglong` for other.

**Note**

If you need a more complex layout, you will have to reimplement this method.

**Returns**

A negative value if the category of `left` should be placed before the category of `right`. 0 if `left` and `right` are on the same category, and a positive value if the category of `left` should be placed after the category of `right`.

Reimplemented from [Digikam::DCategorizedSortFilterProxyModel](#).

**9.754.2.4 importFilterModel()**

```
ImportFilterModel * Digikam::ImportFilterModel::importFilterModel ( ) const [override], [virtual]
```

Reimplemented from [Digikam::ImportSortFilterModel](#).

**9.754.2.5 infosLessThan()**

```
bool Digikam::ImportFilterModel::infosLessThan (
    const CamItemInfo & left,
    const CamItemInfo & right ) const [protected], [virtual]
```

Do not take categories into account here.

**9.754.2.6 setDirectSourceImportModel()**

```
void Digikam::ImportFilterModel::setDirectSourceImportModel (
    ImportItemModel *const sourceModel ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ImportSortFilterModel](#).

### 9.754.2.7 subSortLessThan()

```
bool Digikam::ImportFilterModel::subSortLessThan (  
    const QModelIndex & left,  
    const QModelIndex & right ) const [override], [protected], [virtual]
```

It is used for sorting items that are in the same category.

#### Returns

Returns true if the item `left` is less than the item `right` when sorting.

Reimplemented from [Digikam::DCategorizedSortFilterProxyModel](#).

- void **assignPickLabel** (const QModelIndex &index, int pickId)
- void **assignPickLabelToSelected** (int pickId)
- void **assignRating** (const QList< QModelIndex > &index, int rating)

## 9.755.1 Member Function Documentation

### 9.755.1.1 activated()

```
void Digikam::ImportIconView::activated (
    const CamItemInfo & info,
    Qt::KeyboardModifiers modifiers ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ImportCategorizedView](#).

### 9.755.1.2 setThumbnailSize()

```
void Digikam::ImportIconView::setThumbnailSize (
    const ThumbnailSize & size ) [override], [virtual]
```

Reimplemented from [Digikam::ImportCategorizedView](#).

### 9.755.1.3 showContextMenu()

```
void Digikam::ImportIconView::showContextMenu (
    QContextMenuEvent * event ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemViewCategorized](#).

### 9.755.1.4 showContextMenuOnInfo()

```
void Digikam::ImportIconView::showContextMenuOnInfo (
    QContextMenuEvent * event,
    const CamItemInfo & info ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ImportCategorizedView](#).

### 9.755.1.5 slotSetupChanged()

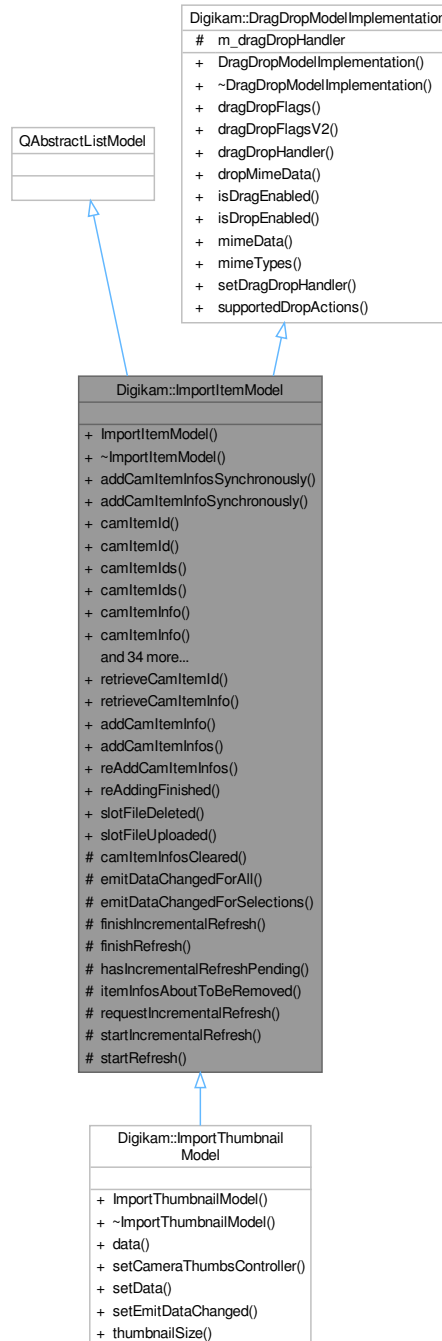

```
void Digikam::ImportIconView::slotSetupChanged ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemViewCategorized](#).

## 9.756 Digikam::ImportItemModel Class Reference

Inheritance diagram for Digikam::ImportItemModel:

### Public Types

- enum [ImportItemModelRoles](#) {
  - [ImportItemModelPointerRole](#) = Qt::UserRole , [ImportItemModelInternalId](#) = Qt::UserRole + 1 ,
  - [ThumbnailRole](#) = Qt::UserRole + 2 , [ExtraDataRole](#) = Qt::UserRole + 3 ,
  - [ExtraDataDuplicateCount](#) = Qt::UserRole + 6 , [FilterModelRoles](#) = Qt::UserRole + 100 }

## Public Slots

- void **addCamItemInfo** (const [CamItemInfo](#) &info)
- void **addCamItemInfos** (const [CamItemInfoList](#) &infos)
- void **reAddCamItemInfos** (const [CamItemInfoList](#) &infos)
- void **reAddingFinished** ()
- void **slotFileDeleted** (const QString &folder, const QString &file, bool status)
- void **slotFileUploaded** (const [CamItemInfo](#) &info)

## Signals

- void [allRefreshingFinished](#) ()  
*Signals that the model has finished currently with all scheduled refreshing, full or incremental, and all preprocessing.*
- void [itemInfosAboutToBeAdded](#) (const QList< [CamItemInfo](#) > &infos)  
*Informs that ItemInfos will be added to the model.*
- void [itemInfosAboutToBeRemoved](#) (const QList< [CamItemInfo](#) > &infos)  
*Informs that CamItemInfos will be removed from the model.*
- void [itemInfosAdded](#) (const QList< [CamItemInfo](#) > &infos)  
*Informs that ItemInfos have been added to the model.*
- void [itemInfosRemoved](#) (const QList< [CamItemInfo](#) > &infos)  
*Informs that CamItemInfos have been removed from the model.*
- void **preprocess** (const QList< [CamItemInfo](#) > &infos)  
*Connect to this signal only if you are the current preprocessor.*
- void **processAdded** (const QList< [CamItemInfo](#) > &infos)
- void [readyForIncrementalRefresh](#) ()  
*Signals that the model is right now ready to start an incremental refresh.*

## Public Member Functions

- **ImportItemModel** (QObject \*const parent=nullptr)
- void **addCamItemInfosSynchronously** (const [Digikam::CamItemInfoList](#) &infos)
- void [addCamItemInfoSynchronously](#) (const [CamItemInfo](#) &info)  
*addCamItemInfo() is asynchronous if a preprocessor is set.*
- qlonglong **camItemId** (const [QModelIndex](#) &index) const
- qlonglong **camItemId** (int row) const
- QList< qlonglong > **camItemIds** () const
- QList< qlonglong > **camItemIds** (const QList< [QModelIndex](#) > &indexes) const
- [CamItemInfo](#) **camItemInfo** (const [QModelIndex](#) &index) const  
*Returns the [CamItemInfo](#) object, reference from the underlying data pointed to by the index.*
- [CamItemInfo](#) **camItemInfo** (const [QUrl](#) &fileUrl) const
- [CamItemInfo](#) **camItemInfo** (int row) const  
*Returns the [CamItemInfo](#) object, reference from the underlying data of the given row (parent is the invalid [QModelIndex](#), column is 0).*
- [CamItemInfo](#) & **camItemInfoRef** (const [QModelIndex](#) &index) const
- [CamItemInfo](#) & **camItemInfoRef** (int row) const
- QList< [CamItemInfo](#) > **camItemInfos** () const
- [CamItemInfoList](#) **camItemInfos** (const QList< [QModelIndex](#) > &indexes) const
- QList< [CamItemInfo](#) > **camItemInfos** (const [QUrl](#) &fileUrl) const
- void **clearCamItemInfos** ()  
*Clears the CamItemInfos and resets the model.*
- [QVariant](#) **data** (const [QModelIndex](#) &index, int role) const override

- Qt::ItemFlags **flags** (const QModelIndex &index) const override
- bool **hasImage** (const CamItemInfo &info) const
- bool **hasImage** (qulonglong id) const
- QVariant **headerData** (int section, Qt::Orientation orientation, int role) const override
- QModelIndex **index** (int row, int column, const QModelIndex &parent) const override
- QList< QModelIndex > **indexesForCamItemId** (qulonglong id) const
- QList< QModelIndex > **indexesForCamItemInfo** (const CamItemInfo &info) const
- QList< QModelIndex > **indexesForUrl** (const QUrl &fileUrl) const
- QModelIndex **indexForCamItemId** (qulonglong id) const
- QModelIndex **indexForCamItemInfo** (const CamItemInfo &info) const
  - Return the index of a given CamItemInfo, if it exists in the model.*
- QModelIndex **indexForUrl** (const QUrl &fileUrl) const
  - Returns the index or CamItemInfo object from the underlying data for the given file url.*
- bool **isEmpty** () const
- bool **isRefreshing** () const
  - Returns true if this model is currently refreshing.*
- bool **keepsFileUrlCache** () const
- int **numberOfIndexesForCamItemId** (qulonglong id) const
- int **numberOfIndexesForCamItemInfo** (const CamItemInfo &info) const
- void **removeCamItemInfo** (const CamItemInfo &info)
- void **removeCamItemInfos** (const QList< CamItemInfo > &infos)
- void **removeIndex** (const QModelIndex &index)
  - Remove the given infos or indexes directly from the model.*
- void **removeIndexes** (const QList< QModelIndex > &indexes)
- int **rowCount** (const QModelIndex &parent) const override
  - QAbstractListModel implementation.*
- virtual void **setCameraThumbsController** (CameraThumbsCtrl \*const controller)
  - Used to set the camera controller, and connect with it.*
- void **setCamItemInfos** (const CamItemInfoList &infos)
  - Clears and adds infos.*
- void **setKeepsFileUrlCache** (bool keepCache)
  - If a cache is kept, lookup by file path is fast, without a cache it is O(n).*
- DECLARE\_MODEL\_DRAG\_DROP\_METHODS void **setSendRemovalSignals** (bool send)
  - DragDrop methods.*
- QList< CamItemInfo > **uniqueCamItemInfos** () const

## Public Member Functions inherited from Digikam::DragDropModelImplementation

- **DragDropModelImplementation** ()=default
  - A class providing a sample implementation for a QAbstractItemModel redirecting drag-and-drop support to a handler.*
- virtual Qt::ItemFlags **dragDropFlags** (const QModelIndex &index) const
  - Call from your flags() method, adding the relevant drag drop flags.*
- Qt::ItemFlags **dragDropFlagsV2** (const QModelIndex &index) const
  - This is an alternative approach to dragDropFlags().*
- **AbstractItemDragDropHandler** \* **dragDropHandler** () const
- bool **dropMimeData** (const QMimeData \*, Qt::DropAction, int, int, const QModelIndex &)
- virtual bool **isDragEnabled** (const QModelIndex &index) const
- virtual bool **isDropEnabled** (const QModelIndex &index) const
- QMimeData \* **mimeData** (const QModelIndexList &indexes) const
- QStringList **mimeTypes** () const
- void **setDragDropHandler** (**AbstractItemDragDropHandler** \*handler)
  - Set a drag drop handler.*
- Qt::DropActions **supportedDropActions** () const
  - Implements the relevant QAbstractItemModel methods for drag and drop.*

## Static Public Member Functions

- static qlonglong **retrieveCamItemId** (const QModelIndex &index)
- static [CamItemInfo](#) **retrieveCamItemInfo** (const QModelIndex &index)

Retrieve the [CamItemInfo](#) object from the `data()` function of the given index. The index may be from a `QSortFilterProxyModel` as long as an [ImportItemModel](#) is at the end.

## Protected Member Functions

- virtual void **camItemInfosCleared** ()  
Called when the internal storage is cleared.
- void **emitDataChangedForAll** ()
- void **emitDataChangedForSelections** (const QItemSelection &selection)
- void **finishIncrementalRefresh** ()
- void **finishRefresh** ()
- bool **hasIncrementalRefreshPending** () const
- virtual void **itemInfosAboutToBeRemoved** (int, int)  
Called before `rowsAboutToBeRemoved`.
- void [requestIncrementalRefresh](#) ()  
As soon as the model is ready to start an incremental refresh, the signal [readyForIncrementalRefresh\(\)](#) will be emitted.
- void [startIncrementalRefresh](#) ()  
Starts an incremental refresh operation.
- void [startRefresh](#) ()  
Subclasses that add `CamItemInfos` in batches shall call [startRefresh\(\)](#) when they start sending batches and `finishRefresh()` when they have finished.

## Additional Inherited Members

## Protected Attributes inherited from [Digikam::DragDropModelImplementation](#)

- [AbstractItemDragDropHandler](#) \* `m_dragDropHandler` = nullptr

## 9.756.1 Member Enumeration Documentation

### 9.756.1.1 [ImportItemModelRoles](#)

```
enum Digikam::ImportItemModel::ImportItemModelRoles
```

#### Enumerator

<code>ImportItemModelPointerRole</code>	An <code>ImportItemModel*</code> pointer to this model.
<code>ThumbnailRole</code>	Returns a thumbnail pixmap. May be implemented by subclasses. Returns either a valid pixmap or a null <code>QVariant</code> .
<code>ExtraDataRole</code>	Return (optional) <code>extraData</code> field.
<code>ExtraDataDuplicateCount</code>	Returns the number of duplicate indexes for the same image id.

## 9.756.2 Member Function Documentation

### 9.756.2.1 addCamItemInfoSynchronously()

```
void Digikam::ImportItemModel::addCamItemInfoSynchronously (
    const CamItemInfo & info )
```

This method first adds the info, synchronously. Only afterwards, the preprocessor will have the opportunity to process it. This method also bypasses any incremental updates.

### 9.756.2.2 allRefreshingFinished

```
void Digikam::ImportItemModel::allRefreshingFinished ( ) [signal]
```

The model is in polished, clean situation right now.

### 9.756.2.3 camItemInfo() [1/2]

```
CamItemInfo Digikam::ImportItemModel::camItemInfo (
    const QModelIndex & index ) const
```

For `camItemInfo` and `camItemInfoRef` If the index is not valid they will return a null [CamItemInfo](#), and 0 respectively, `camItemInfoRef` must not be called with an invalid index as it will crash.

### 9.756.2.4 camItemInfo() [2/2]

```
CamItemInfo Digikam::ImportItemModel::camItemInfo (
    int row ) const
```

Note that `camItemInfoRef` must not be called with an invalid index as it will crash.

### 9.756.2.5 indexForUrl()

```
QModelIndex Digikam::ImportItemModel::indexForUrl (
    const QUrl & fileUrl ) const
```

In case of multiple occurrences of the same file, the simpler overrides returns any one found first, use the `QList` methods to retrieve all occurrences.

### 9.756.2.6 isRefreshing()

```
bool Digikam::ImportItemModel::isRefreshing ( ) const
```

For a preprocessor this means that, although the preprocessor may currently have processed all it got, more batches are to be expected.

### 9.756.2.7 itemInfosAboutToBeAdded

```
void Digikam::ImportItemModel::itemInfosAboutToBeAdded (
    const QList< CamItemInfo > & infos ) [signal]
```

This signal is sent before the model data is changed and views are informed.

### 9.756.2.8 itemInfosAboutToBeRemoved

```
void Digikam::ImportItemModel::itemInfosAboutToBeRemoved (
    const QList< CamItemInfo > & infos ) [signal]
```

This signal is sent before the model data is changed and views are informed. Note: You need to explicitly enable sending of this signal. It is not sent in [clearCamItemInfos\(\)](#).

### 9.756.2.9 itemInfosAdded

```
void Digikam::ImportItemModel::itemInfosAdded (
    const QList< CamItemInfo > & infos ) [signal]
```

This signal is sent after the model data is changed and views are informed.

### 9.756.2.10 itemInfosRemoved

```
void Digikam::ImportItemModel::itemInfosRemoved (
    const QList< CamItemInfo > & infos ) [signal]
```

This signal is sent after the model data is changed and views are informed. Note: You need to explicitly enable sending of this signal. It is not sent in [clearCamItemInfos\(\)](#).

### 9.756.2.11 readyForIncrementalRefresh

```
void Digikam::ImportItemModel::readyForIncrementalRefresh ( ) [signal]
```

This is guaranteed only for the scope of emitting this signal.

### 9.756.2.12 requestIncrementalRefresh()

```
void Digikam::ImportItemModel::requestIncrementalRefresh ( ) [protected]
```

The signal will be emitted inline if the model is ready right now.

### 9.756.2.13 setCameraThumbsController()

```
void Digikam::ImportItemModel::setCameraThumbsController (
    CameraThumbsCtrl *const controller ) [virtual]
```

Reimplemented in [Digikam::ImportThumbnailModel](#).

#### 9.756.2.14 setKeepsFileUrlCache()

```
void DigiKam::ImportItemModel::setKeepsFileUrlCache (
    bool keepCache )
```

Default is false.

#### 9.756.2.15 setSendRemovalSignals()

```
void DigiKam::ImportItemModel::setSendRemovalSignals (
    bool send )
```

Enable sending of `itemInfosAboutToBeRemoved` and `itemsInfosRemoved` signals. Default: false

#### 9.756.2.16 startIncrementalRefresh()

```
void DigiKam::ImportItemModel::startIncrementalRefresh ( ) [protected]
```

You shall only call this method from a slot connected to [readyForIncrementalRefresh\(\)](#). To initiate an incremental refresh, call [requestIncrementalRefresh\(\)](#).

#### 9.756.2.17 startRefresh()

```
void DigiKam::ImportItemModel::startRefresh ( ) [protected]
```

No incremental refreshes will be started while listing. A [clearCamItemInfos\(\)](#) always stops listing, calling `finishRefresh()` is then not necessary.

## 9.757 Digikam::ImportItemPropertiesSideBarImport Class Reference

Inheritance diagram for Digikam::ImportItemPropertiesSideBarImport:

### Public Slots

- virtual void `slotNoCurrentItem ()`

## Signals

- void **signalFirstItem** ()
- void **signalLastItem** ()
- void **signalNextItem** ()
- void **signalPrevItem** ()

## Signals inherited from [Digikam::Sidebar](#)

- void **signalChangedTab** (QWidget \*w)  
*Is emitted, when another tab is activated.*
- void **signalViewChanged** ()  
*Is emitted, when tab is shrink or expanded.*

## Public Member Functions

- **ImportItemPropertiesSideBarImport** (QWidget \*const parent, [SidebarSplitter](#) \*const splitter, Qt::Edge side=Qt::LeftEdge, bool mimimizedDefault=false)
- void **applySettings** ()
- void **itemChanged** (const [CamItemInfo](#) &itemInfo, const [DMetadata](#) &meta)
- [QUrl](#) **url** () const

## Public Member Functions inherited from [Digikam::Sidebar](#)

- [Sidebar](#) (QWidget \*const parent, [SidebarSplitter](#) \*const sp, Qt::Edge side=Qt::LeftEdge, bool minimized↔ Default=false)  
*Creates a new sidebar.*
- void **activeNextTab** ()  
*Activates a next tab from current one.*
- void **activePreviousTab** ()  
*Activates a previous tab from current one.*
- void **appendTab** (QWidget \*const w, const [QIcon](#) &pic, const [QString](#) &title)  
*Appends a new tab to the sidebar.*
- void **backup** ()  
*Hide sidebar and backup minimized state.*
- void **backup** (const [QList](#)< [QWidget](#) \* > &thirdWidgetsToBackup, [QList](#)< int > \*const sizes)  
*Hide sidebar and backup minimized state.*
- void **deleteTab** (QWidget \*const w)  
*Deletes a tab from the tabbar.*
- void **expand** ()  
*Redisplays the whole sidebar.*
- [QWidget](#) \* **getActiveTab** () const  
*Returns the currently activated tab, or 0 if no tab is active.*
- bool **isExpanded** () const  
*Return the visible status of current sidebar tab.*
- void **restore** ()  
*Show sidebar and restore minimized state.*
- void **restore** (const [QList](#)< [QWidget](#) \* > &thirdWidgetsToRestore, const [QList](#)< int > &sizes)  
*Show sidebar and restore minimized state.*
- void **setActiveTab** (QWidget \*const w)  
*Activates a tab.*
- void **shrink** ()  
*Hides the sidebar (display only the activation buttons)*
- [SidebarSplitter](#) \* **splitter** () const

## Public Member Functions inherited from [Digikam::DMultiTabBar](#)

- **DMultiTabBar** (Qt::Edge pos, QWidget \*const parent=nullptr)
- void [appendButton](#) (const QIcon &pic, int id=-1, QMenu \*const popup=nullptr, const QString &not\_used\_↔ yet=QString())  
*append a new button to the button area.*
- void [appendTab](#) (const QIcon &pic, int id=-1, const QString &text=QString())  
*append a new tab to the tab area.*
- [DMultiTabBarButton](#) \* **button** (int id) const  
*get a pointer to a button within the button area identified by its ID*
- bool **isTabRaised** (int id) const  
*return the state of a tab, identified by its ID*
- Qt::Edge [position](#) () const  
*get the tabbar position.*
- void **removeButton** (int id)  
*remove a button with the given ID*
- void **removeTab** (int id)  
*remove a tab with a given ID*
- void [setPosition](#) (Qt::Edge pos)  
*set the real position of the widget.*
- void **setStyle** ([TextStyle](#) style)  
*set the display style of the tabs*
- void [setTab](#) (int id, bool state)  
*set a tab to "raised"*
- [DMultiTabBarTab](#) \* **tab** (int id) const  
*get a pointer to a tab within the tab area, identified by its ID*
- [TextStyle](#) [tabStyle](#) () const  
*get the display style of the tabs*

## Public Member Functions inherited from [Digikam::StateSavingObject](#)

- [StateSavingObject](#) (QObject \*const host)  
*Constructor.*
- virtual ~**StateSavingObject** ()  
*Destructor.*
- [StateSavingDepth](#) [getStateSavingDepth](#) () const  
*Returns the depth used for state saving or loading.*
- void **loadState** ()  
*Invokes loading the class' state.*
- void **saveState** ()  
*Invokes saving the class' state.*
- virtual void [setConfigGroup](#) (const KConfigGroup &group)  
*Sets a dedicated config group that will be used to store and reload the state from.*
- virtual void [setEntryPrefix](#) (const QString &prefix)  
*Define a prefix that will be used for every entry in the config group.*
- void [setStateSavingDepth](#) (const [StateSavingDepth](#) depth)  
*Sets the depth used for state saving or loading.*

### Protected Member Functions

- void [doLoadState](#) () override  
*load the last view state from disk - called by [StateSavingObject::loadState\(\)](#)*
- void [doSaveState](#) () override  
*save the view state to disk - called by [StateSavingObject::saveState\(\)](#)*

### Protected Member Functions inherited from [Digikam::Sidebar](#)

- void [doLoadState](#) () override  
*Load the last view state from disk - called by [StateSavingObject::loadState\(\)](#)*
- void [doSaveState](#) () override  
*Save the view state to disk - called by [StateSavingObject::saveState\(\)](#)*

### Protected Member Functions inherited from [Digikam::DMultiTabBar](#)

- virtual void [fontChange](#) (const QFont &)
- void [updateSeparator](#) ()

### Protected Member Functions inherited from [Digikam::StateSavingObject](#)

- QString [entryName](#) (const QString &base) const  
*Always use this method to create config group entry names.*
- KConfigGroup [getConfigGroup](#) () const  
*Returns the config group that must be used for state saving and loading.*

### Additional Inherited Members

### Public Types inherited from [Digikam::DMultiTabBar](#)

- enum [TextStyle](#) { [ActiveIconText](#) = 0 , [AllIconsText](#) = 2 }
- The list of available styles for [DMultiTabBar](#).*

### Public Types inherited from [Digikam::StateSavingObject](#)

- enum [StateSavingDepth](#) { [INSTANCE](#) , [DIRECT\\_CHILDREN](#) , [RECURSIVE](#) }
- This enum defines the "depth" of the [StateSavingObject::loadState\(\)](#) and [StateSavingObject::saveState\(\)](#) methods.*

## 9.757.1 Member Function Documentation

### 9.757.1.1 [applySettings\(\)](#)

```
void Digikam::ImportItemPropertiesSideBarImport::applySettings ( )
```

**9.757.1.2 doLoadState()**

```
void Digikam::ImportItemPropertiesSideBarImport::doLoadState ( ) [override], [protected],  
[virtual]
```

Implements [Digikam::StateSavingObject](#).

**9.757.1.3 doSaveState()**

```
void Digikam::ImportItemPropertiesSideBarImport::doSaveState ( ) [override], [protected],  
[virtual]
```

Implements [Digikam::StateSavingObject](#).

## 9.758 Digikam::ImportItemPropertiesTab Class Reference

Inheritance diagram for Digikam::ImportItemPropertiesTab:

### Public Member Functions

### 9.759.1 Member Function Documentation

#### 9.759.1.1 `checkIndex()`

```
bool Digikam::ImportLockOverlay::checkIndex (
    const QModelIndex & index ) const [override], [protected], [virtual]
```

The default implementation returns true.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.759.1.2 createWidget()

```
QWidget * Digikam::ImportLockOverlay::createWidget ( ) [override], [protected], [virtual]
```

When creating the object, pass [parentWidget\(\)](#) as parent widget. Ownership of the object is passed. It will be deleted in [setActive\(false\)](#).

Implements [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.759.1.3 setActive()

```
void Digikam::ImportLockOverlay::setActive (
    bool active ) [override], [protected], [virtual]
```

If active is false, this will delete the widget and disconnect all signal from model and view to this object (!)

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.759.1.4 slotEntered()

```
void Digikam::ImportLockOverlay::slotEntered (
    const QModelIndex & index ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.759.1.5 visualChange()

```
void Digikam::ImportLockOverlay::visualChange ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemDelegateOverlay](#).

## 9.760 Digikam::ImportNormalDelegate Class Reference

Inheritance diagram for Digikam::ImportNormalDelegate:

### Public Member Functions

- **ImportNormalDelegate** ([ImportCategorizedView](#) \*const parent)

## Public Member Functions inherited from [Digikam::ImportDelegate](#)

- `QAbstractItemView * m_view` = nullptr

## 9.763.1 Member Function Documentation

### 9.763.1.1 `createWidget()`

```
QWidget * Digikam::ImportRatingOverlay::createWidget ( ) [override], [protected], [virtual]
```

When creating the object, pass [parentWidget\(\)](#) as parent widget. Ownership of the object is passed. It will be deleted in [setActive\(false\)](#).

Implements [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.763.1.2 `hide()`

```
void Digikam::ImportRatingOverlay::hide ( ) [override], [protected], [virtual]
```

Default implementation [hide\(\)](#)s `m_widget`.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.763.1.3 `setActive()`

```
void Digikam::ImportRatingOverlay::setActive (
    bool active ) [override], [protected], [virtual]
```

If active is false, this will delete the widget and disconnect all signal from model and view to this object (!)

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.763.1.4 `slotEntered()`

```
void Digikam::ImportRatingOverlay::slotEntered (
    const QModelIndex & index ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.763.1.5 visualChange()

```
void Digikam::ImportRatingOverlay::visualChange ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemDelegateOverlay](#).

### 9.763.1.6 widgetEnterEvent()

```
void Digikam::ImportRatingOverlay::widgetEnterEvent ( ) [override], [protected], [virtual]
```

QEvent::Leave event for the widget is received. The default implementation does nothing.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.763.1.7 widgetLeaveEvent()

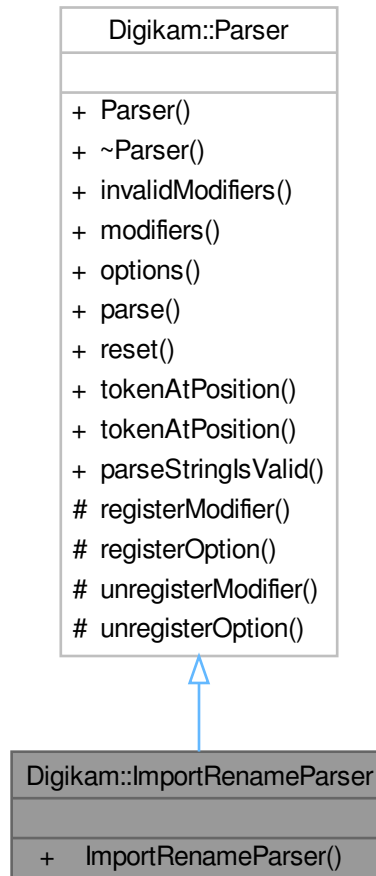

```
void Digikam::ImportRatingOverlay::widgetLeaveEvent ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

- QAbstractItemView \* [m\\_view](#) = nullptr

## 9.765.1 Member Function Documentation

### 9.765.1.1 [checkIndex\(\)](#)

```
bool Digikam::ImportRotateOverlay::checkIndex (
    const QModelIndex & index ) const [override], [protected], [virtual]
```

The default implementation returns true.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.765.1.2 [createButton\(\)](#)

```
ItemViewHoverButton * Digikam::ImportRotateOverlay::createButton ( ) [override], [protected],
[virtual]
```

Pass view() as parent.

Implements [Digikam::HoverButtonDelegateOverlay](#).

### 9.765.1.3 [setActive\(\)](#)

```
void Digikam::ImportRotateOverlay::setActive (
    bool active ) [override], [virtual]
```

Reimplemented from [Digikam::HoverButtonDelegateOverlay](#).

#### 9.765.1.4 updateButton()

```
void Digikam::ImportRotateOverlay::updateButton (
    const QModelIndex & index ) [override], [protected], [virtual]
```

Reposition your button here, adjust and store state.

Implements [Digikam::HoverButtonDelegateOverlay](#).

#### 9.765.1.5 widgetEnterEvent()

```
void Digikam::ImportRotateOverlay::widgetEnterEvent ( ) [override], [protected], [virtual]
```

QEvent::Leave event for the widget is received. The default implementation does nothing.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

#### 9.765.1.6 widgetLeaveEvent()

```
void Digikam::ImportRotateOverlay::widgetLeaveEvent ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

## 9.766.1 Member Function Documentation

### 9.766.1.1 icon()

```
QIcon Digikam::ImportRotateOverlayButton::icon ( ) [override], [protected], [virtual]
```

Will be queried again on toggle.

Implements [Digikam::ItemViewHoverButton](#).

### 9.766.1.2 sizeHint()

```
QSize Digikam::ImportRotateOverlayButton::sizeHint ( ) const [override], [virtual]
```

Implements [Digikam::ItemViewHoverButton](#).

### 9.766.1.3 updateToolTip()

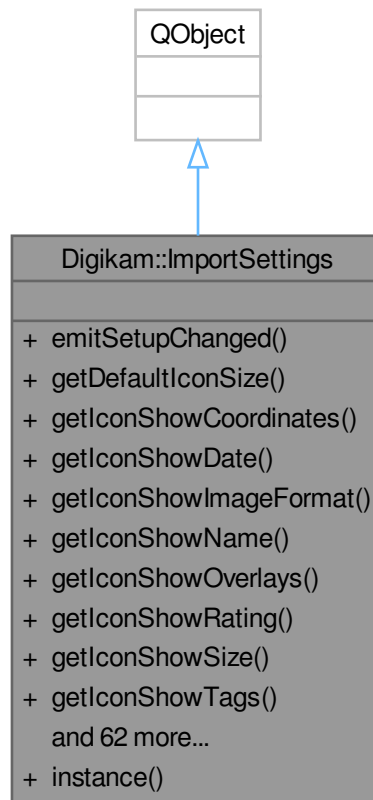

```
void Digikam::ImportRotateOverlayButton::updateToolTip ( ) [override], [protected], [virtual]
```

Will be called again on state change.

Reimplemented from [Digikam::ItemViewHoverButton](#).

## 9.768.1 Member Function Documentation

### 9.768.1.1 `camItemInfosSorted()`

```
QList< CamItemInfo > Digikam::ImportSortFilterModel::camItemInfosSorted ( ) const
```

If you do not need a sorted list, use [ImportItemModel](#)'s `camItemInfo()` method.

### 9.768.1.2 `importFilterModel()`

```
ImportFilterModel * Digikam::ImportSortFilterModel::importFilterModel ( ) const [virtual]
```

Reimplemented in [Digikam::ImportFilterModel](#).

### 9.768.1.3 `mapToSourceImportModel()`

```
QModelIndex Digikam::ImportSortFilterModel::mapToSourceImportModel (
    const QModelIndex & proxyIndex ) const
```

Mentioned indexes returned come from the source import image model.

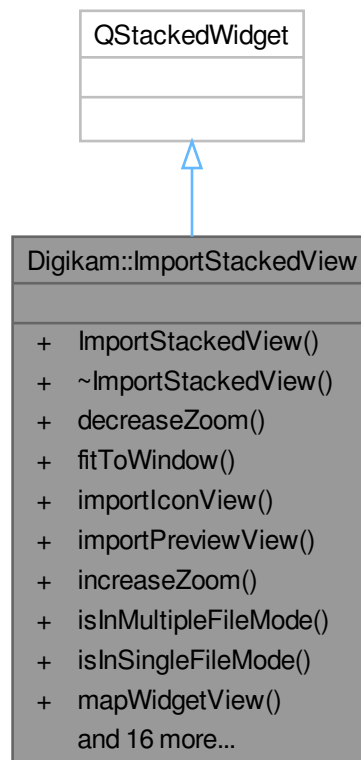

### 9.768.1.4 `setDirectSourceImportModel()`

```
void Digikam::ImportSortFilterModel::setDirectSourceImportModel (
    ImportItemModel *const sourceModel ) [protected], [virtual]
```

Reimplemented in [Digikam::ImportFilterModel](#).

## 9.769 Digikam::ImportStackedView Class Reference

Inheritance diagram for Digikam::ImportStackedView:

### Public Types

## 9.769.1 Member Enumeration Documentation

### 9.769.1.1 StackedViewMode

```
enum Digikam::ImportStackedView::StackedViewMode
```

#### Enumerator

PreviewCameraMode	previewing the set of items on the camera
-------------------	---

## 9.770 Digikam::ImportThumbnailBar Class Reference

Inheritance diagram for Digikam::ImportThumbnailBar:

### Public Slots

- void **assignRating** (const QList< QModelIndex > &index, int rating)
- void **slotDockLocationChanged** (Qt::DockWidgetArea area)

## Public Slots inherited from [Digikam::ImportCategorizedView](#)

- void **hintAt** (const [CamItemInfo](#) &info)
  - Does something to gain attention for info, but not changing current selection.*
- void **setCurrentInfo** (const [CamItemInfo](#) &info)
  - Set as current item the item identified by the [CamItemInfo](#).*
- void **setCurrentUrl** (const QUrl &url)
  - Set as current item the item identified by its file url.*
- void **setCurrentWhenAvailable** (qulonglong camItemId)
  - Scroll the view to the given item when it becomes available.*
- void **setSelectedCamItemInfos** (const QList< [CamItemInfo](#) > &infos)
  - Set selected items.*
- void **setSelectedUrls** (const QList< QUrl > &urlList)
  - Set selected items identified by their file urls.*
- void **setThumbnailSize** (int size)

## Public Slots inherited from [Digikam::ItemViewCategorized](#)

- void **copy** () override
- void **cut** () override
- void **hideIndexNotification** ()
- void **paste** () override
- void **showIndexNotification** (const QModelIndex &index, const QString &message)

## Public Slots inherited from [Digikam::DCategorizedView](#)

- void **reset** () override

## Public Member Functions

- **ImportThumbnailBar** (QWidget \*const parent=nullptr)
- QModelIndex **firstIndex** () const
- void **installOverlays** ()
- QModelIndex **lastIndex** () const
- QModelIndex **nextIndex** (const QModelIndex &index) const
- QModelIndex **previousIndex** (const QModelIndex &index) const
- void **setFlow** (QListView::Flow newFlow)
- void **setModelsFiltered** ([ImportItemModel](#) \*model, [ImportSortFilterModel](#) \*filterModel)
  - This installs a duplicate filter model, if the [ImportItemModel](#) may contain duplicates.*
- void **setScrollBarPolicy** (Qt::ScrollBarPolicy policy)
  - Sets the policy always for the one scroll bar which is relevant, depending on orientation.*

## Public Member Functions inherited from [Digikam::ImportCategorizedView](#)

- **ImportCategorizedView** (QWidget \*const parent=nullptr)
- void **addOverlay** (ItemDelegateOverlay \*overlay, ImportDelegate \*delegate=nullptr)
  - Add and remove an overlay.*
- void **addSelectionOverlay** (ImportDelegate \*delegate=nullptr)
- QList< [CamItemInfo](#) > **camItemInfos** () const
- [CamItemInfo](#) **currentInfo** () const
- QUrl **currentUrl** () const
- [ImportDelegate](#) \* **delegate** () const
- QItemSelectionModel \* **getSelectionModel** () const
- [ImportFilterModel](#) \* **importFilterModel** () const
  - Returns any [ImportFilterModel](#) in chain.*
- [ImportItemModel](#) \* **importItemModel** () const
- [ImportSortFilterModel](#) \* **importSortFilterModel** () const
- [ImportThumbnailModel](#) \* **importThumbnailModel** () const
  - Returns 0 if the [ImportItemModel](#) is not an [ImportThumbnailModel](#).*
- [CamItemInfo](#) **nextInfo** (const [CamItemInfo](#) &info)
- [CamItemInfo](#) **nextInOrder** (const [CamItemInfo](#) &startingPoint, int nth)
  - Returns the n-th info after the given one.*
- [CamItemInfo](#) **previousInfo** (const [CamItemInfo](#) &info)
- void **removeOverlay** (ItemDelegateOverlay \*overlay)
- QList< [CamItemInfo](#) > **selectedCamItemInfos** () const
- QList< [CamItemInfo](#) > **selectedCamItemInfosCurrentFirst** () const
- QList< QUrl > **selectedUrls** () const
- void **setModels** ([ImportItemModel](#) \*model, [ImportSortFilterModel](#) \*filterModel)
- virtual void **setThumbnailSize** (const [ThumbnailSize](#) &size)
- [ThumbnailSize](#) **thumbnailSize** () const
- void **toIndex** (const QUrl &url)
  - Selects the index as current and scrolls to it.*
- QList< QUrl > **urls** () const

## Public Member Functions inherited from [Digikam::ItemViewCategorized](#)

- **ItemViewCategorized** (QWidget \*const parent=nullptr)
- void **awayFromSelection** ()

- virtual void **cut** ()
- virtual void **paste** ()

### Protected Member Functions

- bool **event** (QEvent \*) override
- void **slotSetupChanged** () override

## Protected Member Functions inherited from [Digikam::ImportCategorizedView](#)

- virtual void **activated** (const [CamItemInfo](#) &info, Qt::KeyboardModifiers modifiers)
  - Reimplement these in a subclass.*
- void **currentChanged** (const QModelIndex &index, const QModelIndex &previous) override
- [AbstractItemDragDropHandler](#) \* **dragDropHandler** () const override
  - You need to implement these three methods Returns the drag drop handler.*
- QSortFilterProxyModel \* **filterModel** () const override
  - reimplemented from parent class*
- void **indexActivated** (const QModelIndex &index, Qt::KeyboardModifiers modifiers) override
- QModelIndex **nextIndexHint** (const QModelIndex &indexToAnchor, const QItemSelectionRange &removed) const override
  - Assuming the given indexes would be removed (hypothetically!), return the index to be selected instead, starting from anchor.*
- void **paintEvent** (QPaintEvent \*e) override
- void **selectionChanged** (const QItemSelection &, const QItemSelection &) override
- void **setItemDelegate** ([ImportDelegate](#) \*delegate)
- void **showContextMenuOnIndex** (QContextMenuEvent \*event, const QModelIndex &index) override
  - Reimplement these in a subclass.*
- virtual void **showContextMenuOnInfo** (QContextMenuEvent \*event, const [CamItemInfo](#) &info)
- void **updateGeometries** () override

## Protected Member Functions inherited from [Digikam::ItemViewCategorized](#)

- void **contextMenuEvent** (QContextMenuEvent \*event) override
  - reimplemented from parent class*
- bool **decodelsCutSelection** (const QMimeData \*mimeData)
- void **encodelsCutSelection** (QMimeData \*mime, bool isCutSelection)
- QModelIndex **indexForCategoryAt** (const QPoint &pos) const
  - Returns an index that is representative for the category at position pos.*
- void **keyPressEvent** (QKeyEvent \*event) override
- void **leaveEvent** (QEvent \*event) override
- QModelIndex **mapIndexForDragDrop** (const QModelIndex &index) const override
  - Note: pure virtual [dragDropHandler\(\)](#) still open from [DragDropViewImplementation](#).*
- void **mouseMoveEvent** (QMouseEvent \*event) override
- void **mousePressEvent** (QMouseEvent \*event) override
- void **mouseReleaseEvent** (QMouseEvent \*event) override
- QModelIndex **moveCursor** (CursorAction cursorAction, Qt::KeyboardModifiers modifiers) override
- QPixmap **pixmapForDrag** (const QList< QModelIndex > &indexes) const override
  - Creates a pixmap for dragging the given indexes.*
- void **reset** () override
- void **resizeEvent** (QResizeEvent \*e) override
- void **rowsAboutToBeRemoved** (const QModelIndex &parent, int start, int end) override
- void **rowsInserted** (const QModelIndex &parent, int start, int end) override
- void **rowsRemoved** (const QModelIndex &parent, int start, int end) override
- void **selectionChanged** (const QItemSelection &, const QItemSelection &) override
- void **setItemDelegate** ([DItemDelegate](#) \*delegate)
- void **setToolTip** ([ItemViewToolTip](#) \*tip)
- virtual void **showContextMenu** (QContextMenuEvent \*event)
- virtual bool **showToolTip** (const QModelIndex &index, QStyleOptionViewItem &option, QHelpEvent \*e=nullptr)
  - Provides default behavior, can reimplement in a subclass.*
- void **updateDelegateSizes** ()
- void **userInteraction** ()
- bool **viewportEvent** (QEvent \*event) override
- void **wheelEvent** (QWheelEvent \*event) override

## Protected Member Functions inherited from [Digikam::DCategorizedView](#)

- void **dragLeaveEvent** (QDragLeaveEvent \*event) override
- void **dragMoveEvent** (QDragMoveEvent \*event) override
- void **dropEvent** (QDropEvent \*event) override
- void **leaveEvent** (QEvent \*event) override
- void **mouseMoveEvent** (QMouseEvent \*event) override

## 9.770.1 Member Function Documentation

### 9.770.1.1 setModelsFiltered()

```
void Digikam::ImportThumbnailBar::setModelsFiltered (
    ImportItemModel * model,
    ImportSortFilterModel * filterModel )
```

Otherwise, just use setModels().

### 9.770.1.2 slotSetupChanged()

```
void Digikam::ImportThumbnailBar::slotSetupChanged ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemViewCategorized](#).

## 9.771 Digikam::ImportThumbnailDelegate Class Reference

Inheritance diagram for Digikam::ImportThumbnailDelegate:

### Public Member Functions

- **ImportThumbnailDelegate** (**ImportCategorizedView** \*const parent)
- bool **acceptsActivation** (const QPoint &pos, const QRect &visualRect, const QModelIndex &index, QRect \*activationRect) const override

- int **maximumSize** () const  
*Returns the minimum or maximum viewport size in the limiting dimension, width or height, depending on current flow.*
- int **minimumSize** () const
- void **setDefaultViewOptions** (const QStyleOptionViewItem &option) override  
*Style option with standard values to use for cached rendering.*
- void **setFlow** (QListView::Flow flow)

## Public Member Functions inherited from [Digikam::ImportDelegate](#)

- **ImportDelegate** (QWidget \*const parent)

## 9.771.1 Member Function Documentation

### 9.771.1.1 acceptsActivation()

```
bool Digikam::ImportThumbnailDelegate::acceptsActivation (
    const QPoint & pos,
    const QRect & visualRect,
    const QModelIndex & index,
    QRect * activationRect ) const [override], [virtual]
```

Reimplemented from [Digikam::ImportDelegate](#).

### 9.771.1.2 setDefaultViewOptions()

```
void Digikam::ImportThumbnailDelegate::setDefaultViewOptions (
    const QStyleOptionViewItem & option ) [override], [virtual]
```

option.rect shall be the viewport rectangle. Call on resize, font change.

Reimplemented from [Digikam::ImportDelegate](#).

### 9.771.1.3 updateContentWidth()

```
void Digikam::ImportThumbnailDelegate::updateContentWidth ( ) [override], [protected], [virtual]
```

This is the maximum width of all content rectangles, typically excluding margins on both sides.

Reimplemented from [Digikam::ImportDelegate](#).

### 9.771.1.4 updateRects()

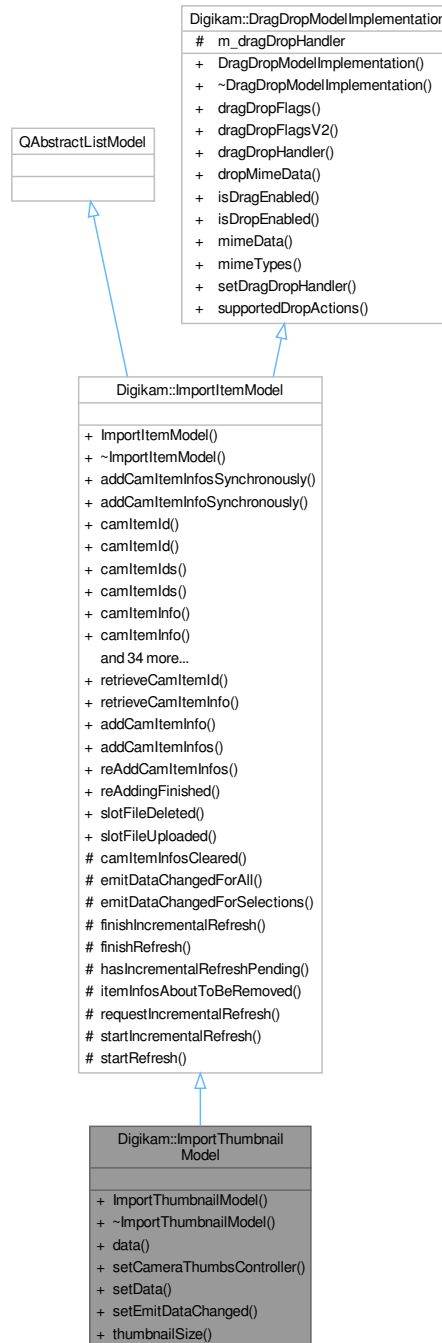

```
void Digikam::ImportThumbnailDelegate::updateRects ( ) [override], [protected], [virtual]
```

The paint() method operates depending on these rects.

Implements [Digikam::ImportDelegate](#).

## 9.772 Digikam::ImportThumbnailModel Class Reference

Inheritance diagram for Digikam::ImportThumbnailModel:

### Signals

- void **thumbnailAvailable** (const QModelIndex &index, int requestedSize)
- void **thumbnailFailed** (const QModelIndex &index, int requestedSize)

## Signals inherited from [Digikam::ImportItemModel](#)

- void [allRefreshingFinished](#) ()  
*Signals that the model has finished currently with all scheduled refreshing, full or incremental, and all preprocessing.*
- void [itemInfosAboutToBeAdded](#) (const QList< [CamItemInfo](#) > &infos)  
*Informs that ItemInfos will be added to the model.*
- void [itemInfosAboutToBeRemoved](#) (const QList< [CamItemInfo](#) > &infos)  
*Informs that CamItemInfos will be removed from the model.*
- void [itemInfosAdded](#) (const QList< [CamItemInfo](#) > &infos)  
*Informs that ItemInfos have been added to the model.*
- void [itemInfosRemoved](#) (const QList< [CamItemInfo](#) > &infos)  
*Informs that CamItemInfos have been removed from the model.*
- void [preprocess](#) (const QList< [CamItemInfo](#) > &infos)  
*Connect to this signal only if you are the current preprocessor.*
- void [processAdded](#) (const QList< [CamItemInfo](#) > &infos)
- void [readyForIncrementalRefresh](#) ()  
*Signals that the model is right now ready to start an incremental refresh.*

## Public Member Functions

- [ImportThumbnailModel](#) (QObject \*const parent)  
*This model provides thumbnail loading, it uses the Camera Controller to retrieve thumbnails for CamItemInfos.*
- QVariant [data](#) (const QModelIndex &index, int role=Qt::DisplayRole) const override  
*Handles the ThumbnailRole.*
- void [setCameraThumbsController](#) ([CameraThumbsCtrl](#) \*const thumbsCtrl) override  
*Sets the camera thumbs controller which is used to get the thumbnails for item infos.*
- bool [setData](#) (const QModelIndex &index, const QVariant &value, int role=Qt::DisplayRole) override  
*You can override the current thumbnail size by giving an integer value for ThumbnailRole.*
- void [setEmitDataChanged](#) (bool emitSignal)  
*Enable emitting dataChanged() when a thumbnail becomes available.*
- [ThumbnailSize](#) [thumbnailSize](#) () const  
*Get the thumbnail size.*

## Public Member Functions inherited from [Digikam::ImportItemModel](#)

- [ImportItemModel](#) (QObject \*const parent=nullptr)
- void [addCamItemInfosSynchronously](#) (const Digikam::CamItemInfoList &infos)
- void [addCamItemInfoSynchronously](#) (const [CamItemInfo](#) &info)  
*addCamItemInfo() is asynchronous if a preprocessor is set.*
- qlonglong [camItemId](#) (const QModelIndex &index) const
- qlonglong [camItemId](#) (int row) const
- QList< qlonglong > [camItemIds](#) () const
- QList< qlonglong > [camItemIds](#) (const QList< QModelIndex > &indexes) const
- [CamItemInfo](#) [camItemInfo](#) (const QModelIndex &index) const  
*Returns the [CamItemInfo](#) object, reference from the underlying data pointed to by the index.*
- [CamItemInfo](#) [camItemInfo](#) (const QUrl &fileUrl) const
- [CamItemInfo](#) [camItemInfo](#) (int row) const  
*Returns the [CamItemInfo](#) object, reference from the underlying data of the given row (parent is the invalid QModelIndex, column is 0).*
- [CamItemInfo](#) & [camItemInfoRef](#) (const QModelIndex &index) const
- [CamItemInfo](#) & [camItemInfoRef](#) (int row) const

- `QList< CamItemInfo > camItemInfos ()` const
- `CamItemInfoList camItemInfos (const QList< QModelIndex > &indexes)` const
- `QList< CamItemInfo > camItemInfos (const QUrl &fileUrl)` const
- `void clearCamItemInfos ()`
  - Clears the CamItemInfos and resets the model.*
- `QVariant data (const QModelIndex &index, int role)` const override
- `Qt::ItemFlags flags (const QModelIndex &index)` const override
- `bool hasImage (const CamItemInfo &info)` const
- `bool hasImage (qulonglong id)` const
- `QVariant headerData (int section, Qt::Orientation orientation, int role)` const override
- `QModelIndex index (int row, int column, const QModelIndex &parent)` const override
- `QList< QModelIndex > indexesForCamItemId (qulonglong id)` const
- `QList< QModelIndex > indexesForCamItemInfo (const CamItemInfo &info)` const
- `QList< QModelIndex > indexesForUrl (const QUrl &fileUrl)` const
- `QModelIndex indexForCamItemId (qulonglong id)` const
- `QModelIndex indexForCamItemInfo (const CamItemInfo &info)` const
  - Return the index of a given [CamItemInfo](#), if it exists in the model.*
- `QModelIndex indexForUrl (const QUrl &fileUrl)` const
  - Returns the index or [CamItemInfo](#) object from the underlying data for the given file url.*
- `bool isEmpty ()` const
- `bool isRefreshing ()` const
  - Returns true if this model is currently refreshing.*
- `bool keepsFileUrlCache ()` const
- `int numberOfIndexesForCamItemId (qulonglong id)` const
- `int numberOfIndexesForCamItemInfo (const CamItemInfo &info)` const
- `void removeCamItemInfo (const CamItemInfo &info)`
- `void removeCamItemInfos (const QList< CamItemInfo > &infos)`
- `void removeIndex (const QModelIndex &index)`
  - Remove the given infos or indexes directly from the model.*
- `void removeIndexes (const QList< QModelIndex > &indexes)`
- `int rowCount (const QModelIndex &parent)` const override
  - QAbstractListModel implementation.*
- `void setCamItemInfos (const CamItemInfoList &infos)`
  - Clears and adds infos.*
- `void setKeepsFileUrlCache (bool keepCache)`
  - If a cache is kept, lookup by file path is fast, without a cache it is O(n).*
- `DECLARE_MODEL_DRAG_DROP_METHODS void setSendRemovalSignals (bool send)`
  - DragDrop methods.*
- `QList< CamItemInfo > uniqueCamItemInfos ()` const

## Public Member Functions inherited from [Digikam::DragDropModelImplementation](#)

- `DragDropModelImplementation ()`=default
  - A class providing a sample implementation for a QAbstractItemModel redirecting drag-and-drop support to a handler.*
- `virtual Qt::ItemFlags dragDropFlags (const QModelIndex &index)` const
  - Call from your flags() method, adding the relevant drag drop flags.*
- `Qt::ItemFlags dragDropFlagsV2 (const QModelIndex &index)` const
  - This is an alternative approach to [dragDropFlags\(\)](#).*
- `AbstractItemDragDropHandler * dragDropHandler ()` const
- `bool dropMimeData (const QMimeData *, Qt::DropAction, int, int, const QModelIndex &)`
- `virtual bool isDragEnabled (const QModelIndex &index)` const
- `virtual bool isDropEnabled (const QModelIndex &index)` const

- `QMimeType * mimeType` (const `QModelIndexList &indexes`) const
- `QStringList mimeTypees` () const
- void **setDragDropHandler** (`AbstractItemDragDropHandler *handler`)  
*Set a drag drop handler.*
- `Qt::DropActions supportedDropActions` () const  
*Implements the relevant `QAbstractItemModel` methods for drag and drop.*

### Additional Inherited Members

### Public Types inherited from `Digikam::ImportItemModel`

- enum `ImportItemModelRoles` {  
`ImportItemModelPointerRole` = `Qt::UserRole` , `ImportItemModelInternalId` = `Qt::UserRole` + 1 ,  
`ThumbnailRole` = `Qt::UserRole` + 2 , `ExtraDataRole` = `Qt::UserRole` + 3 ,  
`ExtraDataDuplicateCount` = `Qt::UserRole` + 6 , `FilterModelRoles` = `Qt::UserRole` + 100 }

### Public Slots inherited from `Digikam::ImportItemModel`

- void **addCamItemInfo** (const `CamItemInfo &info`)
- void **addCamItemInfos** (const `CamItemInfoList &infos`)
- void **reAddCamItemInfos** (const `CamItemInfoList &infos`)
- void **reAddingFinished** ()
- void **slotFileDeleted** (const `QString &folder`, const `QString &file`, bool status)
- void **slotFileUploaded** (const `CamItemInfo &info`)

### Static Public Member Functions inherited from `Digikam::ImportItemModel`

- static `qulonglong retrieveCamItemId` (const `QModelIndex &index`)
- static `CamItemInfo retrieveCamItemInfo` (const `QModelIndex &index`)  
*Retrieve the `CamItemInfo` object from the `data()` function of the given index. The index may be from a `QSortFilterProxyModel` as long as an `ImportItemModel` is at the end.*

### Protected Member Functions inherited from `Digikam::ImportItemModel`

- virtual void **camItemInfosCleared** ()  
*Called when the internal storage is cleared.*
- void **emitDataChangedForAll** ()
- void **emitDataChangedForSelections** (const `QItemSelection &selection`)
- void **finishIncrementalRefresh** ()
- void **finishRefresh** ()
- bool **hasIncrementalRefreshPending** () const
- virtual void **itemInfosAboutToBeRemoved** (int, int)  
*Called before `rowsAboutToBeRemoved`.*
- void **requestIncrementalRefresh** ()  
*As soon as the model is ready to start an incremental refresh, the signal `readyForIncrementalRefresh()` will be emitted.*
- void **startIncrementalRefresh** ()  
*Starts an incremental refresh operation.*
- void **startRefresh** ()  
*Subclasses that add `CamItemInfos` in batches shall call `startRefresh()` when they start sending batches and finish `Refresh()` when they have finished.*

## Protected Attributes inherited from [Digikam::DragDropModelImplementation](#)

- [AbstractItemDragDropHandler](#) \* `m_dragDropHandler` = nullptr

### 9.772.1 Constructor & Destructor Documentation

#### 9.772.1.1 ImportThumbnailModel()

```
Digikam::ImportThumbnailModel::ImportThumbnailModel (
    QObject *const parent ) [explicit]
```

It also provides preloading of thumbnails, and caching facility. Thumbnails size can be adjusted.

### 9.772.2 Member Function Documentation

#### 9.772.2.1 data()

```
QVariant Digikam::ImportThumbnailModel::data (
    const QModelIndex & index,
    int role = Qt::DisplayRole ) const [override]
```

If the pixmap is available, returns it in the QVariant. If it still needs to be loaded, returns a null QVariant and emits `thumbnailAvailable()` as soon as it is available.

#### 9.772.2.2 setCameraThumbsController()

```
void Digikam::ImportThumbnailModel::setCameraThumbsController (
    CameraThumbsCtrl *const thumbsCtrl ) [override], [virtual]
```

Reimplemented from [Digikam::ImportItemModel](#).

#### 9.772.2.3 setData()

```
bool Digikam::ImportThumbnailModel::setData (
    const QModelIndex & index,
    const QVariant & value,
    int role = Qt::DisplayRole ) [override]
```

Set a null QVariant to use the thumbnail size set by `setThumbnailSize()` again. The index given here is ignored for this purpose.

#### 9.772.2.4 setEmitDataChanged()

```
void Digikam::ImportThumbnailModel::setEmitDataChanged (
    bool emitSignal )
```

The `thumbnailAvailable()` signal will be emitted in any case. Default is true.

## 9.773 Digikam::ImportUI Class Reference

- [PAlbum](#) \* **srcAlbum** () const
- QList< int > **srcAlbumIds** () const
- DTrashItemInfoList **trashItems** () const

## 9.785 Digikam::IOJobsManager Class Reference

Inheritance diagram for Digikam::IOJobsManager:

### Public Member Functions

- `IOJobsThread * buildCollectionTrashCounters ()`  
*Starts a thread for count trash items for all collections.*
- `IOJobsThread * startDTrashItemsListingForCollection (const QString &collectionPath)`  
*Starts a thread for listing items inside trash for specific collection.*
- `IOJobsThread * startIOJobs (IOJobData *const data)`  
*startIOJobs: Starts a thread to copy, move, delete or rename items*

### Static Public Member Functions

- static `IOJobsManager * instance ()`  
*instance: returns the singleton of IO Jobs Manager*

### Friends

- class `IOJobsManagerCreator`

## 9.785.1 Member Function Documentation

### 9.785.1.1 buildCollectionTrashCounters()

`IOJobsThread * Digikam::IOJobsManager::buildCollectionTrashCounters ()`

#### Returns

`IOJobsThread` pointer for signal/slot connection

### 9.785.1.2 instance()

```
IOJobsManager * Digikam::IOJobsManager::instance ( ) [static]
```

#### Returns

[IOJobsManager](#) global instance

### 9.785.1.3 startDTrashItemsListingForCollection()

```
IOJobsThread * Digikam::IOJobsManager::startDTrashItemsListingForCollection (
    const QString & collectionPath )
```

#### Parameters

<i>collectionPath</i>	the path for collection to list items for it's trash
-----------------------	--

#### Returns

[IOJobsThread](#) pointer for signal/slot connection

### 9.785.1.4 startIOJobs()

```
IOJobsThread * Digikam::IOJobsManager::startIOJobs (
    IOJobData *const data )
```

#### Parameters

<i>data</i>	<a href="#">IOJobData</a> container with source and destination url
-------------	---

#### Returns

[IOJobsThread](#) pointer for signal/slot connection

## 9.786 Digikam::IOJobsThread Class Reference

Inheritance diagram for Digikam::IOJobsThread:

### Public Slots

- void **slotCancel** ()  
*cancels thread execution*

## Signals

- void **collectionTrashItemInfo** (const [DTrashItemInfo](#) &trashItemInfo)
- void **signalFinished** ()
- void **signalOneProcessed** (const [QUrl](#) &url)
- void **signalRenameFailed** (const [QUrl](#) &url)
- void **signalTrashCountersMap** (const [QMap](#)< [QString](#), int > &counterMap)

## Public Member Functions

- **IOJobsThread** ([QObject](#) \*const parent)
- void **buildTrashCounters** ()  
*creates a job for count trash items from all collections*
- void **copyOrMove** ([IOJobData](#) \*const data)  
*Starts a number of jobs to copy or move source files to destination.*
- void **deleteFiles** ([IOJobData](#) \*const data)  
*Starts a number of jobs to delete multiple files.*
- void **emptyDTrashItems** ([IOJobData](#) \*const data)  
*creates a job for every item to delete from collection trash*
- [QStringList](#) & **errorsList** () const
- bool **hasErrors** () const  
*hasErrors*
- bool **isCanceled** () const  
*isCanceled*
- [IOJobData](#) \* **jobData** () const
- void **listDTrashItems** (const [QString](#) &collectionPath)  
*Starts a job for listing trash items in a collection.*
- void **renameFile** ([IOJobData](#) \*const data)  
*Starts one job to rename a file to a new name.*
- void **restoreDTrashItems** ([IOJobData](#) \*const data)  
*creates a job for every item to restore back to album*

## Public Member Functions inherited from [Digikam::ActionThreadBase](#)

- **ActionThreadBase** ([QObject](#) \*const parent=nullptr)
- void **cancel** (bool isCancel=true)  
*Cancel processing of current jobs under progress.*
- int **maximumNumberOfThreads** () const  
*Return the maximum number of threads used to parallelize collection of job processing.*
- void **setDefaultMaximumNumberOfThreads** ()  
*Reset maximum number of threads used to parallelize collection of job processing to max core detected on computer.*
- void **setMaximumNumberOfThreads** (int n)  
*Adjust maximum number of threads used to parallelize collection of job processing.*

## Additional Inherited Members

## Protected Slots inherited from [Digikam::ActionThreadBase](#)

- void **slotJobFinished** ()

## Protected Member Functions inherited from [Digikam::ActionThreadBase](#)

- void [appendJobs](#) (const [ActionJobCollection](#) &jobs)  
*Append a collection of jobs to process into QThreadPool.*
- bool [isEmpty](#) () const  
*Return true if list of pending jobs to process is empty.*
- int [pendingCount](#) () const  
*Return the number of pending jobs to process.*
- void [run](#) () override  
*Main thread loop used to process jobs in todo list.*

### 9.786.1 Member Function Documentation

#### 9.786.1.1 [copyOrMove\(\)](#)

```
void Digikam::IOJobsThread::copyOrMove (
    IOJobData *const data )
```

##### Parameters

<i>data</i>	IOJobsData container
-------------	----------------------

#### 9.786.1.2 [deleteFiles\(\)](#)

```
void Digikam::IOJobsThread::deleteFiles (
    IOJobData *const data )
```

##### Parameters

<i>data</i>	IOJobsData container
-------------	----------------------

#### 9.786.1.3 [emptyDTrashItems\(\)](#)

```
void Digikam::IOJobsThread::emptyDTrashItems (
    IOJobData *const data )
```

##### Parameters

<i>data</i>	IOJobsData container
-------------	----------------------

#### 9.786.1.4 [errorsList\(\)](#)

```
QStringList & Digikam::IOJobsThread::errorsList ( ) const
```

**Returns**

the current errors list

**9.786.1.5 hasErrors()**

```
bool Digikam::IOJobsThread::hasErrors ( ) const
```

**Returns**

true if string list was not empty

**9.786.1.6 isCanceled()**

```
bool Digikam::IOJobsThread::isCanceled ( ) const
```

**Returns**

true if the thread was interrupted

**9.786.1.7 jobData()**

```
IOJobData * Digikam::IOJobsThread::jobData ( ) const
```

**Returns**

the current data job instance

**9.786.1.8 listDTrashItems()**

```
void Digikam::IOJobsThread::listDTrashItems (
    const QString & collectionPath )
```

**Parameters**

<i>collectionPath</i>	
-----------------------	--

**9.786.1.9 renameFile()**

```
void Digikam::IOJobsThread::renameFile (
    IOJobData *const data )
```

**Parameters**

<i>data</i>	IOJobsData container
-------------	----------------------

### 9.786.1.10 restoreDTrashItems()

```
void Digikam::IOJobsThread::restoreDTrashItems (
    IOJobData *const data )
```

#### Parameters

<i>data</i>	IOJobsData container
-------------	----------------------

## 9.787 Digikam::IptcCoreContactInfo Class Reference

### Public Member Functions

- bool **isEmpty** () const
- bool **isNull** () const
- void **merge** (const [IptcCoreContactInfo](#) &t)
- bool **operator==** (const [IptcCoreContactInfo](#) &t) const

### Public Attributes

## 9.790.1 Member Function Documentation

### 9.790.1.1 `getMetadataTitle()`

```
QString Digikam::IptcWidget::getMetadataTitle ( ) const [override], [virtual]
```

Implements [Digikam::MetadataWidget](#).

### 9.790.1.2 `getTagDescription()`

```
QString Digikam::IptcWidget::getTagDescription (
    const QString & key ) [override], [virtual]
```

Reimplemented from [Digikam::MetadataWidget](#).

### 9.790.1.3 `getTagTitle()`

```
QString Digikam::IptcWidget::getTagTitle (
    const QString & key ) [override], [virtual]
```

Reimplemented from [Digikam::MetadataWidget](#).

### 9.790.1.4 `loadFromURL()`

```
bool Digikam::IptcWidget::loadFromURL (
    const QUrl & url ) [override], [virtual]
```

Implements [Digikam::MetadataWidget](#).

## 9.791 Digikam::ItemAlbumFilterModel Class Reference

Inheritance diagram for Digikam::ItemAlbumFilterModel:

### Public Member Functions

- **ItemAlbumFilterModel** (QObject \*const parent=nullptr)
- void **setItemFilterSettings** (const **ItemFilterSettings** &settings) override

*Changes the current image filter settings and refilters.*

- void **setSourceItemModel** ([ItemAlbumModel](#) \*model)
- [ItemAlbumModel](#) \* **sourceModel** () const

## Public Member Functions inherited from [Digikam::ItemFilterModel](#)

- **ItemFilterModel** (QObject \*const parent=nullptr)
- void **addPrepareHook** ([ItemFilterModelPrepareHook](#) \*const hook)
 

*Add a hook to get added images for preparation tasks before they are added in the model.*
- QVariant **data** (const QModelIndex &index, int role=Qt::DisplayRole) const override
- [GroupItemFilterSettings](#) **groupItemFilterSettings** () const
- [ItemFilterModel](#) \* **imageFilterModel** () const override
 

*Returns this, any chained [ItemFilterModel](#), or 0.*
- [ItemFilterSettings](#) **imageFilterSettings** () const
- [ItemSortSettings](#) **imageSortSettings** () const
- bool **isAllGroupsOpen** () const
- bool **isGroupOpen** (qulonglong group) const
 

*group is identified by the id of its group leader*
- void **removePrepareHook** ([ItemFilterModelPrepareHook](#) \*const hook)
- void **setSendItemInfoSignals** (bool sendSignals)
 

*Enables sending imageInfosAdded and imageInfosAboutToBeRemoved.*
- [DatabaseFields::Set](#) **suggestedWatchFlags** () const
 

*Returns a set of DatabaseFields suggested to set as watch flags on the source [ItemModel](#).*
- [VersionItemFilterSettings](#) **versionItemFilterSettings** () const

## Public Member Functions inherited from [Digikam::ImageSortFilterModel](#)

- **ImageSortFilterModel** (QObject \*const parent=nullptr)
- qulonglong **imageId** (const QModelIndex &index) const
- QList< qulonglong > **imageIds** (const QList< QModelIndex > &indexes) const
- [ItemInfo](#) **imageInfo** (const QModelIndex &index) const
- QList< [ItemInfo](#) > **imageInfos** (const QList< QModelIndex > &indexes) const
- QList< [ItemInfo](#) > **imageInfosSorted** () const
 

*Returns a list of all image infos, sorted according to this model.*
- QModelIndex **indexForImageId** (qulonglong id) const

## 9.791.1 Member Function Documentation

### 9.791.1.1 [compareInfosCategories\(\)](#) [1/2]

```
int Digikam::ItemAlbumFilterModel::compareInfosCategories (
    const ItemInfo & left,
    const ItemInfo & right ) const [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemFilterModel](#).

### 9.791.1.2 [compareInfosCategories\(\)](#) [2/2]

```
int Digikam::ItemAlbumFilterModel::compareInfosCategories (
    const ItemInfo & left,
    const ItemInfo & right,
    const FaceTagsIface & leftFace,
    const FaceTagsIface & rightFace ) const [override], [protected], [virtual]
```

One image may have multiple Faces in it, hence just the [ItemInfo](#) isn't sufficient.

Reimplemented from [Digikam::ItemFilterModel](#).

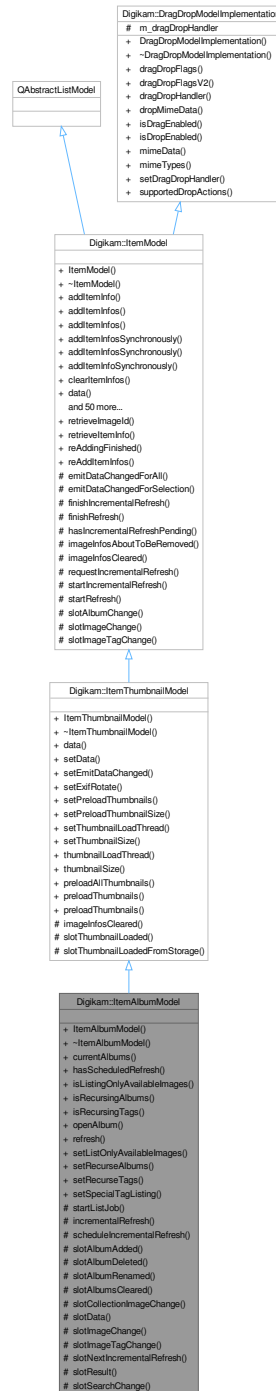

### 9.791.1.3 [setItemFilterSettings\(\)](#)

```
void Digikam::ItemAlbumFilterModel::setItemFilterSettings (
    const ItemFilterSettings & settings ) [override], [virtual]
```

Reimplemented from [Digikam::ItemFilterModel](#).

## 9.792 Digikam::ItemAlbumModel Class Reference

Inheritance diagram for Digikam::ItemAlbumModel:

### Public Slots

- void `openAlbum` (const QList< Album \* > &albums)

Call this method to populate the model with data from the given album.

- void **refresh** ()  
*Reloads the current album.*
- void **setListOnlyAvailableImages** (bool onlyAvailable)
- void **setRecurseAlbums** (bool recursiveListing)
- void **setRecurseTags** (bool recursiveListing)
- void **setSpecialTagListing** (const QString &specialListing)

### Public Slots inherited from [Digikam::ItemThumbnailModel](#)

- void **preloadAllThumbnails** ()
- void **preloadThumbnails** (const QList< [ItemInfo](#) > &)  
*Preload thumbnail for the given infos resp.*
- void **preloadThumbnails** (const QList< QModelIndex > &)

### Public Slots inherited from [Digikam::ItemModel](#)

- void **reAddingFinished** ()
- void **reAddItemInfos** (const QList< [ItemInfo](#) > &infos, const QList< QVariant > &extraValues)

### Public Member Functions

- **ItemAlbumModel** (QWidget \*const parent)
- QList< [Album](#) \* > **currentAlbums** () const
- bool **hasScheduledRefresh** () const
- bool **isListingOnlyAvailableImages** () const
- bool **isRecurringAlbums** () const
- bool **isRecurringTags** () const

### Public Member Functions inherited from [Digikam::ItemThumbnailModel](#)

- **ItemThumbnailModel** (QWidget \*const parent)  
*An [ItemModel](#) that supports thumbnail loading.*
- QVariant **data** (const QModelIndex &index, int role=Qt::DisplayRole) const override  
*Handles the ThumbnailRole.*
- bool **setData** (const QModelIndex &index, const QVariant &value, int role=Qt::DisplayRole) override  
*You can override the current thumbnail size by giving an integer value for ThumbnailRole.*
- void **setEmitDataChanged** (bool emitSignal)  
*Enable emitting dataChanged() when a thumbnail becomes available.*
- void **setExifRotate** (bool rotate)
- void **setPreloadThumbnails** (bool preload)  
*Enable preloading of thumbnails: If preloading is enabled, for every entry in the model a thumbnail generation is started.*
- void **setPreloadThumbnailSize** (const [ThumbnailSize](#) &thumbSize)  
*If you want to fix a size for preloading, do it here.*
- void **setThumbnailLoadThread** ([ThumbnailLoadThread](#) \*const thread)  
*Enable thumbnail loading and set the thread that shall be used.*
- void **setThumbnailSize** (const [ThumbnailSize](#) &thumbSize)  
*Set the thumbnail size to use.*
- [ThumbnailLoadThread](#) \* **thumbnailLoadThread** () const
- [ThumbnailSize](#) **thumbnailSize** () const

## Public Member Functions inherited from [Digikam::ItemModel](#)

- **ItemModel** (QObject \*const parent=nullptr)
- void **addItemInfo** (const [ItemInfo](#) &info)
  - Main entry point for subclasses adding image infos to the model.*
- void **addItemInfos** (const QList< [ItemInfo](#) > &infos)
- void **addItemInfos** (const QList< [ItemInfo](#) > &infos, const QList< QVariant > &extraValues)
- void **addItemInfosSynchronously** (const QList< [ItemInfo](#) > &infos)
- void **addItemInfosSynchronously** (const QList< [ItemInfo](#) > &infos, const QList< QVariant > &extraValues)
- void **addItemInfoSynchronously** (const [ItemInfo](#) &info)
  - addItemInfo() is asynchronous if a preprocessor is set.*
- void **clearItemInfos** ()
  - Clears image infos and resets model.*
- QVariant **data** (const QModelIndex &index, int role=Qt::DisplayRole) const override
- void **ensureHasGroupedImages** (const [ItemInfo](#) &groupLeader)
  - Ensure that all images grouped on the given leader are contained in the model.*
- void **ensureHasItemInfo** (const [ItemInfo](#) &info)
  - Add the given entries.*
- void **ensureHasItemInfos** (const QList< [ItemInfo](#) > &infos)
- void **ensureHasItemInfos** (const QList< [ItemInfo](#) > &infos, const QList< QVariant > &extraValues)
- Qt::ItemFlags **flags** (const QModelIndex &index) const override
- bool **hasImage** (const [ItemInfo](#) &info) const

- void **startIncrementalRefresh** ()  
*Starts an incremental refresh operation.*
- void **startRefresh** ()  
*Subclasses that add ItemInfos in batches shall call [startRefresh\(\)](#) when they start sending batches and [finishRefresh\(\)](#) when they have finished.*

## Additional Inherited Members

### Public Types inherited from Digikam::ItemModel

- enum [ItemModelRoles](#) {  
[ItemModelPointerRole](#) = Qt::UserRole , [ItemModelInternalId](#) = Qt::UserRole + 1 , [ThumbnailRole](#) = Qt::UserRole + 2 , [CreationDateRole](#) = Qt::UserRole + 3 ,  
[ExtraDataRole](#) = Qt::UserRole + 5 , [ExtraDataDuplicateCount](#) = Qt::UserRole + 6 , [LTLeftPanelRole](#) = Qt::UserRole + 50 , [LTRightPanelRole](#) = Qt::UserRole + 51 ,  
[SubclassRoles](#) = Qt::UserRole + 100 , [FilterModelRoles](#) = Qt::UserRole + 500 }

### Signals inherited from Digikam::ItemThumbnailModel

- void **thumbnailAvailable** (const QModelIndex &index, int requestedSize)
- void **thumbnailFailed** (const QModelIndex &index, int requestedSize)

### Signals inherited from Digikam::ItemModel

- void [allRefreshingFinished](#) ()  
*Signals that the model has finished currently with all scheduled refreshing, full or incremental, and all preprocessing.*
- void **imageChange** (const [ImageChangeset](#) &, const QItemSelection &)  
*If an [ImageChangeset](#) affected indexes of this model with changes as set in [watchFlags\(\)](#), this signal contains the changeset and the affected indexes.*
- void [imageInfosAboutToBeAdded](#) (const QList< [ItemInfo](#) > &infos)  
*Informs that ItemInfos will be added to the model.*
- void [imageInfosAboutToBeRemoved](#) (const QList< [ItemInfo](#) > &infos)  
*Informs that ItemInfos will be removed from the model.*
- void [imageInfosAdded](#) (const QList< [ItemInfo](#) > &infos)  
*Informs that ItemInfos have been added to the model.*
- void [imageInfosRemoved](#) (const QList< [ItemInfo](#) > &infos)  
*Informs that ItemInfos have been removed from the model.*
- void **imageTagChange** (const [ImageTagChangeset](#) &, const QItemSelection &)  
*If an [ImageTagChangeset](#) affected indexes of this model, this signal contains the changeset and the affected indexes.*
- void **preprocess** (const QList< [ItemInfo](#) > &infos, const QList< QVariant > &)  
*Connect to this signal only if you are the current preprocessor.*
- void **processAdded** (const QList< [ItemInfo](#) > &infos, const QList< QVariant > &)
- void [readyForIncrementalRefresh](#) ()  
*Signals that the model is right now ready to start an incremental refresh.*

### Static Public Member Functions inherited from Digikam::ItemModel

- static qlonglong **retrieveImageId** (const QModelIndex &index)
- static [ItemInfo](#) **retrieveItemInfo** (const QModelIndex &index)  
*Retrieves the imageInfo object from the data() method of the given index.*

### Protected Attributes inherited from Digikam::DragDropModelImplementation

- [AbstractItemDragDropHandler](#) \* **m\_dragDropHandler** = nullptr

## 9.792.1 Member Function Documentation

### 9.792.1.1 openAlbum

```
void Digikam::ItemAlbumModel::openAlbum (
    const QList< Album * > & albums ) [slot]
```

If called with 0, the model will be empty. Opening the same album again is a no-op. Extra safety, ensure that no null pointers are added

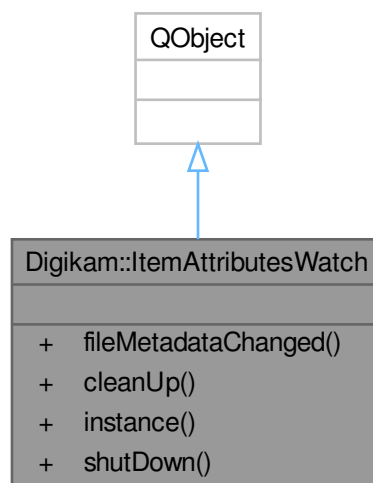

### 9.792.1.2 slotImageChange

```
void Digikam::ItemAlbumModel::slotImageChange (
    const ImageChangeset & changeset ) [override], [protected], [slot]
```

QList is designed for multiple selection, for now, only tags are supported for [SAlbum](#) it will be a list with one element

## 9.793 Digikam::ItemAttributesWatch Class Reference

Inheritance diagram for Digikam::ItemAttributesWatch:

### Signals

- void [signalFileMetadataChanged](#) (const QUrl &url)  
*Indicates that the metadata of the given file has been changed (a write operation on the file on disk).*
- void **signalImageCaptionChanged** (qulonglong imageId)
- void **signalImageDateChanged** (qulonglong imageId)
- void [signalImageRatingChanged](#) (qulonglong imageId)  
*These signals indicate that the rating, data or caption of the image with given imageId was set.*
- void [signalImagesChanged](#) (int albumId)  
*Indicates that images in the given album id may have changed their tags.*
- void [signalImageTagsChanged](#) (qulonglong imageId)  
*Indicates that tags have been assigned or removed for image with given imageId.*

## Public Member Functions

- void **fileMetadataChanged** (const QUrl &url)

## Static Public Member Functions

- static void **cleanUp** ()
- static [ItemAttributesWatch](#) \* **instance** ()
- static void **shutDown** ()

## 9.793.1 Member Function Documentation

### 9.793.1.1 signalFileMetadataChanged

```
void Digikam::ItemAttributesWatch::signalFileMetadataChanged (
    const QUrl & url ) [signal]
```

Usually, the database is updated accordingly, so then this signal is sent in combination with one or more of the above signals.

### 9.793.1.2 signalImageRatingChanged

```
void Digikam::ItemAttributesWatch::signalImageRatingChanged (
    qlonglong imageId ) [signal]
```

There is no guarantee that it actually changed.

### 9.793.1.3 signalImagesChanged

```
void Digikam::ItemAttributesWatch::signalImagesChanged (
    int albumId ) [signal]
```

This signal, the signal above, or both may be sent.

### 9.793.1.4 signalImageTagsChanged

```
void Digikam::ItemAttributesWatch::signalImageTagsChanged (
    qlonglong imageId ) [signal]
```

There is no guarantee that the tags were actually changed. This signal, the signal below, or both may be sent.

# 9.794 Digikam::ItemCategorizedView Class Reference

Inheritance diagram for Digikam::ItemCategorizedView:

### Public Slots

- void **hintAt** (const [ItemInfo](#) &info)

*Does something to gain attention for info, but not changing current selection.*

- void **openAlbum** (const QList< Album \* > &album)
- void **setCurrentInfo** (const ItemInfo &info)  
*Set as current item the item identified by the imageinfo.*
- void **setCurrentUrl** (const QUrl &url)  
*Set as current item the item identified by its file url.*
- void **setCurrentUrlWhenAvailable** (const QUrl &url)  
*Set as current item when it becomes available, the item identified by its file url.*
- void **setCurrentWhenAvailable** (qulonglong imageId)  
*Scroll the view to the given item when it becomes available.*
- void **setSelectedItemInfos** (const QList< ItemInfo > &infos)  
*Set selected items.*
- void **setSelectedUrls** (const QList< QUrl > &urlList)  
*Set selected items identified by their file urls.*
- void **setThumbnailSize** (int size)

### Public Slots inherited from Digikam::ItemViewCategorized

- void **copy** () override
- void **cut** () override
- void **hideIndexNotification** ()
- void **paste** () override
- void **showIndexNotification** (const QModelIndex &index, const QString &message)

### Public Slots inherited from Digikam::DCategorizedView

- void **reset** () override

### Signals

- void **currentChanged** (const ItemInfo &info)
- void **deselected** (const QList< ItemInfo > &nowDeselectedInfos)  
*Emitted when items are deselected. There may be other selected infos left. This signal is not emitted when the model is reset; then only selectionCleared is emitted.*
- void **imageActivated** (const ItemInfo &info)  
*Emitted when the given image is activated. Info is never null.*
- void **modelChanged** ()  
*Emitted when a new model is set.*
- void **selected** (const QList< ItemInfo > &newSelectedInfos)  
*Emitted when new items are selected. The parameter includes only the newly selected infos, there may be other already selected infos.*

### Signals inherited from Digikam::ItemViewCategorized

- void **clicked** (const QMouseEvent \*e, const QModelIndex &index)  
*For overlays: Like the respective parent class signals, but with additional info.*
- void **entered** (const QMouseEvent \*e, const QModelIndex &index)
- void **keyPressed** (QKeyEvent \*e)  
*Remember you may want to check if the event is accepted or ignored.*
- void **selectionChanged** ()  
*Emitted when any selection change occurs.*
- void **selectionCleared** ()  
*Emitted when the selection is completely cleared.*
- void **viewportClicked** (const QMouseEvent \*e)  
*While clicked() is emitted with a valid index, this corresponds to clicking on empty space.*
- void **zoomInStep** ()
- void **zoomOutStep** ()

## Public Member Functions

- **ItemCategorizedView** (QWidget \*const parent=nullptr)
- void **addOverlay** (ItemDelegateOverlay \*overlay, ItemDelegate \*delegate=nullptr)
 

*Add and remove an overlay. It will as well be removed automatically when destroyed. Unless you pass a different delegate, the current delegate will be used.*
- void **addSelectionOverlay** (ItemDelegate \*delegate=nullptr)
- Album \* **albumAt** (const QPoint &pos) const
 

*If the model is categorized by an album, returns the album of the category that contains the position.*
- ItemInfoList **allItemInfos** () const
- QList< QUrl > **allUrls** () const
- Album \* **currentAlbum** () const
- ItemInfo **currentInfo** () const
- QUrl **currentUrl** () const
- ItemDelegate \* **delegate** () const
- QItemSelectionModel \* **getSelectionModel** () const
- ItemAlbumFilterModel \* **imageAlbumFilterModel** () const
- ItemAlbumModel \* **imageAlbumModel** () const
 

*Returns 0 if the ItemModel is not an ItemAlbumModel.*
- ItemFilterModel \* **imageFilterModel** () const
 

*Returns any ItemFilterMode in chain. May not be sourceModel()*
- ItemModel \* **imageModel** () const
- ImageSortFilterModel \* **imageSortFilterModel** () const
- ItemThumbnailModel \* **imageThumbnailModel** () const
 

*Returns 0 if the ItemModel is not an ItemThumbnailModel.*
- QModelIndex **indexForInfo** (const ItemInfo &info) const
- ItemInfo **nextInfo** (const ItemInfo &info)
- ItemInfo **nextInOrder** (const ItemInfo &startingPoint, int nth)
 

*Returns the n-th info after the given one.*
- ItemInfo **previousInfo** (const ItemInfo &info)
- void **removeOverlay** (ItemDelegateOverlay \*overlay)
- ItemInfoList **selectedItemInfos** () const
- ItemInfoList **selectedItemInfosCurrentFirst** () const
- void **setModels** (ItemModel \*model, ImageSortFilterModel \*filterModel)
- virtual void **setThumbnailSize** (const ThumbnailSize &size)
- ThumbnailSize **thumbnailSize** () const
- void **toIndex** (const QUrl &url)
 

*Selects the index as current and scrolls to it.*

## Public Member Functions inherited from Digikam::ItemViewCategorized

- ItemViewCategorized (QWidget \*const parent=nullptr)
- void **awayFromSelection** ()
- DItemDelegate \* **delegate** () const
- void **invertSelection** ()
- bool **isToolTipEnabled** () const
- int **numberOfSelectedIndexes** () const
- void **scrollTo** (const QModelIndex &index, ScrollHint hint=EnsureVisible) override
- void **scrollToRelaxed** (const QModelIndex &index, ScrollHint hint=EnsureVisible)
 

*Like scrollTo, but only scrolls if the index is not visible, regardless of hint.*
- void **setInitialSelectedItem** (bool enabled)
 

*Ensure a initial selected item.*

- void **setScrollCurrentToCenter** (bool enabled)  
*Scroll automatically the current index to center of the view.*
- void **setScrollStepGranularity** (int factor)  
*Determine a step size for scrolling: The larger this number, the smaller and more precise is the scrolling.*
- void **setSelectedIndexes** (const QList< QModelIndex > &indexes)
- void **setSpacing** (int spacing)  
*Sets the spacing.*
- void **setToolTipEnabled** (bool enabled)
- void **setUsePointingHandCursor** (bool useCursor)  
*Set if the PointingHand Cursor should be shown over the activation area.*
- void **toFirstIndex** ()  
*Selects the index as current and scrolls to it.*
- void **toIndex** (const QModelIndex &index)
- void **toLastIndex** ()
- void **toNextIndex** ()
- void **toPreviousIndex** ()

## Public Member Functions inherited from [Digikam::DCategorizedView](#)

- **DCategorizedView** (QWidget \*const parent=nullptr)
- virtual QModelIndexList **categorizedIndexesIn** (const QRect &rect) const  
*This method will return all indexes whose visual rect intersects rect.*
- virtual QModelIndex **categoryAt** (const QPoint &point) const  
*This method will return the first index of the category in the region of which point is found.*
- **DCategoryDrawer \* categoryDrawer** () const
- virtual QItemSelectionRange **categoryRange** (const QModelIndex &index) const  
*This method returns the range of indexes contained in the category in which index is sorted.*
- virtual QRect **categoryVisualRect** (const QModelIndex &index) const  
*This method will return the visual rect of the header of the category in which index is sorted.*
- QModelIndex **indexAt** (const QPoint &point) const override
- void **setCategoryDrawer** (DCategoryDrawer \*categoryDrawer)
- void **setDrawDraggedItems** (bool drawDraggedItems)  
*Switch on drawing of dragged items.*
- void **setGridSize** (const QSize &size)
- void **setModel** (QAbstractItemModel \*model) override
- QRect **visualRect** (const QModelIndex &index) const override

- void **dropEvent** (`QDropEvent *e`)
- void **encodelsCutSelection** (`QMimeData *mime`, bool `isCutSelection`)
- void **startDrag** (`Qt::DropActions supportedActions`)

### 9.794.1 Member Function Documentation

#### 9.794.1.1 activated()

```
void Digikam::ItemCategorizedView::activated (
    const ItemInfo & info,
    Qt::KeyboardModifiers modifiers ) [protected], [virtual]
```

Reimplemented in [Digikam::DigikamItemView](#).

#### 9.794.1.2 albumAt()

```
Album * Digikam::ItemCategorizedView::albumAt (
    const QPoint & pos ) const
```

If this is not applicable, return the current album. May return 0.

#### 9.794.1.3 dragDropHandler()

```
AbstractItemDragDropHandler * Digikam::ItemCategorizedView::dragDropHandler ( ) const [override],
[protected], [virtual]
```

Implements [Digikam::DragDropViewImplementation](#).

#### 9.794.1.4 filterModel()

```
QSortFilterProxyModel * Digikam::ItemCategorizedView::filterModel ( ) const [override], [protected],
[virtual]
```

Implements [Digikam::ItemViewCategorized](#).

#### 9.794.1.5 indexActivated()

```
void Digikam::ItemCategorizedView::indexActivated (
    const QModelIndex & index,
    Qt::KeyboardModifiers modifiers ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemViewCategorized](#).

### 9.794.1.6 nextIndexHint()

```
QModelIndex Digikam::ItemCategorizedView::nextIndexHint (
    const QModelIndex & indexToAnchor,
    const QItemSelectionRange & removed ) const [override], [protected], [virtual]
```

The default implementation returns the next remaining sibling.

Reimplemented from [Digikam::ItemViewCategorized](#).

### 9.794.1.7 nextInOrder()

```
ItemInfo Digikam::ItemCategorizedView::nextInOrder (
    const ItemInfo & startingPoint,
    int nth )
```

Specifically, return the previous info for  $nth = -1$  and the next info for  $n = 1$ . Returns a null info if either `startingPoint` or the `nth` info are not contained in the model.

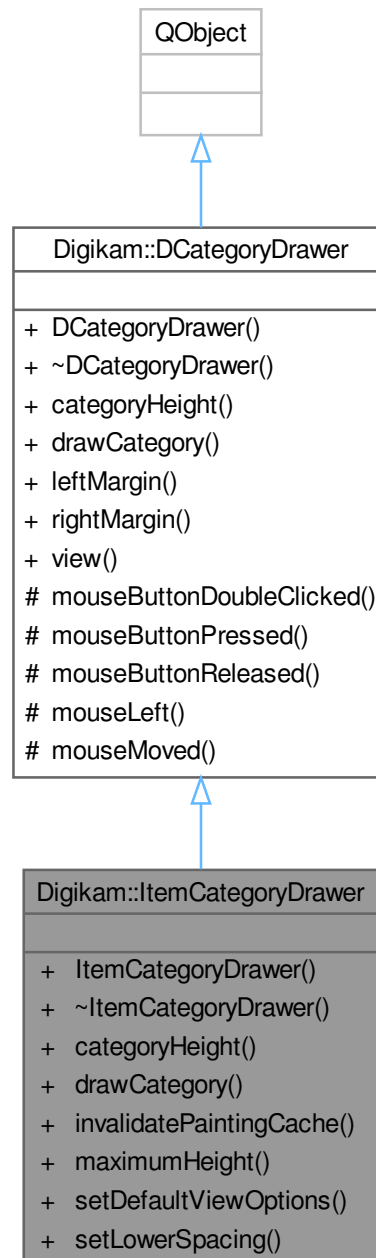

### 9.794.1.8 showContextMenuOnIndex()

```
void Digikam::ItemCategorizedView::showContextMenuOnIndex (
    QContextMenuEvent * event,
    const QModelIndex & index ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemViewCategorized](#).

## 9.795 Digikam::ItemCategoryDrawer Class Reference

Inheritance diagram for Digikam::ItemCategoryDrawer:

### Public Member Functions

- **ItemCategoryDrawer** ([ItemCategorizedView](#) \*const parent)
- int [categoryHeight](#) (const QModelIndex &index, const QStyleOption &option) const override

- void [drawCategory](#) (const QModelIndex &index, int sortRole, const QStyleOption &option, QPainter \*painter) const override  
*This method purpose is to draw a category represented by the given.*
- void [invalidatePaintingCache](#) ()
- virtual int [maximumHeight](#) () const
- void [setDefaultViewOptions](#) (const QStyleOptionViewItem &option)
- void [setLowerSpacing](#) (int spacing)

## Public Member Functions inherited from [Digikam::DCategoryDrawer](#)

- [DCategoryDrawer](#) ([DCategorizedView](#) \*const view)  
*Construct a category drawer for a given view.*
- virtual int [leftMargin](#) () const
- virtual int [rightMargin](#) () const
- [DCategorizedView](#) \* view () const

## Additional Inherited Members

## Signals inherited from [Digikam::DCategoryDrawer](#)

- void [actionRequested](#) (int action, const QModelIndex &index)  
*Emit this signal on your subclass implementation to notify that something happened.*
- void [collapseOrExpandClicked](#) (const QModelIndex &index)  
*This signal becomes emitted when collapse or expand has been clicked.*

## Protected Member Functions inherited from [Digikam::DCategoryDrawer](#)

- virtual void [mouseButtonDoubleClicked](#) (const QModelIndex &index, const QRect &blockRect, QMouseEvent \*event)  
*Method called when the mouse button has been double clicked.*
- virtual void [mouseButtonPressed](#) (const QModelIndex &index, const QRect &blockRect, QMouseEvent \*event)  
*Method called when the mouse button has been pressed.*
- virtual void [mouseButtonReleased](#) (const QModelIndex &index, const QRect &blockRect, QMouseEvent \*event)  
*Method called when the mouse button has been released.*
- virtual void [mouseLeft](#) (const QModelIndex &index, const QRect &blockRect)  
*Method called when the mouse button has left this block.*
- virtual void [mouseMoved](#) (const QModelIndex &index, const QRect &blockRect, QMouseEvent \*event)  
*Method called when the mouse has been moved.*

## 9.795.1 Member Function Documentation

### 9.795.1.1 [categoryHeight\(\)](#)

```
int Digikam::ItemCategoryDrawer::categoryHeight (
    const QModelIndex & index,
    const QStyleOption & option ) const [override], [virtual]
```

#### Returns

The category height for the category represented by index `index` with style options `option`.

Reimplemented from [Digikam::DCategoryDrawer](#).

### 9.795.1.2 drawCategory()

```
void Digikam::ItemCategoryDrawer::drawCategory (
    const QModelIndex & index,
    int sortRole,
    const QStyleOption & option,
    QPainter * painter ) const [override], [virtual]
```

#### Parameters

<i>index</i>	with the given
<i>sortRole</i>	sorting role
<i>option</i>	painter style options
<i>painter</i>	painter instance

#### Note

This method will be called one time per category, always with the first element in that category

Reimplemented from [Digikam::DCategoryDrawer](#).

## 9.796 Digikam::ItemChangeHint Class Reference

### Public Types

- enum [ChangeType](#) { [ItemModified](#) , [ItemRescan](#) }

An [ItemCopyMoveHint](#) describes a list of existing items that should be updated although the modification date may not have changed.

### Public Member Functions

- **ItemChangeHint** (const QList< qlonglong > &srcIds, [ChangeType](#) type=[ItemModified](#))
- [ChangeType](#) **changeType** () const
- QList< qlonglong > **ids** () const
- bool **isId** (qlonglong id) const
- bool **isModified** () const
- bool **needsRescan** () const
- [ItemChangeHint](#) & **operator**<< (const QDBusArgument &argument)
- const [ItemChangeHint](#) & **operator**>> (QDBusArgument &argument) const

### Protected Attributes

- QList< qlonglong > **m\_ids**
- [ChangeType](#) **m\_type** = [ItemModified](#)

## 9.796.1 Member Enumeration Documentation

### 9.796.1.1 ChangeType

```
enum Digikam::ItemChangeHint::ChangeType
```

## Enumerator

ItemModified	treat as if modification date changed
ItemRescan	reread metadata

## 9.797 Digikam::ItemComments Class Reference

### Public Types

- enum [LanguageChoiceBehavior](#) { [ReturnMatchingLanguageOnly](#) , [ReturnMatchingOrDefaultLanguage](#) , [ReturnMatchingDefaultOrFirstLanguage](#) }

The *ItemComments* class shall provide short-lived objects that provide read/write access to the comments stored in the database.

- enum [UniqueBehavior](#) { [UniquePerLanguage](#) , [UniquePerLanguageAndAuthor](#) }

### Public Member Functions

- **ItemComments** ()  
Create a null *ItemComments* object.
- **ItemComments** (const [CoreDbAccess](#) &access, qulonglong imageid)  
Create a *ItemComments* object for the image with the specified id.
- **ItemComments** (const [ItemComments](#) &other)
- **ItemComments** (qulonglong imageid)  
Create a *ItemComments* object for the image with the specified id.
- void **addComment** (const [QString](#) &comment, const [QString](#) &language=[QString](#)(), const [QString](#) &author=[QString](#)(), const [QDateTime](#) &date=[QDateTime](#)(), [DatabaseComment::Type](#) type=[DatabaseComment::Comment](#))  
Add a new comment to the list of normal image comments, specified with language and author.
- void **addHeadline** (const [QString](#) &headline, const [QString](#) &language=[QString](#)(), const [QString](#) &author=[QString](#)(), const [QDateTime](#) &date=[QDateTime](#)())  
Convenience method to add a comment of type *Headline*.
- void **addTitle** (const [QString](#) &title, const [QString](#) &language=[QString](#)(), const [QString](#) &author=[QString](#)(), const [QDateTime](#) &date=[QDateTime](#)())  
Convenience method to add a comment of type *Headline*.
- void **apply** ()  
Apply all changes.
- void **apply** ([CoreDbAccess](#) &access)
- [QString](#) **author** (int index) const
- void **changeAuthor** (int index, const [QString](#) &author)
- void **changeComment** (int index, const [QString](#) &comment)  
Access individual properties.
- void **changeDate** (int index, const [QDateTime](#) &date)
- void **changeLanguage** (int index, const [QString](#) &language)
- void **changeType** (int index, [DatabaseComment::Type](#) type)
- [QString](#) **comment** (int index) const
- [QString](#) **commentForLanguage** (const [QString](#) &languageCode, int \*const index=nullptr, [LanguageChoiceBehavior](#) behavior=[ReturnMatchingDefaultOrFirstLanguage](#)) const  
Returns a comment for the specified language.
- [QDateTime](#) **date** (int index) const

- QString **defaultComment** (DatabaseComment::Type **type**=DatabaseComment::Comment) const  
*This methods presents one of the comment strings of the available comment as the default value, when you just want to have one string.*
- QString **defaultComment** (int \*const index, Digikam::DatabaseComment::Type **type**=DatabaseComment::Comment) const
- bool **isNull** () const
- QString **language** (int index) const  
*RFC 3066 notation, or "x-default".*
- int **numberOfComments** () const  
*Returns the number of comments available.*
- **ItemComments** & **operator=** (const **ItemComments** &other)
- void **remove** (int index)  
*Remove the entry referred to by index.*
- void **removeAll** ()  
*Remove all entries of all types: Comments, Headlines, Titles.*
- void **removeAll** (DatabaseComment::Type **type**)  
*Remove all entries of the given type.*
- void **removeAllComments** ()  
*Convenience method: remove all entries of type Comment.*
- void **replaceComments** (const **CaptionsMap** &comments, DatabaseComment::Type **type**=DatabaseComment::Comment)  
*Replaces all existing comments with the given set of comments and associated language.*
- void **replaceFrom** (const **ItemComments** &source)  
*Replaces all entries in this object with all entries from source.*
- void **setUniqueBehavior** (**UniqueBehavior** behavior)  
*Changes the behavior to unique comments per language, see the enum above for possible values.*
- **CaptionsMap toCaptionsMap** (DatabaseComment::Type=DatabaseComment::Comment) const  
*Returns all entries of the given type in a **CaptionsMap** container.*
- DatabaseComment::Type **type** (int index) const  
*Access individual properties.*

### Protected Member Functions

- void **addCommentDirectly** (const QString &comment, const QString &language, const QString &author, DatabaseComment::Type **type**, const QDateTime &date)

### Protected Attributes

- QSharedPointer< Private > **d**

## 9.797.1 Member Enumeration Documentation

### 9.797.1.1 LanguageChoiceBehavior

enum [Digikam::ItemComments::LanguageChoiceBehavior](#)

It is a mere wrapper around the less convenient access methods in [CoreDB](#). Database results are cached, but the object will not listen to database changes from other places.

Changes are applied to the database only after calling [apply\(\)](#), which you can call any time and which will in any case be called from the destructor.

## Enumerator

ReturnMatchingLanguageOnly	Return only a comment if the language code (at least the language code, the country part may differ) is identical. Else returns a null QString.
ReturnMatchingOrDefaultLanguage	If no matching language as above is found, return the default language.
ReturnMatchingDefaultOrFirstLanguage	If no matching or default language is found, return the first comment. Returns a null string only if no comment is available.

## 9.797.1.2 UniqueBehavior

```
enum Digikam::ItemComments::UniqueBehavior
```

## Enumerator

UniquePerLanguage	Allow only one comment per language. Default setting.
UniquePerLanguageAndAuthor	Allow multiple comments per language, each with a different author.

## 9.797.2 Constructor &amp; Destructor Documentation

## 9.797.2.1 ItemComments()

```
Digikam::ItemComments::ItemComments (
    const CoreDbAccess & access,
    qulonglong imageid )
```

The existing [CoreDbAccess](#) object will be used to access the database.

## 9.797.3 Member Function Documentation

## 9.797.3.1 addComment()

```
void Digikam::ItemComments::addComment (
    const QString & comment,
    const QString & language = QString(),
    const QString & author = QString(),
    const QDateTime & date = QDateTime(),
    DatabaseComment::Type type = DatabaseComment::Comment )
```

Checking for unique comments is done as set by `setUniqueBehavior`. If you pass a null string as language, it will be translated to the language code designating the default language ("x-default"). If you just want to change the one comment of the image, call `addComment(myComment)`;

### 9.797.3.2 addHeadline()

```
void Digikam::ItemComments::addHeadline (
    const QString & headline,
    const QString & language = QString(),
    const QString & author = QString(),
    const QDateTime & date = QDateTime() )
```

Calls addComment, see above for more info.

### 9.797.3.3 addTitle()

```
void Digikam::ItemComments::addTitle (
    const QString & title,
    const QString & language = QString(),
    const QString & author = QString(),
    const QDateTime & date = QDateTime() )
```

Calls addComment, see above for more info.

### 9.797.3.4 apply()

```
void Digikam::ItemComments::apply ( )
```

Also called in destructor, so you typically do not need to call this.

### 9.797.3.5 changeComment()

```
void Digikam::ItemComments::changeComment (
    int index,
    const QString & comment )
```

Please ensure that the specified index is a valid index

### 9.797.3.6 commentForLanguage()

```
QString Digikam::ItemComments::commentForLanguage (
    const QString & languageCode,
    int *const index = nullptr,
    LanguageChoiceBehavior behavior = ReturnMatchingDefaultOrFirstLanguage ) const
```

Matching behavior can be specified. Optionally also returns the index with which you can access further information about the comment.

### 9.797.3.7 defaultComment()

```
QString Digikam::ItemComments::defaultComment (
    DatabaseComment::Type type = DatabaseComment::Comment ) const
```

Optionally also returns the index with which you can access further information about the comment.

### 9.797.3.8 replaceComments()

```
void Digikam::ItemComments::replaceComments (
    const CaptionsMap & comments,
    DatabaseComment::Type type = DatabaseComment::Comment )
```

Optionally date and author can be specified in [CaptionsMap](#) container.

### 9.797.3.9 setUniqueBehavior()

```
void Digikam::ItemComments::setUniqueBehavior (
    UniqueBehavior behavior )
```

Default value is UniquePerLanguage. Note: This is *not* a property of the database, but only of this single [ItemComments](#) object,

### 9.797.3.10 type()

```
DatabaseComment::Type Digikam::ItemComments::type (
    int index ) const
```

Please ensure that the specified index is a valid index

## 9.798 Digikam::ItemCoordinatesOverlay Class Reference

Inheritance diagram for Digikam::ItemCoordinatesOverlay:

### Public Member Functions

- **ItemCoordinatesOverlay** (QObject \*const parent)
- [CoordinatesOverlayWidget](#) \* **buttonWidget** () const

## Public Member Functions inherited from [Digikam::AbstractWidgetDelegateOverlay](#)

- [AbstractWidgetDelegateOverlay](#) (QObject \*const parent)  
*This class provides functionality for using a widget in an overlay.*

## Public Member Functions inherited from [Digikam::ItemDelegateOverlay](#)

- [ItemDelegateOverlay](#) (QObject \*const parent=nullptr)
- virtual bool [acceptsDelegate](#) (QAbstractItemDelegate \*) const
- QAbstractItemDelegate \* [delegate](#) () const
- virtual void [mouseMoved](#) (QMouseEvent \*e, const QRect &visualRect, const QModelIndex &index)  
*Only these two methods are implemented as virtual methods.*
- virtual void [paint](#) (QPainter \*p, const QStyleOptionViewItem &option, const QModelIndex &index)
- void [setDelegate](#) (QAbstractItemDelegate \*delegate)
- void [setView](#) (QAbstractItemView \*view)
- QAbstractItemView \* [view](#) () const

## Protected Member Functions

- bool [checkIndex](#) (const QModelIndex &index) const override  
*Return true here if you want to show the overlay for the given index.*
- QWidget \* [createWidget](#) () override  
*Create your widget here.*
- void [setActive](#) (bool active) override  
*If active is true, this will call [createWidget\(\)](#), initialize the widget for use, and setup connections for the virtual slots.*
- void [slotEntered](#) (const QModelIndex &index) override  
*Default implementation shows the widget iff the index is valid and [checkIndex](#) returns true.*
- void [updatePosition](#) ()
- void [visualChange](#) () override  
*Called when any change from the delegate occurs - when the overlay is installed, when size hints, styles or fonts change.*

## Protected Member Functions inherited from [Digikam::AbstractWidgetDelegateOverlay](#)

- bool [checkIndexOnEnter](#) (const QModelIndex &index) const  
*Utility method called from [slotEntered](#).*
- bool [eventFilter](#) (QObject \*obj, QEvent \*event) override
- virtual void [hide](#) ()  
*Called when the widget shall be hidden (mouse cursor left index, viewport, uninstalled etc.).*
- virtual QString [notifyMultipleMessage](#) (const QModelIndex &, int number)
- QWidget \* [parentWidget](#) () const  
*Returns the widget to be used as parent for your widget created in [createWidget\(\)](#)*
- virtual void [viewportLeaveEvent](#) (QObject \*obj, QEvent \*event)  
*Called when a `QEvent::Leave` of the viewport is received.*
- virtual void [widgetEnterEvent](#) ()  
*Called when a `QEvent::Enter` resp.*
- void [widgetEnterNotifyMultiple](#) (const QModelIndex &index)  
*A sample implementation for above methods.*
- virtual void [widgetLeaveEvent](#) ()
- void [widgetLeaveNotifyMultiple](#) ()

## Protected Member Functions inherited from [Digikam::ItemDelegateOverlay](#)

- `QList< QModelIndex > affectedIndexes` (const QModelIndex &index) const
- `bool affectsMultiple` (const QModelIndex &index) const  
*For the context that an overlay can affect multiple items: Assuming the currently overlaid index is given.*
- `int numberOfAffectedIndexes` (const QModelIndex &index) const
- `bool viewHasMultiSelection` () const  
*Utility method.*

## Protected Attributes

- `QPersistentModelIndex m_index`

## Protected Attributes inherited from [Digikam::AbstractWidgetDelegateOverlay](#)

- `bool m_mouseButtonPressedOnWidget` = false
- `QWidget * m_widget` = nullptr

## Protected Attributes inherited from [Digikam::ItemDelegateOverlay](#)

- `QAbstractItemDelegate * m_delegate` = nullptr
- `QAbstractItemView * m_view` = nullptr

## Additional Inherited Members

## Signals inherited from [Digikam::ItemDelegateOverlay](#)

- `void hideNotification` ()
- `void requestNotification` (const QModelIndex &index, const QString &message)
- `void update` (const QModelIndex &index)

## Protected Slots inherited from [Digikam::AbstractWidgetDelegateOverlay](#)

- `virtual void slotLayoutChanged` ()
- `virtual void slotReset` ()  
*Default implementations of these three slots call `hide()`*
- `virtual void slotRowsRemoved` (const QModelIndex &parent, int start, int end)
- `virtual void slotViewportEntered` ()

## Protected Slots inherited from [Digikam::ItemDelegateOverlay](#)

### 9.798.1 Member Function Documentation

#### 9.798.1.1 `checkIndex()`

```
bool Digikam::ItemCoordinatesOverlay::checkIndex (
    const QModelIndex & index ) const [override], [protected], [virtual]
```

The default implementation returns true.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.798.1.2 createWidget()

```
QWidget * Digikam::ItemCoordinatesOverlay::createWidget ( ) [override], [protected], [virtual]
```

When creating the object, pass [parentWidget\(\)](#) as parent widget. Ownership of the object is passed. It will be deleted in [setActive\(false\)](#).

Implements [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.798.1.3 setActive()

```
void Digikam::ItemCoordinatesOverlay::setActive (
    bool active ) [override], [protected], [virtual]
```

If active is false, this will delete the widget and disconnect all signal from model and view to this object (!)

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.798.1.4 slotEntered()

```
void Digikam::ItemCoordinatesOverlay::slotEntered (
    const QModelIndex & index ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.798.1.5 visualChange()

```
void Digikam::ItemCoordinatesOverlay::visualChange ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemDelegateOverlay](#).

## 9.799 Digikam::ItemCopyMoveHint Class Reference

### Public Member Functions

- [ItemCopyMoveHint](#) ()=default
  - An [ItemCopyMoveHint](#) describes a list of existing items that will be copied, moved or renamed to an album given by album root id and album id.*
- [ItemCopyMoveHint](#) (const QList< qlonglong > &srcIds, int dstAlbumRootId, int albumId, const QStringList &dstNames)
- int [albumIdDst](#) () const
- int [albumRootIdDst](#) () const
- [CollectionScannerHints::Album](#) [dst](#) () const
- QString [dstName](#) (qlonglong id) const
- QStringList [dstNames](#) () const
- bool [isDstAlbum](#) (int albumRootId, int albumId) const
- bool [isSrcId](#) (qlonglong id) const
- **operator const [CollectionScannerHints::Album](#) & ()** const
- [ItemCopyMoveHint](#) & **operator**<< (const QDBusArgument &argument)
- bool **operator**== (const [CollectionScannerHints::Album](#) &dst) const
- const [ItemCopyMoveHint](#) & **operator**>> (QDBusArgument &argument) const
- QList< qlonglong > [srcIds](#) () const

## Protected Attributes

- CollectionScannerHints::Album **m\_dst**
- QStringList **m\_dstNames**
- QList< qlonglong > **m\_srcIds**

## 9.799.1 Constructor & Destructor Documentation

### 9.799.1.1 ItemCopyMoveHint()

```
Digikam::ItemCopyMoveHint::ItemCopyMoveHint ( ) [default]
```

In the new album, the items will have the filenames given in dstNames.

## 9.800 Digikam::ItemCopyright Class Reference

### Public Types

- enum [ReplaceMode](#) { [ReplaceAllEntries](#) , [ReplaceLanguageEntry](#) , [AddEntryToExisting](#) }

### Public Member Functions

- **ItemCopyright** ()=default  
*Create a null [ItemCopyright](#) object.*

## Protected Attributes

- ItemCopyrightCache \* **m\_cache** = nullptr
- qlonglong **m\_id** = 0

## Friends

- class **ItemCopyrightCache**

## 9.800.1 Member Enumeration Documentation

### 9.800.1.1 ReplaceMode

```
enum Digikam::ItemCopyright::ReplaceMode
```

#### Enumerator

ReplaceAllEntries	Remove entries for all languages and add one new entry.
ReplaceLanguageEntry	Only replace the entry with the given language.
AddEntryToExisting	No constraints on adding the entry.

## 9.800.2 Member Function Documentation

### 9.800.2.1 contactInfo()

```
IptcCoreContactInfo Digikam::ItemCopyright::contactInfo ( )
```

This is Iptc4xmpCore:CreatorContactInfo in XMP. The creator's contact information provides all necessary information to get in contact with the creator of this news object and comprises a set of sub-properties for proper addressing.

### 9.800.2.2 copyrightNotice()

```
QString Digikam::ItemCopyright::copyrightNotice (
    const QString & languageCode = QString() )
```

This is Photoshop Copyright Notice. This is IPTC Copyright Notice. This is DC Rights. This is dc:rights in XMP. Contains any necessary copyright notice for claiming the intellectual property for this news object and should identify the current owner of the copyright for the news object. Other entities like the creator of the news object may be added. Notes on usage rights should be provided in Rights usage terms. Note on language matching: You can specify a language code. If the requested language is not available, the entry with default language code is returned. If a default-language entry is not available, the first entry is returned. If you pass a null string as languageCode, the local language is returned.

### 9.800.2.3 creator()

```
QStringList Digikam::ItemCopyright::creator ( ) const
```

This is Photoshop Author. This is IPTC By-line. This is DC creator. This is dc:creator in XMP. Contains preferably the name of the person who created the content of this news object, a photographer for photos, a graphic artist for graphics, or a writer for textual news. If it is not appropriate to add the name of a person the name of a company or organization could be applied as well. Aligning with IIM notions IPTC Core intends to have only one creator for this news object despite the underlying XMP property dc:creator allows for more than one item to be included. If there are more than one item in this array the first one should be considered as the IPTC Core Creator value.

### 9.800.2.4 creatorJobTitle()

```
QString Digikam::ItemCopyright::creatorJobTitle ( ) const
```

This is Photoshop AuthorsPosition. This is IPTC By-line Title. This is photoshop:AuthorsPosition in XMP. Contains the job title of the person who created the content of this news object. As this is sort of a qualifier the Creator element has to be filled in as mandatory prerequisite for using Creator's Jobtitle.

### 9.800.2.5 fillTemplate()

```
void Digikam::ItemCopyright::fillTemplate (
    Template & t )
```

There will not be touched)

### 9.800.2.6 instructions()

```
QString Digikam::ItemCopyright::instructions ( )
```

This is Photoshop Instructions. This is IPTC Special Instruction. This is photoshop:Instructions in XMP. Any of a number of instructions from the provider or creator to the receiver of the news object which might include any of the following: embargoes (NewsMagazines OUT) and other restrictions not covered by the Rights Usage Terms field; information regarding the original means of capture (scanning notes, colorspace info) or other specific text information that the user may need for accurate reproduction; additional permissions or credits required when publishing.

### 9.800.2.7 provider()

```
QString Digikam::ItemCopyright::provider ( ) const
```

This is Photoshop Credit. This is IPTC Credit. This is photoshop:Credit in XMP Identifies the provider of the news object, who is not necessarily the owner/creator.

### 9.800.2.8 rightsUsageTerms()

```
QString Digikam::ItemCopyright::rightsUsageTerms (
    const QString & languageCode = QString() )
```

This has no equivalent in Photoshop, IPTC, or DC. This is xmpRights:UsageTerms in XMP. Language matching is done as with [copyrightNotice\(\)](#). Free text instructions on how this news object can be legally used.

### 9.800.2.9 setCopyrightNotice()

```
void Digikam::ItemCopyright::setCopyrightNotice (
    const QString & notice,
    const QString & languageCode = QString(),
    ReplaceMode mode = ReplaceLanguageEntry )
```

If you supply a null QString as language code, this is regarded as an entry for the default language ("x-default"). The ReplaceMode determines how existing entries are handled.

### 9.800.2.10 setCreator()

```
void Digikam::ItemCopyright::setCreator (
    const QString & creator,
    ReplaceMode mode = ReplaceAllEntries )
```

If you want to specify only one creator, set the replace mode to ReplaceAllEntries. If you want to add it to a list of existing entries, pass AddEntryToExisting. You shall not use ReplaceLanguageEntry for this method, creators have no language associated.

### 9.800.2.11 setFromTemplate()

```
void Digikam::ItemCopyright::setFromTemplate (
    const Template & t )
```

This does not clear any fields before.

### 9.800.2.12 source()

```
QString Digikam::ItemCopyright::source ( )
```

This is Photoshop Source. This is IPTC Source. This is photoshop::Source in XMP. Identifies the original owner of the copyright for the intellectual content of the news object. This could be an agency, a member of an agency or an individual. Source could be different from Creator and from the entities in the CopyrightNotice. As the original owner can not change the content of this property should never be changed or deleted after the information is entered following the news object's initial creation.

## 9.801 Digikam::ItemDelegate Class Reference

Inheritance diagram for Digikam::ItemDelegate:

### Public Member Functions

- **ItemDelegate** (QWidget \*const parent)
- bool **acceptsActivation** (const QPoint &pos, const QRect &visualRect, const QModelIndex &index, QRect \*activationRect=nullptr) const override

- bool [acceptsToolTip](#) (const QPoint &pos, const QRect &visualRect, const QModelIndex &index, QRect \*tooltipRect=nullptr) const override  
*These methods take four parameters: The position on viewport, the rect on viewport, the index, and optionally a parameter into which, if the return value is true, a rectangle can be written for which the return value will be true as well.*
- QRect **actualPixmapRect** (const QModelIndex &index) const
- int **calculatethumbSizeToFit** (int ws)
- [ItemCategoryDrawer](#) \* **categoryDrawer** () const
- QRect **commentsRect** () const
- QRect **coordinatesIndicatorRect** () const
- QRect **groupIndicatorRect** () const
- QRect [imageInformationRect](#) () const override  
*Returns the area where the image information is drawn, or null if empty / not supported.*
- void **paint** (QPainter \*painter, const QStyleOptionViewItem &option, const QModelIndex &index) const override
- QPixmap [pixmapForDrag](#) (const QStyleOptionViewItem &option, const QList< QModelIndex > &indexes) const override
- QRect [pixmapRect](#) () const override  
*Returns the area where the pixmap is drawn, or null if not supported.*
- void [setDefaultViewOptions](#) (const QStyleOptionViewItem &option) override  
*Style option with standard values to use for cached rendering.*
- void [setSpacing](#) (int spacing) override
- void **setView** ([ItemCategorizedView](#) \*view)
- QRect **tagsRect** () const

## Public Member Functions inherited from [Digikam::ItemViewDelegate](#)

- **ItemViewDelegate** (QWidget \*const parent)
- bool [acceptsActivation](#) (const QPoint &pos, const QRect &visualRect, const QModelIndex &index, QRect \*activationRect=nullptr) const override
- bool [acceptsToolTip](#) (const QPoint &pos, const QRect &visualRect, const QModelIndex &index, QRect \*tooltipRect=nullptr) const override  
*These methods take four parameters: The position on viewport, the rect on viewport, the index, and optionally a parameter into which, if the return value is true, a rectangle can be written for which the return value will be true as well.*
- double **displayRatio** () const
- QSize [gridSize](#) () const override  
*Returns the gridsize to be set by the view.*
- void [mouseMoved](#) (QMouseEvent \*e, const QRect &visualRect, const QModelIndex &index) override
- virtual QRect **ratingRect** () const  
*Returns the rectangle where the rating is drawn, or a null rectangle if not supported.*
- QRect **rect** () const
- void [setDefaultViewOptions](#) (const QStyleOptionViewItem &option) override  
*Style option with standard values to use for cached rendering.*
- void [setRatingEdited](#) (const QModelIndex &index)  
*Can be used to temporarily disable drawing of the rating.*
- void [setSpacing](#) (int spacing) override
- void [setThumbnailSize](#) (const [ThumbnailSize](#) &thumbSize) override  
*You must set these options from the view.*
- QSize **sizeHint** (const QStyleOptionViewItem &option, const QModelIndex &index) const override
- int **spacing** () const
- [ThumbnailSize](#) **thumbnailSize** () const

## Public Member Functions inherited from [Digikam::DItemDelegate](#)

- **DItemDelegate** (QObject \*const parent=nullptr)

## Public Member Functions inherited from [Digikam::ItemDelegateOverlayContainer](#)

- **ItemDelegateOverlayContainer** ()=default  
*This is a sample implementation for delegate management methods, to be inherited by a delegate.*
- void **installOverlay** ([ItemDelegateOverlay](#) \*overlay)
- void **mouseMoved** (QMouseEvent \*e, const QRect &visualRect, const QModelIndex &index)
- QList< [ItemDelegateOverlay](#) \* > **overlays** () const
- void **removeAllOverlays** ()
- void **removeOverlay** ([ItemDelegateOverlay](#) \*overlay)
- void **setAllOverlaysActive** (bool active)
- void **setViewOnAllOverlays** (QAbstractItemView \*view)

## Static Public Member Functions

- static QPixmap **retrieveThumbnailPixmap** (const QModelIndex &index, int thumbnailSize)  
*Retrieve the thumbnail pixmap in given size for the [ItemModel::ThumbnailRole](#) for the given index from the given index, which must adhere to [ItemThumbnailModel](#) semantics.*

## Static Public Member Functions inherited from [Digikam::DItemDelegate](#)

- static QString **dateToString** (const QDateTime &datetime)
- static QPixmap **makeDragPixmap** (const QStyleOptionViewItem &option, const QList< QModelIndex > &indexes, double displayRatio, const QPixmap &suggestedPixmap=QPixmap())
- static QString **squeezedText** (const QFontMetrics &fm, int width, const QString &text)

## Protected Slots

- void **modelChanged** ()
- void **modelContentsChanged** ()

## Protected Slots inherited from [Digikam::ItemViewDelegate](#)

- void **overlayDestroyed** (QObject \*o) override
- void **slotSetupChanged** ()
- void **slotThemeChanged** ()

## Protected Member Functions

- **ItemDelegate** (ItemDelegate::ItemDelegatePrivate &dd, QWidget \*const parent)
- void **clearCaches** () override
- virtual void **clearModelDataCaches** ()
 

*Reimplement to clear caches based on model indexes (hash on row number etc.) Change signals are listened to this is called whenever such properties become invalid.*
- void **invalidatePaintingCache** () override
- bool **onActualPixmapRect** (const QPoint &pos, const QRect &visualRect, const QModelIndex &index, QRect \*actualRect) const
- void **setModel** (QAbstractItemModel \*model)
- virtual QPixmap **thumbnailPixmap** (const QModelIndex &index) const
- void **updateActualPixmapRect** (const QModelIndex &index, const QRect &rect)
- virtual void **updateContentWidth** ()
 

*Reimplement this to set contentWidth.*
- virtual void **updateRects** ()=0
 

*In a subclass, you need to implement this method to set up the rects for drawing.*
- void **updateSizeRectsAndPxmmaps** () override

## Protected Member Functions inherited from [Digikam::ItemViewDelegate](#)

- **ItemViewDelegate** (ItemViewDelegatePrivate &dd, QWidget \*const parent)
- QAbstractItemDelegate \* **asDelegate** () override
 

*Returns the delegate, typically, the derived class.*
- void **drawAspectRatio** (QPainter \*p, const QRect &dimsRect, const QSize &dims) const
- void **drawColorLabelLine** (QPainter \*p, const QRect &pixRect, int colorId) const
- void **drawComments** (QPainter \*p, const QRect &commentsRect, const QString &comments) const
- void **drawCreationDate** (QPainter \*p, const QRect &dateRect, const QDateTime &date) const
- void **drawFileSize** (QPainter \*p, const QRect &r, qlonglong bytes) const
- void **drawFocusRect** (QPainter \*p, const QStyleOptionViewItem &option, bool isSelected) const
- void **drawGeolocationIndicator** (QPainter \*p, const QRect &r) const
- void **drawGroupIndicator** (QPainter \*p, const QRect &r, int numberOfGroupedImages, bool open) const
- void **drawImageFormat** (QPainter \*p, const QRect &r, const QString &f, bool drawTop) const
- void **drawImageSize** (QPainter \*p, const QRect &dimsRect, const QSize &dims) const
- void **drawModificationDate** (QPainter \*p, const QRect &dateRect, const QDateTime &date) const
- void **drawMouseOverRect** (QPainter \*p, const QStyleOptionViewItem &option) const
- void **drawName** (QPainter \*p, const QRect &nameRect, const QString &name) const
- void **drawPanelSidelcon** (QPainter \*p, bool left, bool right) const
- void **drawPickLabelIcon** (QPainter \*p, const QRect &r, int pickLabel) const
- void **drawRating** (QPainter \*p, const QModelIndex &index, const QRect &ratingRect, int rating, bool isSelected) const
- void **drawSpecialInfo** (QPainter \*p, const QRect &r, const QString &text) const
- void **drawTags** (QPainter \*p, const QRect &r, const QString &tagsString, bool isSelected) const
- QRect **drawThumbnail** (QPainter \*p, const QRect &thumbRect, const QPixmap &background, const QPixmap &thumbnail, bool isGrouped) const
 

*Use the tool methods for painting in subclasses.*
- void **drawTitle** (QPainter \*p, const QRect &titleRect, const QString &title) const
- void **prepareBackground** ()
- void **prepareFonts** ()
- void **prepareMetrics** (int maxWidth)
- void **prepareRatingPxmmaps** (bool composeOverBackground=true)
- QPixmap **ratingPixmap** (int rating, bool selected) const
 

*Returns the relevant pixmap from the cached rating pxmaps.*

## Protected Member Functions inherited from [Digikam::DItemDelegate](#)

- QString **squeezedTextCached** (QPainter \*const p, int width, const QString &text) const
- QPixmap **thumbnailBorderPixmap** (const QSize &pixSize, bool isGrouped=false) const

## Protected Member Functions inherited from [Digikam::ItemDelegateOverlayContainer](#)

- virtual void **drawOverlays** (QPainter \*p, const QStyleOptionViewItem &option, const QModelIndex &index) const
- virtual void **overlayDestroyed** (QObject \*o)

*Declare as slot in the derived class calling this method.*

## Additional Inherited Members

## Signals inherited from [Digikam::ItemViewDelegate](#)

- void **hideNotification** ()
- void **requestNotification** (const QModelIndex &index, const QString &message)

## Signals inherited from [Digikam::DItemDelegate](#)

- void **gridSizeChanged** (const QSize &newSize)
- void **visualChange** ()

## Protected Attributes inherited from [Digikam::ItemViewDelegate](#)

- ItemViewDelegatePrivate \*const **d\_ptr** = nullptr

## Protected Attributes inherited from [Digikam::ItemDelegateOverlayContainer](#)

- QList< [ItemDelegateOverlay](#) \* > **m\_overlays**

## 9.801.1 Member Function Documentation

### 9.801.1.1 acceptsActivation()

```
bool Digikam::ItemDelegate::acceptsActivation (
    const QPoint & pos,
    const QRect & visualRect,
    const QModelIndex & index,
    QRect * activationRect = nullptr ) const [override], [virtual]
```

Implements [Digikam::DItemDelegate](#).

### 9.801.1.2 acceptsToolTip()

```
bool Digikam::ItemDelegate::acceptsToolTip (
    const QPoint & pos,
    const QRect & visualRect,
    const QModelIndex & index,
    QRect * tooltipRect = nullptr ) const [override], [virtual]
```

Implements [Digikam::DItemDelegate](#).

### 9.801.1.3 clearCaches()

```
void Digikam::ItemDelegate::clearCaches ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::DItemDelegate](#).

### 9.801.1.4 imageInformationRect()

```
QRect Digikam::ItemDelegate::imageInformationRect ( ) const [override], [virtual]
```

The image information is textual or graphical information, but not the pixmap. The [ratingRect\(\)](#) will e.g. typically be contained in this area.

Reimplemented from [Digikam::ItemViewDelegate](#).

### 9.801.1.5 invalidatePaintingCache()

```
void Digikam::ItemDelegate::invalidatePaintingCache ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemViewDelegate](#).

### 9.801.1.6 pixmapForDrag()

```
QPixmap Digikam::ItemDelegate::pixmapForDrag (
    const QStyleOptionViewItem & option,
    const QList< QModelIndex > & indexes ) const [override], [virtual]
```

Implements [Digikam::DItemDelegate](#).

### 9.801.1.7 pixmapRect()

```
QRect Digikam::ItemDelegate::pixmapRect ( ) const [override], [virtual]
```

Reimplemented from [Digikam::ItemViewDelegate](#).

### 9.801.1.8 setDefaultViewOptions()

```
void Digikam::ItemDelegate::setDefaultViewOptions (
    const QStyleOptionViewItem & option ) [override], [virtual]
```

option.rect shall be the viewport rectangle. Call on resize, font change.

Implements [Digikam::DItemDelegate](#).

Reimplemented in [Digikam::ItemThumbnailDelegate](#).

### 9.801.1.9 setSpacing()

```
void Digikam::ItemDelegate::setSpacing (
    int spacing ) [override], [virtual]
```

Implements [Digikam::DItemDelegate](#).

### 9.801.1.10 updateContentWidth()

```
void Digikam::ItemDelegate::updateContentWidth ( ) [protected], [virtual]
```

This is the maximum width of all content rectangles, typically excluding margins on both sides.

Reimplemented in [Digikam::ItemThumbnailDelegate](#).

### 9.801.1.11 updateRects()

```
virtual void Digikam::ItemDelegate::updateRects ( ) [protected], [pure virtual]
```

The paint() method operates depending on these rects.

Implemented in [Digikam::DigikamItemDelegate](#), [Digikam::ItemFaceDelegate](#), and [Digikam::ItemThumbnailDelegate](#).

### 9.801.1.12 updateSizeRectsAndPixmapes()

```
void Digikam::ItemDelegate::updateSizeRectsAndPixmapes ( ) [override], [protected], [virtual]
```

Implements [Digikam::ItemViewDelegate](#).

## Protected Member Functions

- `QList< QModelIndex > affectedIndexes (const QModelIndex &index) const`
- `bool affectsMultiple (const QModelIndex &index) const`

*For the context that an overlay can affect multiple items: Assuming the currently overlaid index is given.*

- `int numberOfAffectedIndexes (const QModelIndex &index) const`
- `bool viewHasMultiSelection () const`

*Utility method.*

## Protected Attributes

- `QAbstractItemDelegate * m_delegate = nullptr`
- `QAbstractItemView * m_view = nullptr`

## 9.802.1 Member Function Documentation

### 9.802.1.1 affectsMultiple()

```
bool Digikam::ItemDelegateOverlay::affectsMultiple (
    const QModelIndex & index ) const [protected]
```

Will an operation affect only the single item, or multiple? If multiple, retrieve the affected selection.

### 9.802.1.2 mouseMoved()

```
void Digikam::ItemDelegateOverlay::mouseMoved (
    QMouseEvent * e,
    const QRect & visualRect,
    const QModelIndex & index ) [virtual]
```

For all other events, connect to the view's signals. There are a few signals specifically for overlays and all `QAbstractItemView` standard signals.

### 9.802.1.3 setActive()

```
void Digikam::ItemDelegateOverlay::setActive (
    bool active ) [virtual]
```

[Setup](#) your connections to view and delegate here. You will be disconnected automatically on removal.

Reimplemented in [Digikam::FaceRejectionOverlay](#), [Digikam::ItemCoordinatesOverlay](#), [Digikam::ItemFullScreenOverlay](#), [Digikam::ItemRotateOverlay](#), [Digikam::ItemSelectionOverlay](#), [Digikam::ShowHideVersionsOverlay](#), [Digikam::ActionVersionsOverlay](#), [Digikam::AbstractWidgetDelegateOverlay](#), [Digikam::HoverButtonDelegateOverlay](#), [Digikam::PersistentWidgetDelegateOverlay](#), [ShowFoto::ShowfotoCoordinatesOverlay](#), [Digikam::ImportCoordinatesOverlay](#), [Digikam::ImportLockOverlay](#), [Digikam::ImportDownloadOverlay](#), [Digikam::ImportRotateOverlay](#), [Digikam::AssignNameOverlay](#), [Digikam::GroupIndicatorOverlay](#), [Digikam::ItemRatingOverlay](#), [Digikam::TagsLineEditOverlay](#), and [Digikam::ImportRatingOverlay](#).

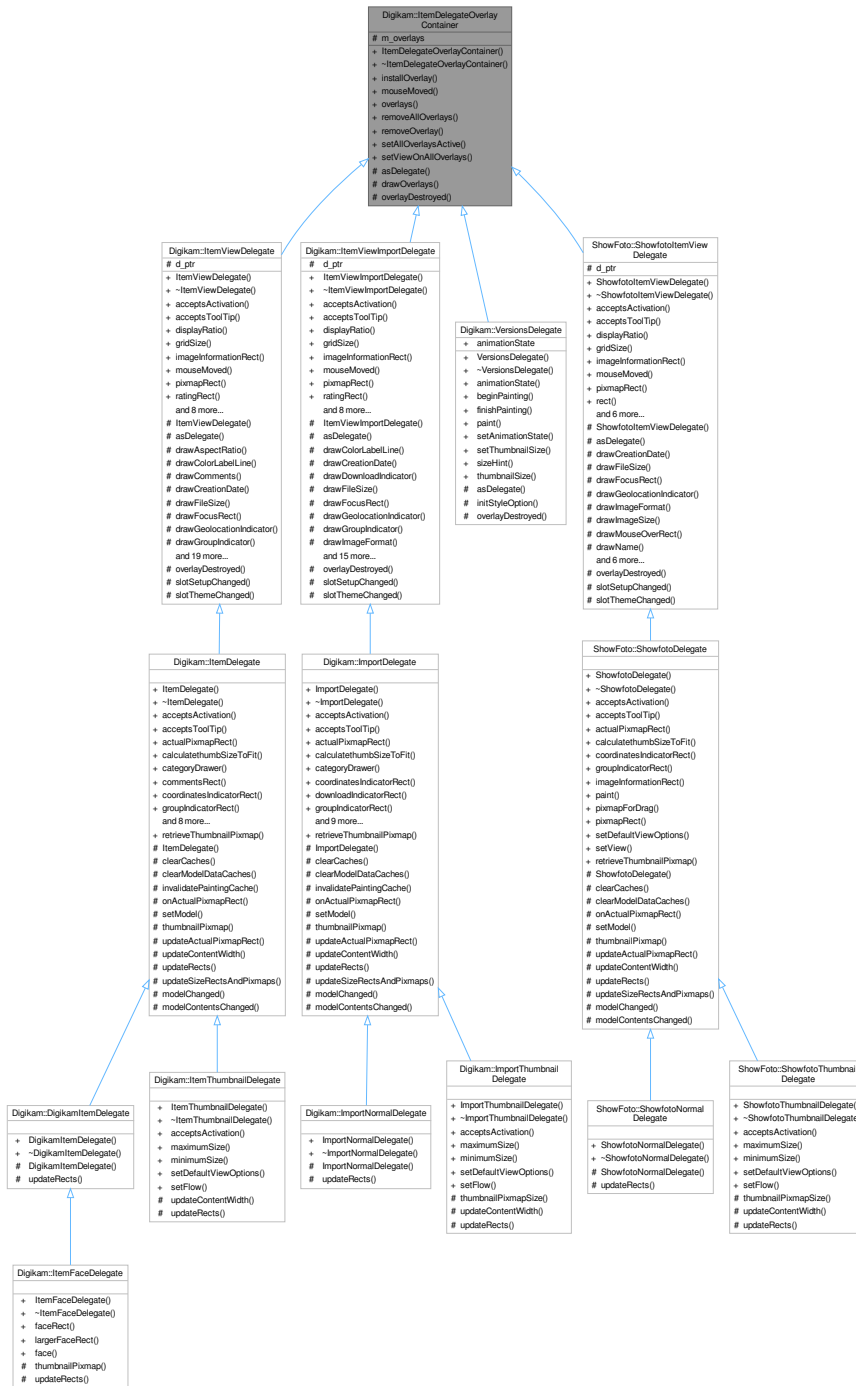

#### 9.802.1.4 visualChange

```
void Digikam::ItemDelegateOverlay::visualChange ( ) [protected], [virtual], [slot]
```

Reimplemented in [Digikam::AssignNameOverlay](#), [Digikam::GroupIndicatorOverlay](#), [Digikam::ItemCoordinatesOverlay](#), [Digikam::ItemRatingOverlay](#), [Digikam::TagsLineEditOverlay](#), [Digikam::HoverButtonDelegateOverlay](#), [ShowFoto::ShowfotoCoordinatesOverlay](#), [Digikam::ImportCoordinatesOverlay](#), [Digikam::ImportLockOverlay](#), [Digikam::ImportDownloadOverlay](#), and [Digikam::ImportRatingOverlay](#).

# 9.803 Digikam::ItemDelegateOverlayContainer Class Reference

Inheritance diagram for Digikam::ItemDelegateOverlayContainer:

## Public Member Functions

- `ItemDelegateOverlayContainer()`=default

*This is a sample implementation for delegate management methods, to be inherited by a delegate.*

- void **installOverlay** ([ItemDelegateOverlay](#) \*overlay)
- void **mouseMoved** (QMouseEvent \*e, const QRect &visualRect, const QModelIndex &index)
- QList< [ItemDelegateOverlay](#) \* > **overlays** () const
- void **removeAllOverlays** ()
- void **removeOverlay** ([ItemDelegateOverlay](#) \*overlay)
- void **setAllOverlaysActive** (bool active)
- void **setViewOnAllOverlays** (QAbstractItemView \*view)

### Protected Member Functions

- virtual QAbstractItemDelegate \* **asDelegate** ()=0  
*Returns the delegate, typically, the derived class.*
- virtual void **drawOverlays** (QPainter \*p, const QStyleOptionViewItem &option, const QModelIndex &index) const
- virtual void **overlayDestroyed** (QObject \*o)  
*Declare as slot in the derived class calling this method.*

### Protected Attributes

- QList< [ItemDelegateOverlay](#) \* > **m\_overlays**

## 9.803.1 Constructor & Destructor Documentation

### 9.803.1.1 ItemDelegateOverlayContainer()

```
Digikam::ItemDelegateOverlayContainer::ItemDelegateOverlayContainer ( ) [default]
```

Does not inherit QObject, the delegate already does.

## 9.803.2 Member Function Documentation

### 9.803.2.1 asDelegate()

```
virtual QAbstractItemDelegate * Digikam::ItemDelegateOverlayContainer::asDelegate ( ) [protected],  
[pure virtual]
```

Implemented in [Digikam::VersionsDelegate](#), [Digikam::ItemViewDelegate](#), [ShowFoto::ShowfotoItemViewDelegate](#), and [Digikam::ItemViewImportDelegate](#).

## 9.804 Digikam::ItemDescEditTab Class Reference

Inheritance diagram for Digikam::ItemDescEditTab:

### Public Types

- enum `DescEditTab` { `DESCRIPTIONS = 0` , `TAGS` , `INFOS` }

## Signals

- void **signalAskToApplyChanges** (const QList< [ItemInfo](#) > &infos, [DisjointMetadata](#) \*hub)

- **DVBox** (QWidget \*const parent=nullptr)

## Public Member Functions inherited from [Digikam::DHBox](#)

- **DHBox** (QWidget \*const parent=nullptr)
- QSize **minimumSizeHint** () const override
- void **setContentsMargins** (const QMargins &margins)
- void **setContentsMargins** (int left, int top, int right, int bottom)
- void **setSpacing** (int space)
- void **setStretchFactor** (QWidget \*const widget, int stretch)
- QSize **sizeHint** () const override

## Protected Member Functions

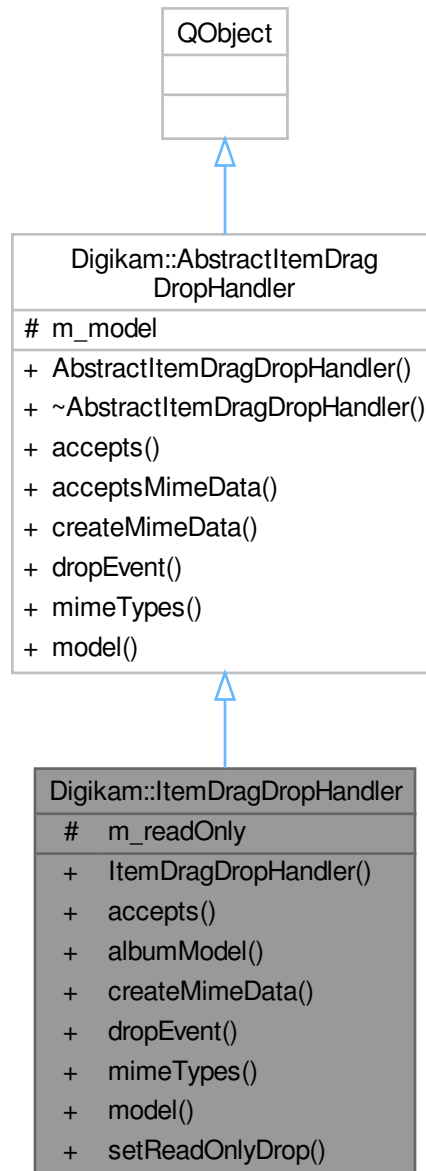

- bool **eventFilter** (QObject \*o, QEvent \*e) override

## Protected Member Functions inherited from [Digikam::DHBox](#)

- **DHBox** (bool vertical, QWidget \*const parent)
- void **childEvent** (QChildEvent \*e) override
  
- class **Private**
  
- void **assignColorLabel** (int colorId)  
*Description view methods (itemdesceditab\_descview.cpp)*
- void **assignPickLabel** (int pickId)
- void **assignRating** (int rating)
- void **setFocusToTitlesEdit** ()
- void **setFocusToCommentsEdit** ()
- void **replaceColorLabel** (int colorId)
- void **replacePickLabel** (int pickId)
- void **replaceRating** (int rating)
  
- void **populateTags** ()  
*Tags view methods (itemdesceditab\_tagview.cpp)*
- void **setFocusToTagsView** ()
- void **setFocusToNewTagEdit** ()
- void **activateAssignedTagsButton** ()
- [AddTagsLineEdit](#) \* **getNewTagEdit** () const
- void **signalTagFilterMatch** (bool)

## 9.805 Digikam::ItemDragDropHandler Class Reference

Inheritance diagram for Digikam::ItemDragDropHandler:

### Signals

- void **addToGroup** (const [ItemInfo](#) &pick, const QList< [ItemInfo](#) > &infos)
- void **assignTags** (const QList< [ItemInfo](#) > &list, const QList< int > &tagIDs)
- void **dragDropSort** (const [ItemInfo](#) &pick, const QList< [ItemInfo](#) > &infos)
- void **itemInfosDropped** (const QList< [ItemInfo](#) > &infos)
- void **urlsDropped** (const QList< QUrl > &urls)

## Public Member Functions

- **ItemDragDropHandler** ([ItemModel](#) \*const model)
- Qt::DropAction **accepts** (const QDropEvent \*e, const QModelIndex &dropIndex) override  
*Returns if the given mime data is accepted for drop on dropIndex.*
- [ItemAlbumModel](#) \* **albumModel** () const
- QMimeData \* **createMimeData** (const QList< QModelIndex > &) override  
*Create a mime data object for starting a drag from the given Albums.*
- bool **dropEvent** (QAbstractItemView \*view, const QDropEvent \*e, const QModelIndex &droppedOn) override  
*Gives the view and the occurring drop event.*
- QStringList **mimeTypes** () const override  
*Returns the supported mime types.*
- [ItemModel](#) \* **model** () const
- void **setReadOnlyDrop** (bool readOnly)  
*Enables a mode in which dropping will never start an operation which copies or moves files on disk.*

## Public Member Functions inherited from [Digikam::AbstractItemDragDropHandler](#)

- **AbstractItemDragDropHandler** (QAbstractItemModel \*const model)
- virtual bool **acceptsMimeData** (const QMimeData \*data)  
*Returns if the given mime data can be handled.*
- QAbstractItemModel \* **model** () const

## Protected Attributes

- bool **m\_readOnly** = false

## Protected Attributes inherited from [Digikam::AbstractItemDragDropHandler](#)

- QAbstractItemModel \* **m\_model** = nullptr

## 9.805.1 Member Function Documentation

### 9.805.1.1 accepts()

```
Qt::DropAction Digikam::ItemDragDropHandler::accepts (
    const QDropEvent * e,
    const QModelIndex & dropIndex ) [override], [virtual]
```

Returns the proposed action, or Qt::IgnoreAction if not accepted.

Reimplemented from [Digikam::AbstractItemDragDropHandler](#).

### 9.805.1.2 createMimeData()

```
QMimeData * Digikam::ItemDragDropHandler::createMimeData (
    const QList< QModelIndex > & ) [override], [virtual]
```

Reimplemented from [Digikam::AbstractItemDragDropHandler](#).

### 9.805.1.3 dropEvent()

```
bool Digikam::ItemDragDropHandler::dropEvent (
    QAbstractItemView * view,
    const QDropEvent * e,
    const QModelIndex & droppedOn ) [override], [virtual]
```

The index is the index where the drop was dropped on. It may be invalid (dropped on decoration, viewport) Returns true if the event is to be accepted.

Reimplemented from [Digikam::AbstractItemDragDropHandler](#).

### 9.805.1.4 mimeTypees()

```
QStringList Digikam::ItemDragDropHandler::mimeTypees ( ) const [override], [virtual]
```

Called by the default implementation of model's [mimeTypees\(\)](#).

Reimplemented from [Digikam::AbstractItemDragDropHandler](#).

### 9.805.1.5 setReadOnlyDrop()

```
void Digikam::ItemDragDropHandler::setReadOnlyDrop (
    bool readOnly )
```

Only the signals are emitted.

## 9.806 Digikam::ItemExtendedProperties Class Reference

### Public Member Functions

- **ItemExtendedProperties** ()=default  
*Create a null [ItemExtendedProperties](#) object.*
- **ItemExtendedProperties** (qulonglong imageid)
- QString [intellectualGenre](#) ()  
*Return the Intellectual Genre.*
- QString [jobId](#) ()  
*Returns the Job ID.*
- [IptcCoreLocationInfo](#) [location](#) ()  
*Return the IPTC Core Location.*
- void **removeIntellectualGenre** ()
- void **removeJobId** ()
- void **removeLocation** ()
- void **removeScene** ()
- void **removeSimilarityTo** (const qulonglong imageid)
- void **removeSubjectCode** ()
- QStringList [scene](#) ()  
*Returns the Scene.*
- void **setIntellectualGenre** (const QString &[intellectualGenre](#))
- void **setJobId** (const QString &[jobId](#))
- void **setLocation** (const [IptcCoreLocationInfo](#) &[location](#))
- void **setScene** (const QStringList &[scene](#))
- void **setSimilarityTo** (const qulonglong imageid, const double value)
- void **setSubjectCode** (const QStringList &[subjectCode](#))
- double [similarityTo](#) (const qulonglong imageid)  
*Returns the similarity.*
- QStringList [subjectCode](#) ()  
*Returns the Subject Code.*

## Protected Member Functions

- `QStringList readFakeListProperty` (const `QString` &property)
- `QString readProperty` (const `QString` &property)
- `void removeProperty` (const `QString` &property)
- `void setFakeListProperty` (const `QString` &property, const `QStringList` &value)
- `void setProperty` (const `QString` &property, const `QString` &value)

## Protected Attributes

- `qlonglong m_id = 0`

## 9.806.1 Member Function Documentation

### 9.806.1.1 intellectualGenre()

```
QString Digikam::ItemExtendedProperties::intellectualGenre ( )
```

This is Photoshop Object Attribute Reference. “ Describes the nature, intellectual or journalistic characteristic of a news object, not specifically its content. Note / Examples: Journalistic genres: actuality, interview, background, feature, summary, wrapup News category related genres: daybook, obituary, press release, transcript It is advised to use terms from a controlled vocabulary.”

### 9.806.1.2 jobId()

```
QString Digikam::ItemExtendedProperties::jobId ( )
```

This is Photoshop Transmission Reference. This is IPTC Original Transmission Reference “ Number or identifier for the purpose of improved workflow handling. This ID should be added by the creator or provider for transmission and routing purposes only and should have no significance for archiving.”

### 9.806.1.3 location()

```
IptcCoreLocationInfo Digikam::ItemExtendedProperties::location ( )
```

This includes Country, Country Code, City, Location and ProvinceState. This includes IPTC Country Name, Country Code, City, SubLocation and ProvinceState.

### 9.806.1.4 scene()

```
QStringList Digikam::ItemExtendedProperties::scene ( )
```

“ Describes the scene of a photo content. Specifies one ore more terms from the IPTC ‘Scene-NewsCodes’. Each Scene is represented as a string of 6 digits in an unordered list.”

**9.806.1.5 similarityTo()**

```
double Digikam::ItemExtendedProperties::similarityTo (
    const qlonglong imageId )
```

of the image to the given image.

**9.806.1.6 subjectCode()**

```
QStringList Digikam::ItemExtendedProperties::subjectCode ( )
```

This is IPTC Subject Reference. “ Specifies one or more Subjects from the IPTC ‘Subject-NewsCodes’ taxonomy to categorize the content. Each Subject is represented as a string of 8 digits in an unordered list. Note: Only Subjects from a controlled vocabulary should be used in this metadata element, free text has to be put into the Keyword element. More about IPTC Subject-NewsCodes at [www.newscodes.org](http://www.newscodes.org).”

## 9.807 Digikam::ItemFaceDelegate Class Reference

Inheritance diagram for Digikam::ItemFaceDelegate:

### Public Member Functions

- **ItemFaceDelegate** ([ItemCategorizedView](#) \*const parent)
- **QRect faceRect** (const QModelIndex &index) const
- **QRect largerFaceRect** (const QModelIndex &index) const

## Public Member Functions inherited from [Digikam::DigikamItemDelegate](#)

- **DigikamItemDelegate** ([ItemCategorizedView](#) \*const parent)

## Public Member Functions inherited from [Digikam::ItemDelegate](#)

- **ItemDelegate** (QWidget \*const parent)
- bool [acceptsActivation](#) (const QPoint &pos, const QRect &visualRect, const QModelIndex &index, QRect \*activationRect=nullptr) const override
- bool [acceptsToolTip](#) (const QPoint &pos, const QRect &visualRect, const QModelIndex &index, QRect \*tooltipRect=nullptr) const override
 

*These methods take four parameters: The position on viewport, the rect on viewport, the index, and optionally a parameter into which, if the return value is true, a rectangle can be written for which the return value will be true as well.*
- QRect **actualPixmapRect** (const QModelIndex &index) const
- int **calculatethumbSizeToFit** (int ws)
- [ItemCategoryDrawer](#) \* **categoryDrawer** () const
- QRect **commentsRect** () const
- QRect **coordinatesIndicatorRect** () const
- QRect **groupIndicatorRect** () const
- QRect [imageInformationRect](#) () const override
 

*Returns the area where the image information is drawn, or null if empty / not supported.*
- void **paint** (QPainter \*painter, const QStyleOptionViewItem &option, const QModelIndex &index) const override
- QPixmap [pixmapForDrag](#) (const QStyleOptionViewItem &option, const QList< QModelIndex > &indexes) const override
- QRect [pixmapRect](#) () const override
 

*Returns the area where the pixmap is drawn, or null if not supported.*
- void [setDefaultViewOptions](#) (const QStyleOptionViewItem &option) override
 

*Style option with standard values to use for cached rendering.*
- void [setSpacing](#) (int spacing) override
- void **setView** ([ItemCategorizedView](#) \*view)
- QRect **tagsRect** () const

## Public Member Functions inherited from [Digikam::ItemViewDelegate](#)

- **ItemViewDelegate** (QWidget \*const parent)
- bool [acceptsActivation](#) (const QPoint &pos, const QRect &visualRect, const QModelIndex &index, QRect \*activationRect=nullptr) const override
- bool [acceptsToolTip](#) (const QPoint &pos, const QRect &visualRect, const QModelIndex &index, QRect \*tooltipRect=nullptr) const override
 

*These methods take four parameters: The position on viewport, the rect on viewport, the index, and optionally a parameter into which, if the return value is true, a rectangle can be written for which the return value will be true as well.*
- double **displayRatio** () const
- QSize [gridSize](#) () const override
 

*Returns the gridsize to be set by the view.*
- void [mouseMoved](#) (QMouseEvent \*e, const QRect &visualRect, const QModelIndex &index) override
- virtual QRect **ratingRect** () const
 

*Returns the rectangle where the rating is drawn, or a null rectangle if not supported.*
- QRect **rect** () const
- void [setDefaultViewOptions](#) (const QStyleOptionViewItem &option) override

*Style option with standard values to use for cached rendering.*

- void [setRatingEdited](#) (const QModelIndex &index)  
*Can be used to temporarily disable drawing of the rating.*
- void [setSpacing](#) (int spacing) override
- void [setThumbnailSize](#) (const [ThumbnailSize](#) &thumbSize) override  
*You must set these options from the view.*
- QSize **sizeHint** (const QStyleOptionViewItem &option, const QModelIndex &index) const override
- int **spacing** () const
- [ThumbnailSize](#) **thumbnailSize** () const

## Public Member Functions inherited from [Digikam::DItemDelegate](#)

- [DItemDelegate](#) (QObject \*const parent=nullptr)

## Public Member Functions inherited from [Digikam::ItemDelegateOverlayContainer](#)

- [ItemDelegateOverlayContainer](#) ()=default  
*This is a sample implementation for delegate management methods, to be inherited by a delegate.*
- void **installOverlay** ([ItemDelegateOverlay](#) \*overlay)
- void **mouseMoved** (QMouseEvent \*e, const QRect &visualRect, const QModelIndex &index)
- QList< [ItemDelegateOverlay](#) \* > **overlays** () const
- void **removeAllOverlays** ()
- void **removeOverlay** ([ItemDelegateOverlay](#) \*overlay)
- void **setAllOverlaysActive** (bool active)
- void **setViewOnAllOverlays** (QAbstractItemView \*view)

## Static Public Member Functions

- static [FaceTagsIface](#) **face** (const QModelIndex &index)

## Static Public Member Functions inherited from [Digikam::ItemDelegate](#)

- static QPixmap **retrieveThumbnailPixmap** (const QModelIndex &index, int thumbnailSize)  
*Retrieve the thumbnail pixmap in given size for the [ItemModel::ThumbnailRole](#) for the given index from the given index, which must adhere to [ItemThumbnailModel](#) semantics.*

## Static Public Member Functions inherited from [Digikam::DItemDelegate](#)

- static QString **dateToString** (const QDateTime &datetime)
- static QPixmap **makeDragPixmap** (const QStyleOptionViewItem &option, const QList< QModelIndex > &indexes, double displayRatio, const QPixmap &suggestedPixmap=QPixmap())
- static QString **squeezedText** (const QFontMetrics &fm, int width, const QString &text)

## Protected Member Functions

- QPixmap [thumbnailPixmap](#) (const QModelIndex &index) const override
- void [updateRects](#) () override  
*In a subclass, you need to implement this method to set up the rects for drawing.*

## Protected Member Functions inherited from [Digikam::DigikamItemDelegate](#)

- **DigikamItemDelegate** (DigikamItemDelegatePrivate &dd, [ItemCategorizedView](#) \*parent)

## Protected Member Functions inherited from [Digikam::ItemDelegate](#)

- **ItemDelegate** (ItemDelegate::ItemDelegatePrivate &dd, QWidget \*const parent)
- void [clearCaches](#) () override
- virtual void **clearModelDataCaches** ()
  - Reimplement to clear caches based on model indexes (hash on row number etc.) Change signals are listened to this is called whenever such properties become invalid.*
- void [invalidatePaintingCache](#) () override
- bool **onActualPixmapRect** (const QPoint &pos, const QRect &visualRect, const QModelIndex &index, QRect \*actualRect) const
- void **setModel** (QAbstractItemModel \*model)
- void **updateActualPixmapRect** (const QModelIndex &index, const QRect &rect)
- virtual void [updateContentWidth](#) ()
  - Reimplement this to set contentWidth.*
- void [updateSizeRectsAndPxmmaps](#) () override

## Protected Member Functions inherited from [Digikam::ItemViewDelegate](#)

- **ItemViewDelegate** (ItemViewDelegatePrivate &dd, QWidget \*const parent)
- QAbstractItemDelegate \* [asDelegate](#) () override
  - Returns the delegate, typically, the derived class.*
- void **drawAspectRatio** (QPainter \*p, const QRect &dimsRect, const QSize &dims) const
- void **drawColorLabelLine** (QPainter \*p, const QRect &pixRect, int colorId) const
- void **drawComments** (QPainter \*p, const QRect &commentsRect, const QString &comments) const
- void **drawCreationDate** (QPainter \*p, const QRect &dateRect, const QDateTime &date) const
- void **drawFileSize** (QPainter \*p, const QRect &r, qlonglong bytes) const
- void **drawFocusRect** (QPainter \*p, const QStyleOptionViewItem &option, bool isSelected) const
- void **drawGeolocationIndicator** (QPainter \*p, const QRect &r) const
- void **drawGroupIndicator** (QPainter \*p, const QRect &r, int numberOfGroupedImages, bool open) const
- void **drawImageFormat** (QPainter \*p, const QRect &r, const QString &f, bool drawTop) const
- void **drawImageSize** (QPainter \*p, const QRect &dimsRect, const QSize &dims) const
- void **drawModificationDate** (QPainter \*p, const QRect &dateRect, const QDateTime &date) const
- void **drawMouseOverRect** (QPainter \*p, const QStyleOptionViewItem &option) const
- void **drawName** (QPainter \*p, const QRect &nameRect, const QString &name) const
- void **drawPanelSidelcon** (QPainter \*p, bool left, bool right) const
- void **drawPickLabelIcon** (QPainter \*p, const QRect &r, int pickLabel) const
- void **drawRating** (QPainter \*p, const QModelIndex &index, const QRect &ratingRect, int rating, bool isSelected) const
- void **drawSpecialInfo** (QPainter \*p, const QRect &r, const QString &text) const
- void **drawTags** (QPainter \*p, const QRect &r, const QString &tagsString, bool isSelected) const
- QRect **drawThumbnail** (QPainter \*p, const QRect &thumbRect, const QPixmap &background, const QPixmap &thumbnail, bool isGrouped) const
  - Use the tool methods for painting in subclasses.*
- void **drawTitle** (QPainter \*p, const QRect &titleRect, const QString &title) const
- void **prepareBackground** ()
- void **prepareFonts** ()
- void **prepareMetrics** (int maxWidth)
- void **prepareRatingPxmmaps** (bool composeOverBackground=true)
- QPixmap **ratingPixmap** (int rating, bool selected) const
  - Returns the relevant pixmap from the cached rating pxmaps.*

### Protected Member Functions inherited from [Digikam::DItemDelegate](#)

- QString **squeezedTextCached** (QPainter \*const p, int width, const QString &text) const
- QPixmap **thumbnailBorderPixmap** (const QSize &pixSize, bool isGrouped=false) const

### Protected Member Functions inherited from [Digikam::ItemDelegateOverlayContainer](#)

- virtual void **drawOverlays** (QPainter \*p, const QStyleOptionViewItem &option, const QModelIndex &index) const
- virtual void **overlayDestroyed** (QObject \*o)

*Declare as slot in the derived class calling this method.*

### Additional Inherited Members

### Signals inherited from [Digikam::ItemViewDelegate](#)

- void **hideNotification** ()
- void **requestNotification** (const QModelIndex &index, const QString &message)

### Signals inherited from [Digikam::DItemDelegate](#)

- void **gridSizeChanged** (const QSize &newSize)
- void **visualChange** ()

### Protected Slots inherited from [Digikam::ItemDelegate](#)

- void **modelChanged** ()
- void **modelContentsChanged** ()

### Protected Slots inherited from [Digikam::ItemViewDelegate](#)

## 9.807.1 Member Function Documentation

### 9.807.1.1 thumbnailPixmap()

```
QPixmap Digikam::ItemFaceDelegate::thumbnailPixmap (
    const QModelIndex & index ) const [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemDelegate](#).

### 9.807.1.2 updateRects()

```
void Digikam::ItemFaceDelegate::updateRects ( ) [override], [protected], [virtual]
```

The paint() method operates depending on these rects.

Reimplemented from [Digikam::DigikamItemDelegate](#).

## 9.808 Digikam::ItemFilterModel Class Reference

Inheritance diagram for Digikam::ItemFilterModel:

### Public Types

- enum `ItemFilterModelRoles` {
  - `CategorizationModeRole` = `ItemModel::FilterModelRoles + 1` , `SortOrderRole` = `ItemModel::FilterModelRoles`

```
+ 2 , CategoryAlbumIdRole = ItemModel::FilterModelRoles + 3 , CategoryFormatRole = ItemModel::FilterModelRoles + 4 ,
CategoryDateRole = ItemModel::FilterModelRoles + 5 , CategoryFaceRole = ItemModel::FilterModelRoles + 6 ,
GroupsOpenRole = ItemModel::FilterModelRoles + 7 , ItemFilterModelPointerRole = ItemModel::FilterModelRoles + 50 }
```

## Public Types inherited from [Digikam::DCategorizedSortFilterProxyModel](#)

- enum [AdditionalRoles](#) { [CategoryDisplayRole](#) = 0x17CE990A , [CategorySortRole](#) = 0x27857E60 }

## Public Slots

- void [setAllGroupsOpen](#) (bool open)
- void [setCategorizationMode](#) ([ItemSortSettings::CategorizationMode](#) mode)
- void [setCategorizationSortOrder](#) ([ItemSortSettings::SortOrder](#) order)
- void [setDayFilter](#) (const QList< QDateTime > &days)
  - Adjust the current [ItemFilterSettings](#).*
- void [setExceptionList](#) (const QList< qlonglong > &idlist, const QString &id)
- void [setGeolocationFilter](#) (const [ItemFilterSettings::GeolocationCondition](#) &condition)
- void [setGroupItemFilterSettings](#) (const [GroupItemFilterSettings](#) &settings)
  - Changes the current version image filter settings and refilters.*
- void [setGroupOpen](#) (qlonglong group, bool open)
- void [setIdWhitelist](#) (const QList< qlonglong > &idList, const QString &id)
- virtual void [setItemFilterSettings](#) (const [ItemFilterSettings](#) &settings)
  - Changes the current image filter settings and refilters.*
- virtual void [setItemSortSettings](#) (const [ItemSortSettings](#) &settings)
  - Changes the current image sort settings and resorts.*
- void [setMimeTypeFilter](#) (int mimeTypeFilter)
- void [setRatingFilter](#) (int rating, [ItemFilterSettings::RatingCondition](#) ratingCond, bool isUnratedExcluded)
- void [setSortOrder](#) ([ItemSortSettings::SortOrder](#) order)
- void [setSortRole](#) ([ItemSortSettings::SortRole](#) role)
- void [setStringTypeNatural](#) (bool natural)
- void [setTagFilter](#) (const QList< int > &includedTags, const QList< int > &excludedTags, [ItemFilterSettings::MatchingCondition](#) matchingCond, bool showUnTagged, const QList< int > &clTagIds, const QList< int > &plTagIds)
- void [setTextFilter](#) (const [SearchTextFilterSettings](#) &settings)
- void [setUriWhitelist](#) (const QList< QUrl > &urlList, const QString &id)
- void [setVersionItemFilterSettings](#) (const [VersionItemFilterSettings](#) &settings)
  - Changes the current version image filter settings and refilters.*
- void [setVersionManagerSettings](#) (const [VersionManagerSettings](#) &settings)
- void [toggleGroupOpen](#) (qlonglong group)

## Signals

- void [filterMatches](#) (bool matches)
  - Signals that the set filter matches at least one index.*
- void [filterMatchesForText](#) (bool matchesByText)
  - Signals that the set text filter matches at least one entry.*
- void [filterSettingsChanged](#) (const [ItemFilterSettings](#) &settings)
  - Emitted when the filter settings have been changed (the model may not yet have been updated)*
- void [imageInfosAboutToBeRemoved](#) (const QList< [ItemInfo](#) > &infos)
- void [imageInfosAdded](#) (const QList< [ItemInfo](#) > &infos)
  - These signals need to be explicitly enabled with [setSendItemInfoSignals\(\)](#)*

## Public Member Functions

- **ItemFilterModel** (QObject \*const parent=nullptr)
- void **addPrepareHook** ([ItemFilterModelPrepareHook](#) \*const hook)
 

*Add a hook to get added images for preparation tasks before they are added in the model.*
- QVariant **data** (const QModelIndex &index, int role=Qt::DisplayRole) const override
- [GroupItemFilterSettings](#) **groupItemFilterSettings** () const
- [ItemFilterModel](#) \* **imageFilterModel** () const override
 

*Returns this, any chained [ItemFilterModel](#), or 0.*
- [ItemFilterSettings](#) **imageFilterSettings** () const
- [ItemSortSettings](#) **imageSortSettings** () const
- bool **isAllGroupsOpen** () const
- bool **isGroupOpen** (qulonglong group) const
 

*group is identified by the id of its group leader*
- void **removePrepareHook** ([ItemFilterModelPrepareHook](#) \*const hook)
- void **setSendItemInfoSignals** (bool sendSignals)
 

*Enables sending [imageInfosAdded](#) and [imageInfosAboutToBeRemoved](#).*
- [DatabaseFields::Set](#) **suggestedWatchFlags** () const
 

*Returns a set of [DatabaseFields](#) suggested to set as watch flags on the source [ItemModel](#).*
- [VersionItemFilterSettings](#) **versionItemFilterSettings** () const

## Public Member Functions inherited from [Digikam::ImageSortFilterModel](#)

- **ImageSortFilterModel** (QObject \*const parent=nullptr)

## Protected Member Functions inherited from [Digikam::DCategorizedSortFilterProxyModel](#)

- bool [lessThan](#) (const QModelIndex &left, const QModelIndex &right) const override  
*Overridden from [QSortFilterProxyModel](#).*

## Protected Attributes

- ItemFilterModelPrivate \*const [d\\_ptr](#) = nullptr

## Protected Attributes inherited from [Digikam::ImageSortFilterModel](#)

- [ImageSortFilterModel](#) \* [m\\_chainedModel](#) = nullptr

## 9.808.1 Member Enumeration Documentation

### 9.808.1.1 ItemFilterModelRoles

```
enum Digikam::ItemFilterModel::ItemFilterModelRoles
```

#### Enumerator

CategorizationModeRole	Returns the current categorization mode.
SortOrderRole	Returns the current sort order.
CategoryAlbumIdRole	Returns the number of items in the index category. Returns the id of the <a href="#">PAlbum</a> of the index which is used for category
CategoryFormatRole	Returns the format of the index which is used for category.
CategoryDateRole	Returns the date of the index which is used for category.
CategoryFaceRole	Returns the suggested name for the face in this index.
GroupsOpenRole	Returns true if the given image is a group leader, and the group is opened.

## 9.808.2 Member Function Documentation

### 9.808.2.1 categoryIdentifier()

```
QString Digikam::ItemFilterModel::categoryIdentifier (
    const ItemInfo & info,
    const FaceTagsIface & face ) const [protected], [virtual]
```

The string need not be for user display.

### 9.808.2.2 compareCategories()

```
int Digikam::ItemFilterModel::compareCategories (
    const QModelIndex & left,
    const QModelIndex & right ) const [override], [protected], [virtual]
```

Internally and if not reimplemented, this method will ask for `left` and `right` models for role `CategorySortRole`. In order to correctly sort categories, the `data()` method of the model should return a `qulonglong` (or numeric) value, or a `QString` object. `QString` objects will be sorted with `QString::localeAwareCompare` if `sortCategoriesByNaturalComparison()` is true.

**Note**

Please have present that: `QString(QChar(QChar::ObjectReplacementCharacter)) > QString(QChar(QChar::ReplacementCharacter)) > [ all possible strings ] > QString();`

This means that `QString()` will be sorted the first one, while `QString(QChar(QChar::ObjectReplacementCharacter))` and `QString(QChar(QChar::ReplacementCharacter))` will be sorted in last position.

**Warning**

Please note that `data()` method of the model should return always information of the same type. If you return a `QString` for an index, you should return always `QStrings` for all indexes for role `CategorySortRole` in order to correctly sort categories. You can't mix by returning a `QString` for one index, and a `qlonglong` for other.

**Note**

If you need a more complex layout, you will have to reimplement this method.

**Returns**

A negative value if the category of `left` should be placed before the category of `right`. 0 if `left` and `right` are on the same category, and a positive value if the category of `left` should be placed after the category of `right`.

Reimplemented from [Digikam::DCategorizedSortFilterProxyModel](#).

**9.808.2.3 compareInfosCategories() [1/2]**

```
int Digikam::ItemFilterModel::compareInfosCategories (
    const ItemInfo & left,
    const ItemInfo & right ) const [protected], [virtual]
```

Reimplemented in [Digikam::ItemAlbumFilterModel](#).

**9.808.2.4 compareInfosCategories() [2/2]**

```
int Digikam::ItemFilterModel::compareInfosCategories (
    const ItemInfo & left,
    const ItemInfo & right,
    const FaceTagsIface & leftFace,
    const FaceTagsIface & rightFace ) const [protected], [virtual]
```

One image may have multiple Faces in it, hence just the `ItemInfo` isn't sufficient.

Reimplemented in [Digikam::ItemAlbumFilterModel](#).

**9.808.2.5 data()**

```
QVariant Digikam::ItemFilterModel::data (
    const QModelIndex & index,
    int role = Qt::DisplayRole ) const [override]
```

Keeping track of the Face (if any) associated with this Model Index is important to allow categorization by Face.

### 9.808.2.6 filterMatchesForText

```
void Digikam::ItemFilterModel::filterMatchesForText (
    bool matchesByText ) [signal]
```

If no text filter is set, this signal is emitted with 'false' when [filterMatches\(\)](#) is emitted.

### 9.808.2.7 imageFilterModel()

```
ItemFilterModel * Digikam::ItemFilterModel::imageFilterModel ( ) const [override], [virtual]
```

Reimplemented from [Digikam::ImageSortFilterModel](#).

### 9.808.2.8 infosLessThan()

```
bool Digikam::ItemFilterModel::infosLessThan (
    const ItemInfo & left,
    const ItemInfo & right ) const [protected], [virtual]
```

Do not take categories into account here.

### 9.808.2.9 setDayFilter

```
void Digikam::ItemFilterModel::setDayFilter (
    const QList< QDateTime > & days ) [slot]
```

Equivalent to retrieving the current filter settings, adjusting the parameter and calling [setItemFilterSettings](#). Provided for convenience. It is encouraged to use [setItemFilterSettings](#) if you change more than one parameter at a time.

### 9.808.2.10 setDirectSourceItemModel()

```
void Digikam::ItemFilterModel::setDirectSourceItemModel (
    ItemModel *const model ) [override], [protected], [virtual]
```

Called only when model shall be set as (direct) sourceModel.

Reimplemented from [Digikam::ImageSortFilterModel](#).

### 9.808.2.11 setItemFilterSettings

```
void Digikam::ItemFilterModel::setItemFilterSettings (
    const ItemFilterSettings & settings ) [virtual], [slot]
```

Reimplemented in [Digikam::ItemAlbumFilterModel](#).

### 9.808.2.12 subSortLessThan()

```
bool Digikam::ItemFilterModel::subSortLessThan (
    const QModelIndex & left,
    const QModelIndex & right ) const [override], [protected], [virtual]
```

It is used for sorting items that are in the same category.

#### Returns

Returns true if the item `left` is less than the item `right` when sorting.

Reimplemented from [Digikam::DCategorizedSortFilterProxyModel](#).

### 9.808.2.13 suggestedWatchFlags()

```
DatabaseFields::Set Digikam::ItemFilterModel::suggestedWatchFlags ( ) const
```

The contained flags will be those that this model can sort or filter by.

## 9.809 Digikam::ItemFilterModelFilterer Class Reference

Inheritance diagram for Digikam::ItemFilterModelFilterer:

    - Tags filter —
  - void **setTagNames** (const QHash< int, QString > &tagNameHash)
  - void **setTextFilter** (const [SearchTextFilterSettings](#) &settings)
    - Text filter —
  - void **setUrlWhitelist** (const QList< QUrl > &urlList, const QString &id)
    - URL whitelist filter
  - [DatabaseFields::Set](#) **watchFlags** () const
    - Change notification —

## 9.813.1 Member Function Documentation

### 9.813.1.1 matches()

```
bool Digikam::ItemFilterSettings::matches (
    const ItemInfo & info,
    bool *const foundText = nullptr ) const
```

Optionally, foundText is set to true if it matched by text search.

### 9.813.1.2 watchFlags()

```
DatabaseFields::Set Digikam::ItemFilterSettings::watchFlags ( ) const
```

Returns database fields a change in which would affect the current filtering. To find out if an image tag change affects filtering, test [isFilteringByTags\(\)](#). The text filter will also be affected by changes in tags and album names.

- `QAbstractItemView * m_view` = nullptr

## 9.817.1 Member Function Documentation

### 9.817.1.1 `checkIndex()`

```
bool Digikam::ItemFullScreenOverlay::checkIndex (
    const QModelIndex & index ) const [override], [protected], [virtual]
```

The default implementation returns true.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.817.1.2 `createButton()`

```
ItemViewHoverButton * Digikam::ItemFullScreenOverlay::createButton ( ) [override], [protected], [virtual]
```

Pass `view()` as parent.

Implements [Digikam::HoverButtonDelegateOverlay](#).

### 9.817.1.3 `setActive()`

```
void Digikam::ItemFullScreenOverlay::setActive (
    bool active ) [override], [virtual]
```

Reimplemented from [Digikam::HoverButtonDelegateOverlay](#).

### 9.817.1.4 `updateButton()`

```
void Digikam::ItemFullScreenOverlay::updateButton (
    const QModelIndex & index ) [override], [protected], [virtual]
```

Reposition your button here, adjust and store state.

Implements [Digikam::HoverButtonDelegateOverlay](#).

### 9.817.1.5 widgetEnterEvent()

```
void Digikam::ItemFullScreenOverlay::widgetEnterEvent ( ) [override], [protected], [virtual]
```

QEvent::Leave event for the widget is received. The default implementation does nothing.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.817.1.6 widgetLeaveEvent()

```
void Digikam::ItemFullScreenOverlay::widgetLeaveEvent ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

## 9.818 Digikam::ItemFullScreenOverlayButton Class Reference

Inheritance diagram for Digikam::ItemFullScreenOverlayButton:

### Public Member Functions

- **ItemFullScreenOverlayButton** (QAbstractItemView \*const parentView)
- QSize [sizeHint](#) () const override

## 9.818.1 Member Function Documentation

### 9.818.1.1 icon()

QIcon Digikam::ItemFullScreenOverlayButton::icon ( ) [override], [protected], [virtual]

Will be queried again on toggle.

Implements [Digikam::ItemViewHoverButton](#).

### 9.818.1.2 sizeHint()

```
QSize Digikam::ItemFullScreenOverlayButton::sizeHint ( ) const [override], [virtual]
```

Implements [Digikam::ItemViewHoverButton](#).

### 9.818.1.3 updateToolTip()

```
void Digikam::ItemFullScreenOverlayButton::updateToolTip ( ) [override], [protected], [virtual]
```

Will be called again on state change.

Reimplemented from [Digikam::ItemViewHoverButton](#).

## 9.819 Digikam::ItemGPS Class Reference

## 9.820.1 Member Function Documentation

### 9.820.1.1 [bestRepresentativeIndexFromList\(\)](#)

```
QPersistentModelIndex Digikam::ItemGPSModelHelper::bestRepresentativeIndexFromList (
    const QList< QPersistentModelIndex > & list,
    const int sortKey ) [override], [virtual]
```

Reimplemented from [Digikam::GeoModelHelper](#).

### 9.820.1.2 itemCoordinates()

```
bool Digikam::ItemGPSModelHelper::itemCoordinates (
    const QModelIndex & index,
    GeoCoordinates *const coordinates ) const [override], [virtual]
```

Implements [Digikam::GeoModelHelper](#).

### 9.820.1.3 model()

```
QAbstractItemModel * Digikam::ItemGPSModelHelper::model ( ) const [override], [virtual]
```

Implements [Digikam::GeoModelHelper](#).

### 9.820.1.4 pixmapFromRepresentativeIndex()

```
QPixmap Digikam::ItemGPSModelHelper::pixmapFromRepresentativeIndex (
    const QPersistentModelIndex & index,
    const QSize & size ) [override], [virtual]
```

Reimplemented from [Digikam::GeoModelHelper](#).

### 9.820.1.5 selectionModel()

```
QItemSelectionModel * Digikam::ItemGPSModelHelper::selectionModel ( ) const [override], [virtual]
```

Implements [Digikam::GeoModelHelper](#).

## 9.821 Digikam::ItemHistoryGraph Class Reference

### Public Types

- enum [HistoryLoadingFlag](#) { [LoadRelationCloud](#) = 1 << 0 , [LoadSubjectHistory](#) = 1 << 1 , [LoadLeavesHistory](#) = 1 << 2 , [LoadAll](#) = LoadRelationCloud | LoadSubjectHistory | LoadLeavesHistory }

- void **prepareForDisplay** (const [ItemInfo](#) &subject)  
*Combines [reduceEdges\(\)](#), [dropOrphans\(\)](#) and [sortForInfo\(\)](#).*
- void **reduceEdges** ()  
*Remove edges which provide only duplicate information (performs a transitive reduction).*
- [QList](#)< [QPair](#)< [qulonglong](#), [qulonglong](#) > > **relationCloud** () const  
*Returns all possible relations between images in this graph, the edges of the transitive closure.*
- [QPair](#)< [QList](#)< [qulonglong](#) >, [QList](#)< [qulonglong](#) > > **relationCloudParallel** () const
- [QList](#)< [ItemInfo](#) > **rootImages** () const  
*Returns image infos / ids from all root vertices in this graph, i.e.*
- void **sortForInfo** (const [ItemInfo](#) &subject)  
*Sort vertex information prioritizing for the given vertex.*

## Static Public Member Functions

- static [ItemHistoryGraph](#) **fromInfo** (const [ItemInfo](#) &info, [HistoryLoadingMode](#) loadingMode=[LoadAll](#), [ProcessingMode](#) processingMode=[PrepareForDisplay](#))  
*Convenience: Reads all available history for the given info from the database and returns the created graph.*

## 9.821.1 Member Enumeration Documentation

### 9.821.1.1 HistoryLoadingFlag

```
enum Digikam::ItemHistoryGraph::HistoryLoadingFlag
```

## Enumerator

LoadRelationCloud	Load the relation cloud to the graph. Will give all edges, but no further info.
LoadSubjectHistory	Will load the <a href="#">DImageHistory</a> of the given subject.
LoadLeavesHistory	Will load the <a href="#">DImageHistory</a> of all leave vertices of the graph.

## 9.821.2 Member Function Documentation

### 9.821.2.1 addHistory()

```
void Digikam::ItemHistoryGraph::addHistory (
    const DImageHistory & history,
    const ItemInfo & historySubject = ItemInfo\(\) )
```

The optionally given info or id is used as the "current" image of the history. If you read a history from a file's metadata or the database, you shall give the relevant subject.

### 9.821.2.2 addRelations()

```
void Digikam::ItemHistoryGraph::addRelations (
    const QList< QPair< qlonglong, qlonglong > > & pairs )
```

Each pair (a,b) means "a is derived from b".

### 9.821.2.3 addScannedHistory()

```
void Digikam::ItemHistoryGraph::addScannedHistory (
    const DImageHistory & history,
    qlonglong historySubjectId )
```

The only difference is that no attempt is made to retrieve an [ItemInfo](#) for the historySubjectId. Can be useful in the context of scanning

### 9.821.2.4 categorize()

```
QHash< ItemInfo, HistoryImageId::Types > Digikam::ItemHistoryGraph::categorize ( ) const
```

The type will be invalid if no decision can be made due to conflicting data.

### 9.821.2.5 fromInfo()

```
ItemHistoryGraph Digikam::ItemHistoryGraph::fromInfo (
    const ItemInfo & info,
    HistoryLoadingMode loadingMode = LoadAll,
    ProcessingMode processingMode = PrepareForDisplay ) [static]
```

Depending on mode, the graph will be preparedForDisplay(). If no history is recorded and no relations found, a single-vertex graph is returned.

### 9.821.2.6 hasEdges()

```
bool Digikam::ItemHistoryGraph::hasEdges ( ) const
```

Because loops are not allowed, this also means (!isEmpty() && !isSingleVertex()).

### 9.821.2.7 leafImages()

```
QList< ItemInfo > Digikam::ItemHistoryGraph::leafImages ( ) const
```

vertices with no subsequent history.

### 9.821.2.8 reduceEdges()

```
void Digikam::ItemHistoryGraph::reduceEdges ( )
```

Especially call this when [addRelations\(\)](#) was used.

### 9.821.2.9 relationCloud()

```
QList< QPair< qlonglong, qlonglong > > Digikam::ItemHistoryGraph::relationCloud ( ) const
```

The first variant returns (1,2),(3,4),(6,8), the second (1,3,6)(2,4,8).

### 9.821.2.10 rootImages()

```
QList< ItemInfo > Digikam::ItemHistoryGraph::rootImages ( ) const
```

vertices with no precedent history.

## 9.823.1 Member Function Documentation

### 9.823.1.1 `imageModel()`

```
ItemListModel * Digikam::ItemHistoryGraphModel::imageModel ( ) const
```

Note: Set a thumbnail thread on this model if you need thumbnails.

### 9.823.1.2 `imageModelIndex()`

```
QModelIndex Digikam::ItemHistoryGraphModel::imageModelIndex (
    const QModelIndex & index ) const
```

Otherwise an invalid index is returned.

### 9.823.1.3 `indexForInfo()`

```
QModelIndex Digikam::ItemHistoryGraphModel::indexForInfo (
    const ItemInfo & info ) const
```

The index found first is returned.

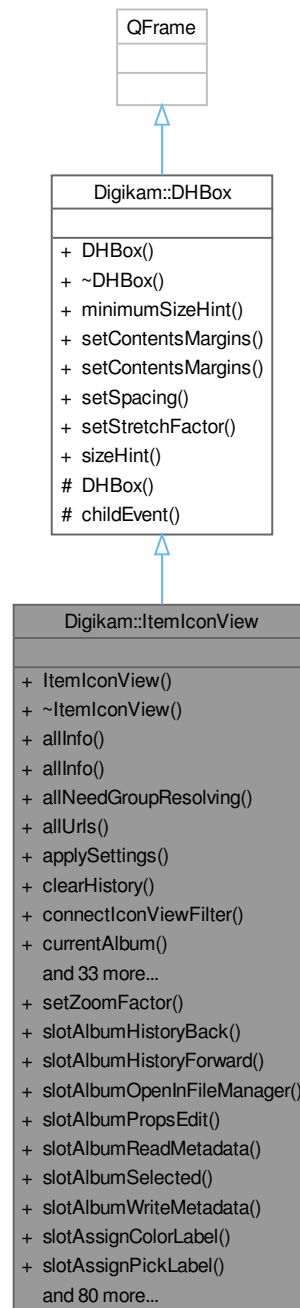

### 9.823.1.4 `setHistory()`

```
void Digikam::ItemHistoryGraphModel::setHistory (
    const ItemInfo & subject,
    const ItemHistoryGraph & graph = ItemHistoryGraph() )
```

Per default, the subject's history graph is read.

## 9.824.1 Member Function Documentation

### 9.824.1.1 allNeedGroupResolving()

```
bool Digikam::ItemIconView::allNeedGroupResolving (
    const OperationType type ) const
```

Query whether the operation to be performed on currently selected or all all items in the currently active view should be performed on all grouped items or just the first.

### 9.824.1.2 allUrls()

```
QList< QUrl > Digikam::ItemIconView::allUrls (
    bool grouping = false ) const
```

Whether only the first or all grouped items are returned is determined as described above.

### 9.824.1.3 selectedUrls()

```
QList< QUrl > Digikam::ItemIconView::selectedUrls (
    bool grouping = false ) const
```

By default only the first images in groups are given, while all can be obtained by setting the grouping parameter to true. Given an operation, it will be determined from settings/user query whether only the first or all items in a group are returned. Ideally only the latter (giving an operation) is used.

### 9.824.1.4 slotFitToWindow

```
void Digikam::ItemIconView::slotFitToWindow ( ) [slot]
```

### 9.824.1.5 slotImageQualitySorter

```
void Digikam::ItemIconView::slotImageQualitySorter ( ) [slot]
```

Tools methods (Editor, BQM, Light Table) - itemiconview\_tools.cpp.

### 9.824.1.6 slotRemoveTag

```
void Digikam::ItemIconView::slotRemoveTag (
    int tagID ) [slot]
```

Implementation for Automatic Icon Removal of Confirmed Tags. QTimer to ensure TagRemoval is complete.

If the face just removed was the final face associated with that Tag, reset Tag Icon.

## 9.825 Digikam::ItemInfo Class Reference

The [ItemInfo](#) class contains provides access to the database for a single image.

### Public Types

- typedef [DatabaseFields::Hash](#)< QVariant > **DatabaseFieldsHashRaw**

### Public Member Functions

- **ItemInfo** ()  
*Constructor Creates a null image info.*
- **ItemInfo** (const [ItemInfo](#) &info)  
*Copy constructor.*
- **ItemInfo** (const [ItemListerRecord](#) &record)  
*Constructor.*
- **ItemInfo** (qulonglong ID)  
*Constructor.*
- **~ItemInfo** ()  
*Destructor.*
- **ItemInfo copyItem** (int dstAlbumID, const QString &dstFileName)  
*Copy database information of this item to a newly created item.*
- bool **isLocationAvailable** () const  
*Returns true if this is a valid [ItemInfo](#), and the location of the image is currently available (information freshly obtained from [CollectionManager](#))*
- bool **operator!=** (const [ItemInfo](#) &info) const
- bool **operator<** (const [ItemInfo](#) &info) const
- [ItemInfo](#) & **operator=** (const [ItemInfo](#) &info)
- bool **operator==** (const [ItemInfo](#) &info) const

### Operations with Properties

- bool **isNull** () const

- Returns if this objects contains valid data.*
- QString **name** () const
- QDateTime **dateTime** () const
- QDateTime **modDateTime** () const
- qulonglong **fileSize** () const
- QSize **dimensions** () const
- QUrl **fileUrl** () const
- Returns the `file://` url.*
- QString **filePath** () const
- Returns the file path to the image.*
- QString **relativePath** () const
- Returns the relative path part to the image.*
- qulonglong **id** () const
- int **albumId** () const
- int **albumRootId** () const
- The album root id.*
- double **aspectRatio** () const
- qulonglong **manualOrder** () const
- Returns the manual sort order.*
- DatabaseItem::Category **category** () const
- Returns the category of the item: Image, Audio, Video.*
- QString **format** () const
- Returns the image format / mimetype as a standardized string (see project/documents/DBSCHEMA.ODS).*
- bool **isVisible** () const
- Returns true if the image is marked as visible in the database.*
- bool **isRemoved** () const
- Returns true if the corresponding file was not deleted.*
- int **orientation** () const
- Returns the orientation of the image, ([MetaEngine::ImageOrientation](#), EXIF standard)*
- QString **title** () const
- QString **comment** () const
- int **faceCount** () const
- int **unconfirmedFaceCount** () const
- QMap< QString, QString > **getSuggestedNames** () const
- void **setName** (const QString &newName)
- Set the name (write it to database)*
- void **setDateTime** (const QDateTime &dateTime)
- Set the date and time (write it to database)*
- void **setModDateTime** (const QDateTime &dateTime)
- Set the modification date and time (write it to database)*
- void **setManualOrder** (qulonglong value)
- Set the manual sorting order for the item.*
- void **setOrientation** (int value)
- Set the orientation for the item.*
- void **setVisible** (bool isVisible)
- Set the visibility flag - triggers between Visible and Hidden.*
- DatabaseFieldsHashRaw **getDatabaseFieldsRaw** (const DatabaseFields::Set &requestedSet) const
- QVariant **getDatabaseFieldRaw** (const DatabaseFields::Set &requestedField) const

### Operations with Geolocation

- [ItemPosition](#) **imagePosition** () const
- Retrieve the [ItemPosition](#) object for this item.*
- double **longitudeNumber** () const
- Retrieves the coordinates and the altitude.*
- double **latitudeNumber** () const
- double **altitudeNumber** () const
- bool **hasCoordinates** () const
- bool **hasAltitude** () const

### Operations with History

- [DImageHistory](#) `imageHistory ()` const  
*Retrieves and sets the image history from the database.*
- void `setItemHistory (const DImageHistory &history)`
- bool `hasImageHistory ()` const
- QString `uuid ()` const  
*Retrieves and sets this' images UUID.*
- void `setUuid (const QString &uuid)`
- [HistoryImageId](#) `historyImageId ()` const  
*Constructs a [HistoryImageId](#) with all available information for this image.*
- bool `hasDerivedImages ()` const  
*Retrieve information about images from which this image is derived (ancestorImages) and images that have been derived from this images (derivedImages).*
- bool `hasAncestorImages ()` const
- QList< [ItemInfo](#) > `derivedImages ()` const
- QList< [ItemInfo](#) > `ancestorImages ()` const
- QList< QPair< qlonglong, qlonglong > > `relationCloud ()` const  
*Returns the cloud of all directly or indirectly related images, derived images or ancestors, in from of "a derived from b" pairs.*
- void `markDerivedFrom (const ItemInfo &ancestorImage)`  
*Add a relation to the database: This image is derived from the ancestorImage.*

### Operations with Groups

- bool `isGrouped ()` const  
*The image is grouped in the group of another (leading) image.*
- bool `hasGroupedImages ()` const  
*The image is the leading image of a group, there are other images grouped behind this one.*
- int `numberOfGroupedImages ()` const
- [ItemInfo](#) `groupImage ()` const  
*Returns the leading image of the group.*
- qlonglong `groupImageId ()` const
- QList< [ItemInfo](#) > `groupedImages ()` const  
*Returns the list of images grouped behind this image (not including this image itself) and an empty list if there is none.*
- void `addToGroup (const ItemInfo &info)`  
*Group this image behind the given image.*
- void `removeFromGroup ()`  
*This image is grouped behind another image: Remove this image from its group.*
- void `clearGroup ()`  
*This image [hasGroupedImages\(\)](#): Split up the group, remove all [groupedImages\(\)](#) from this image's group.*

### Operations with Containers

- [ImageCommonContainer](#) `imageCommonContainer ()` const  
*Retrieve information about the image, in form of numbers and user presentable strings, for certain defined fields of information (see [databaseinfocontainers.h](#))*
- [ImageMetadataContainer](#) `imageMetadataContainer ()` const
- [VideoMetadataContainer](#) `videoMetadataContainer ()` const
- [PhotoInfoContainer](#) `photoInfoContainer ()` const
- [VideoInfoContainer](#) `videoInfoContainer ()` const
- [Template](#) `metadataTemplate ()` const  
*Retrieve metadata template information about the image.*
- void `setMetadataTemplate (const Template &t)`  
*Set metadata template information (write it to database)*
- void `removeMetadataTemplate ()`  
*Remove all template info about the image from database.*
- [ItemComments](#) `imageComments (const CoreDbAccess &access)` const

- Retrieve the *ItemComments* object for this item.
- **ItemCopyright** *imageCopyright* () const  
Retrieve the *ItemCopyright* object for this item.
- **ItemExtendedProperties** *imageExtendedProperties* () const  
Retrieve the *ItemExtendedProperties* object for this item.

### Operations with Labels

- int **pickLabel** () const  
Returns the Pick Label Id (see PickLabel values in globals.h)
- int **colorLabel** () const  
Returns the Color Label Id (see ColorLabel values in globals.h)
- int **rating** () const  
Returns the rating.
- void **setPickLabel** (int value)  
Set the pick Label Id for the item (see PickLabel values from globals.h)
- void **setColorLabel** (int value)  
Set the color Label Id for the item (see ColorLabel values from globals.h)
- void **setRating** (int value)  
Set the rating for the item.

### Static Public Member Functions

- static **ItemInfo** **fromLocalFile** (const QString &path)  
Creates an *ItemInfo* object from a file url.
- static **ItemInfo** **fromLocationAlbumAndName** (int locationId, const QString &album, const QString &name)  
Create an *ItemInfo* object from the given combination, which must be cleaned and corresponding to the values in the database.
- static **ItemInfo** **fromUrl** (const QUrl &url)

### Operations with Similarity

- class **ItemInfoCache**
- class **ItemInfoList**
- double **similarityTo** (const qlonglong imageId) const
- double **currentSimilarity** () const
- qlonglong **currentReferenceImage** () const  
Returns the id of the current fuzzy search reference image.
- size\_t **hash** () const  
Return a signature for the item.
- QList< **ItemInfo** > **fromUniqueHash** (const QString &uniqueHash, qlonglong fileSize)  
Scans the database for items with the given signature.
- QString **uniqueHash** () const

### Operations with Tags

- void **setTag** (int tagId)  
Adds a tag to the item (writes it to database)
- void **addTagPaths** (const QStringList &tagPaths)  
Adds tags in the list to the item.
- void **removeTag** (int tagId)  
Remove a tag from the item (removes it from database)
- void **removeAllTags** ()  
Remove all tags from the item (removes it from database)
- **ItemTagPair** **imageTagPair** (int tagId) const  
Retrieve an *ItemTagPair* object for a single tag, or for all image/tag pairs for which properties are available (not necessarily the assigned tags)
- QList< **ItemTagPair** > **availableItemTagPairs** () const
- QList< int > **tagIds** () const

## Operations with Thumbnails

- [ThumbnailIdentifier](#) `thumbnailIdentifier ()` const  
*Fills a [ThumbnailIdentifier](#) / [ThumbnailInfo](#) from this [ItemInfo](#).*
- [ThumbnailInfo](#) `thumbnailInfo ()` const
- static [ThumbnailIdentifier](#) `thumbnailIdentifier (qulonglong id)`

### 9.825.1 Detailed Description

The properties can be read and written. Information will be cached.

#### Note

access rules for all methods in this class: [ItemInfoData](#) members shall be accessed only under [CoreDbAccess](#) lock. The id and albumId are the exception to this rule, as they are primitive and will never change during the lifetime of an object.

### 9.825.2 Constructor & Destructor Documentation

#### 9.825.2.1 ItemInfo() [1/2]

```
Digikam::ItemInfo::ItemInfo (
    qulonglong ID ) [explicit]
```

Creates an [ItemInfo](#) object without any cached data initially.

#### Parameters

<i>ID</i>	the unique ID for this image
-----------	------------------------------

#### 9.825.2.2 ItemInfo() [2/2]

```
Digikam::ItemInfo::ItemInfo (
    const ItemLISTERRecord & record ) [explicit]
```

Creates an [ItemInfo](#) object where the provided information will initially be available cached, without database access.

### 9.825.3 Member Function Documentation

#### 9.825.3.1 addTagPaths()

```
void Digikam::ItemInfo::addTagPaths (
    const QStringList & tagPaths )
```

Tags are created if they do not yet exist

### 9.825.3.2 albumId()

```
int Digikam::ItemInfo::albumId ( ) const
```

#### Returns

the id of the [PAlbum](#) to which this item belongs

### 9.825.3.3 aspectRatio()

```
double Digikam::ItemInfo::aspectRatio ( ) const
```

#### Returns

the id of the Aspect Ratio for this item

### 9.825.3.4 comment()

```
QString Digikam::ItemInfo::comment ( ) const
```

#### Returns

the default comment for this item

### 9.825.3.5 copyItem()

```
ItemInfo Digikam::ItemInfo::copyItem (
    int dstAlbumID,
    const QString & dstFileName )
```

#### Parameters

<i>dstAlbumID</i>	destination album id
<i>dstFileName</i>	new filename

#### Returns

an [ItemInfo](#) object of the new item

### 9.825.3.6 dateTime()

```
QDateTime Digikam::ItemInfo::dateTime ( ) const
```

#### Returns

the datetime of the image

### 9.825.3.7 dimensions()

```
QSize Digikam::ItemInfo::dimensions ( ) const
```

#### Returns

the dimensions of the image (valid only if dimensions have been requested)

### 9.825.3.8 faceCount()

```
int Digikam::ItemInfo::faceCount ( ) const
```

#### Returns

the number of Faces in this item.

### 9.825.3.9 fileSize()

```
qulonglong Digikam::ItemInfo::fileSize ( ) const
```

#### Returns

the filesize of the image

### 9.825.3.10 fileUrl()

```
QUrl Digikam::ItemInfo::fileUrl ( ) const
```

This is equivalent to `QUrl::fromLocalFile(filePath())`

### 9.825.3.11 getDatabaseFieldsRaw()

```
ItemInfo::DatabaseFieldsHashRaw Digikam::ItemInfo::getDatabaseFieldsRaw (
    const DatabaseFields::Set & requestedSet ) const
```

### 9.825.3.12 getSuggestedNames()

```
QMap< QString, QString > Digikam::ItemInfo::getSuggestedNames ( ) const
```

#### Returns

the map of Tag Region (in XML form) to Suggested Names for all Faces in the Image. Used to categorize images based on Face Suggestions.

### 9.825.3.13 groupImage()

```
ItemInfo Digikam::ItemInfo::groupImage ( ) const
```

Returns a null image if this image is not grouped ([isGrouped\(\)](#))

### 9.825.3.14 id()

```
qlonglong Digikam::ItemInfo::id ( ) const
```

#### Returns

the unique image id for this item

### 9.825.3.15 imageComments()

```
ItemComments Digikam::ItemInfo::imageComments (
    const CoreDbAccess & access ) const
```

This object allows full read and write access to all comments and their properties. You need to hold [CoreDbAccess](#) to ensure the validity. For simple, cached read access see [comment\(\)](#).

### 9.825.3.16 imageCopyright()

```
ItemCopyright Digikam::ItemInfo::imageCopyright ( ) const
```

This object allows full read and write access to all copyright values.

### 9.825.3.17 imageExtendedProperties()

```
ItemExtendedProperties Digikam::ItemInfo::imageExtendedProperties ( ) const
```

This object allows full read and write access to all extended properties values.

### 9.825.3.18 imageHistory()

```
DImageHistory Digikam::ItemInfo::imageHistory ( ) const
```

Note: The image history retrieved here does typically include all steps from the original to this image, but does not reference this image itself.

### 9.825.3.19 longitudeNumber()

```
double Digikam::ItemInfo::longitudeNumber ( ) const
```

Returns 0 if [hasCoordinates\(\)](#), or [hasAltitude](#) resp, is false.

### 9.825.3.20 modDateTime()

```
QDateTime Digikam::ItemInfo::modDateTime ( ) const
```

#### Returns

the modification datetime of the image

### 9.825.3.21 name()

```
QString Digikam::ItemInfo::name ( ) const
```

#### Returns

the name of the image

### 9.825.3.22 removeTag()

```
void Digikam::ItemInfo::removeTag (
    int tagID )
```

#### Parameters

<i>tagID</i>	the ID of the tag to remove
--------------	-----------------------------

### 9.825.3.23 setDateTime()

```
void Digikam::ItemInfo::setDateTime (
    const QDateTime & dateTime )
```

#### Parameters

<i>dateTime</i>	the new date and time.
-----------------	------------------------

### 9.825.3.24 setMetadataTemplate()

```
void Digikam::ItemInfo::setMetadataTemplate (
    const Template & t )
```

#### Parameters

<i>t</i>	the new template data.
----------	------------------------

### 9.825.3.25 setModDateTime()

```
void Digikam::ItemInfo::setModDateTime (
    const QDateTime & dateTime )
```

#### Parameters

<i>dateTime</i>	the new modification date and time.
-----------------	-------------------------------------

### 9.825.3.26 setName()

```
void Digikam::ItemInfo::setName (
    const QString & newName )
```

#### Parameters

<i>newName</i>	the new name.
----------------	---------------

### 9.825.3.27 setTag()

```
void Digikam::ItemInfo::setTag (
    int tagID )
```

#### Parameters

<i>tagID</i>	the ID of the tag to add
--------------	--------------------------

### 9.825.3.28 tagIds()

```
QList< int > Digikam::ItemInfo::tagIds ( ) const
```

#### Returns

a list of IDs of tags assigned to this item

#### See also

[tagNames](#)

[tagPaths](#)

[Album::id\(\)](#)

### 9.825.3.29 title()

```
QString Digikam::ItemInfo::title ( ) const
```

#### Returns

the default title for this item

**9.825.3.30 unconfirmedFaceCount()**

```
int Digikam::ItemInfo::unconfirmedFaceCount ( ) const
```

**Returns**

the number of Unconfirmed Faces in this item.

**9.825.3.31 uniqueHash()**

```
QString Digikam::ItemInfo::uniqueHash ( ) const
```

**Returns**

the unique hash signature as string of the image.

**9.826 Digikam::ItemInfoAlbumsJob Class Reference**

Inheritance diagram for Digikam::ItemInfoAlbumsJob:

**Signals**

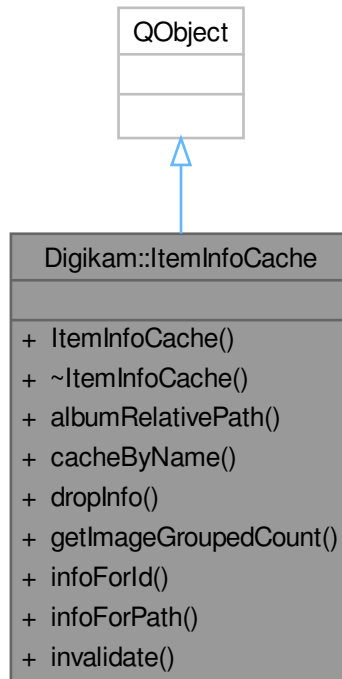

- void **signalCompleted** (const [ItemInfoList](#) &items)

**Public Member Functions**

- **ItemInfoAlbumsJob** (QObject \*const parent=nullptr)
- void **allItemsFromAlbums** (const AlbumList &albumsList)
- void **stop** ()

## 9.827 Digikam::ItemInfoCache Class Reference

Inheritance diagram for Digikam::ItemInfoCache:

### Public Member Functions

- `QString` **albumRelativePath** (int albumId)  
*Returns the cached relativePath for the given album id.*
- void **cacheByName** (const QExplicitlySharedDataPointer< [ItemInfoData](#) > &infoPtr)  
*Call this to put data in the hash by file name if you have newly created data and the name is filled.*
- void **dropInfo** (const QExplicitlySharedDataPointer< [ItemInfoData](#) > &infoPtr)  
*Call this when the data has been dereferenced, before deletion.*
- int **getImageGroupedCount** (qlonglong id)  
*Returns the cached grouped count for the given image id.*
- QExplicitlySharedDataPointer< [ItemInfoData](#) > **infoForId** (qlonglong id)  
*Return an [ItemInfoData](#) object for the given image id.*
- QExplicitlySharedDataPointer< [ItemInfoData](#) > **infoForPath** (int albumRootId, const QString &relativePath, const QString &name)  
*Return an [ItemInfoData](#) object for the given album root, relativePath and file name triple.*
- void **invalidate** ()  
*Invalidate the cache and all its cached data.*

## 9.827.1 Member Function Documentation

### 9.827.1.1 cacheByName()

```
void Digikam::ItemInfoCache::cacheByName (
    const QExplicitlySharedDataPointer< ItemInfoData > & infoPtr )
```

Call under write lock.

### 9.827.1.2 infoForId()

```
QExplicitlySharedDataPointer< ItemInfoData > Digikam::ItemInfoCache::infoForId (
    qlonglong id )
```

A new object is created, or an existing object is returned. If a new object is created, the id field will be initialized.

### 9.827.1.3 infoForPath()

```
QExplicitlySharedDataPointer< ItemInfoData > Digikam::ItemInfoCache::infoForPath (
    int albumRootId,
    const QString & relativePath,
    const QString & name )
```

Works if previously cached with cacheByName. Returns 0 if not found.

## 9.828 Digikam::ItemInfoData Class Reference

## 9.837 Digikam::ItemLISTER Class Reference

### Public Member Functions

- void **list** (`ItemLISTERReceiver *const receiver`, `const CoreDbUrl &url`)  
*Convenience method for Album, Tag and Date URLs, not for Search URLs.*
- void **listDateRange** (`ItemLISTERReceiver *const receiver`, `const QDate &startDate`, `const QDate &endDate`)  
*List those images whose date lies in the range beginning with startDate (inclusive) and ending before endDate (exclusive).*
- void **setListOnlyAvailable** (`bool listOnlyAvailable`)

Adjust the setting if images from collections that are currently not in the state "available" will be included in the listing.

- void `setRecursive` (bool recursive)

Adjust the setting if album or tags will be listed recursively (i.e.

### Operations with TAlbum

- void `listTag` (`ItemListerReceiver` \*const receiver, const QList< int > &tagIds)  
List the images which have assigned the tags specified by tagIds Updated to support multiple tags.
- void `listImageTagPropertySearch` (`ItemListerReceiver` \*const receiver, const QString &xml)  
Execute the search specified by search XML describing a Tag Properties search.
- QString `tagSearchXml` (int tagId, const QString &type, bool includeChildTags) const

### Operations with SAlbum

- void `listSearch` (`ItemListerReceiver` \*const receiver, const QString &xml, int limit=0, qlonglong reference←  
ImageId=-1)  
Execute the search specified by search XML.
- void `listHaarSearch` (`ItemListerReceiver` \*const receiver, const QString &xml)  
Execute the search specified by search XML describing a Haar search.
- void `listAreaRange` (`ItemListerReceiver` \*const receiver, double lat1, double lat2, double lon1, double lon2)  
List the images whose coordinates are between coordinates contained in areaCoordinates(lat1, lat2, lng1, lng2).

### Operations with PAlbum

- void `listPAlbum` (`ItemListerReceiver` \*const receiver, int albumRootId, const QString &album)  
List images in the *Album* (physical album) specified by albumRoot, album.

## 9.837.1 Member Function Documentation

### 9.837.1.1 listHaarSearch()

```
void Digikam::ItemLister::listHaarSearch (
    ItemListerReceiver *const receiver,
    const QString & xml )
```

#### Parameters

<i>receiver</i>	the receiver for the searches
<i>xml</i>	SearchXml describing the query

### 9.837.1.2 listImageTagPropertySearch()

```
void Digikam::ItemLister::listImageTagPropertySearch (
    ItemListerReceiver *const receiver,
    const QString & xml )
```

Two special add-ons: Non-unique by image id; if enabled, uses the extended ImageRecord protocol to pass the property value in the record's extraValue.

## Parameters

<i>receiver</i>	the receiver for the searches
<i>xml</i>	SearchXml describing the query

**9.837.1.3 listPAlbum()**

```
void Digikam::ItemLister::listPAlbum (
    ItemListerReceiver *const receiver,
    int albumRootId,
    const QString & album )
```

The results will be fed to the specified receiver.

**9.837.1.4 listSearch()**

```
void Digikam::ItemLister::listSearch (
    ItemListerReceiver *const receiver,
    const QString & xml,
    int limit = 0,
    qlonglong referenceImageId = -1 )
```

## Parameters

<i>receiver</i>	the receiver for the searches
<i>xml</i>	SearchXml describing the query
<i>limit</i>	the limit the count of the result set. If limit = 0, then no limit is set.
<i>referenceImageId</i>	the id of a reference image in the search query.

**9.837.1.5 setListOnlyAvailable()**

```
void Digikam::ItemLister::setListOnlyAvailable (
    bool listOnlyAvailable )
```

Default: true.

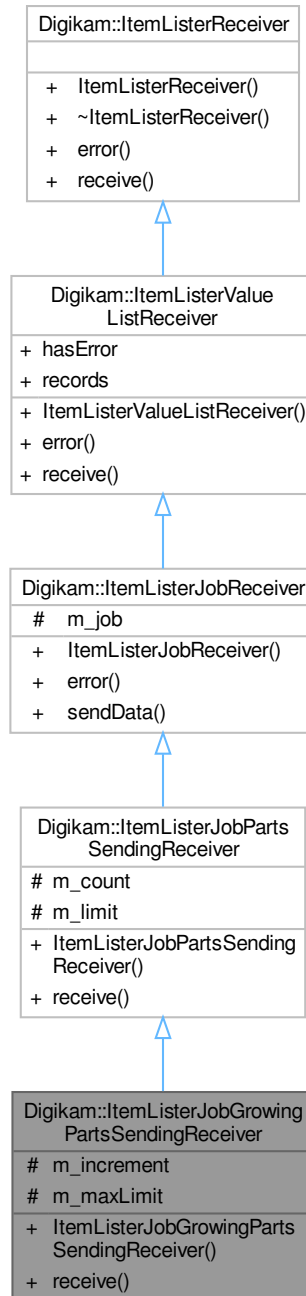

**9.837.1.6 setRecursive()**

```
void Digikam::ItemLister::setRecursive (
    bool recursive )
```

including subalbums / subtags)

## 9.838 Digikam::ItemListerJobGrowingPartsSendingReceiver Class Reference

Inheritance diagram for Digikam::ItemListerJobGrowingPartsSendingReceiver:

## 9.845.1 Member Function Documentation

### 9.845.1.1 bestRepresentativeIndexFromList()

```
QVariant Digikam::ItemMarkerTiler::bestRepresentativeIndexFromList (
    const QList< QVariant > & indices,
    const int sortKey ) [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

### 9.845.1.2 getGlobalGroupState()

```
GeoGroupState Digikam::ItemMarkerTiler::getGlobalGroupState ( ) [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

### 9.845.1.3 getTile()

```
AbstractMarkerTiler::Tile * Digikam::ItemMarkerTiler::getTile (
    const TileIndex & tileIndex,
    const bool stopIfEmpty ) [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

### 9.845.1.4 getTileGroupState()

```
GeoGroupState Digikam::ItemMarkerTiler::getTileGroupState (
    const TileIndex & tileIndex ) [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

### 9.845.1.5 getTileMarkerCount()

```
int Digikam::ItemMarkerTiler::getTileMarkerCount (
    const TileIndex & tileIndex ) [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

### 9.845.1.6 getTileRepresentativeMarker()

```
QVariant Digikam::ItemMarkerTiler::getTileRepresentativeMarker (
    const TileIndex & tileIndex,
    const int sortKey ) [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

### 9.845.1.7 `getTileSelectedCount()`

```
int Digikam::ItemMarkerTiler::getTileSelectedCount (
    const TileIndex & tileIndex ) [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

### 9.845.1.8 `indicesEqual()`

```
bool Digikam::ItemMarkerTiler::indicesEqual (
    const QVariant & a,
    const QVariant & b ) const [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

### 9.845.1.9 `onIndicesClicked()`

```
void Digikam::ItemMarkerTiler::onIndicesClicked (
    const ClickInfo & clickInfo ) [override], [virtual]
```

Reimplemented from [Digikam::AbstractMarkerTiler](#).

### 9.845.1.10 `onIndicesMoved()`

```
void Digikam::ItemMarkerTiler::onIndicesMoved (
    const TileIndex::List & tileIndicesList,
    const GeoCoordinates & targetCoordinates,
    const QPersistentModelIndex & targetSnapIndex ) [override], [virtual]
```

Reimplemented from [Digikam::AbstractMarkerTiler](#).

### 9.845.1.11 `pixmapFromRepresentativeIndex()`

```
QPixmap Digikam::ItemMarkerTiler::pixmapFromRepresentativeIndex (
    const QVariant & index,
    const QSize & size ) [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

### 9.845.1.12 `prepareTiles()`

```
void Digikam::ItemMarkerTiler::prepareTiles (
    const GeoCoordinates & upperLeft,
    const GeoCoordinates & lowerRight,
    int level ) [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

**9.845.1.13 regenerateTiles()**

```
void Digikam::ItemMarkerTiler::regenerateTiles ( ) [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

**9.845.1.14 removeMarkerIndexFromGrid()**

```
void Digikam::ItemMarkerTiler::removeMarkerIndexFromGrid (
    const QModelIndex & markerIndex,
    const bool ignoreSelection = false )
```

## Parameters

<i>markerIndex</i>	The marker index to remove
<i>ignoreSelection</i>	Do not remove the marker from the count of selected items. This is only used by slotSourceModelRowsAboutToBeRemoved internally, because the selection model sends us an extra signal about the deselection.

**9.845.1.15 setActive()**

```
void Digikam::ItemMarkerTiler::setActive (
    const bool state ) [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

**9.845.1.16 tileNew()**

```
AbstractMarkerTiler::Tile * Digikam::ItemMarkerTiler::tileNew ( ) [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

**9.845.1.17 tilerFlags()**

```
AbstractMarkerTiler::TilerFlags Digikam::ItemMarkerTiler::tilerFlags ( ) const [override],
[virtual]
```

Reimplemented from [Digikam::AbstractMarkerTiler](#).

**9.846 Digikam::ItemMetadataAdjustmentHint Class Reference****Public Types**

- enum [AdjustmentStatus](#) { [AboutToEditMetadata](#) , [MetadataEditingFinished](#) , [MetadataEditingAborted](#) }

*The file's has been edited writing out information from the database, i.e., the db is already guaranteed to contain all changed information in the file's metadata.*

**Public Member Functions**

- ItemMetadataAdjustmentHint** (qulonglong id, [AdjustmentStatus](#) status, const QDateTime &modificationDateOnDisk, qulonglong fileSize)

- `QDateTime m_modificationDate`
- `AdjustmentStatus m_status = AboutToEditMetadata`

## 9.846.1 Member Enumeration Documentation

### 9.846.1.1 AdjustmentStatus

enum `Digikam::ItemMetadataAdjustmentHint::AdjustmentStatus`

There is no need for a full rescan, optimizations are possible.

#### Enumerator

<code>AboutToEditMetadata</code>	The file is about to be edited. Suspends scanning. The Finished hint must follow.
<code>MetadataEditingFinished</code>	The file's metadata has been edited as described above.
<code>MetadataEditingAborted</code>	The file's metadata has not been edited, despite sending <code>AboutToEditMetadata</code> .

### Protected Attributes inherited from [Digikam::DragDropModelImplementation](#)

- [AbstractItemDragDropHandler](#) \* **m\_dragDropHandler** = nullptr

## 9.847.1 Member Enumeration Documentation

### 9.847.1.1 ItemModelRoles

enum [Digikam::ItemModel::ItemModelRoles](#)

#### Enumerator

ItemModelPointerRole	An ItemModel* pointer to this model.
ThumbnailRole	Returns a thumbnail pixmap. May be implemented by subclasses. Returns either a valid pixmap or a null QVariant.
CreationDateRole	Returns a QDateTime with the creation date.
ExtraDataRole	Return (optional) extraData field.
ExtraDataDuplicateCount	Returns the number of duplicate indexes for the same image id.
LLeftPanelRole	Roles which are defined here but not implemented by <a href="#">ItemModel</a> Returns position of item in Left Light Table preview.
LRightPanelRole	Returns position of item in Right Light Table preview.
SubclassRoles	For use by subclasses.
FilterModelRoles	For use by filter models.

## 9.847.2 Member Function Documentation

### 9.847.2.1 addItemInfo()

```
void Digikam::ItemModel::addItemInfo (
    const ItemInfo & info )
```

If you list entries not unique per image id, you must add an extraValue so that every entry is unique by imageId and extraValues. Please note that these methods do not prevent addition of duplicate entries.

### 9.847.2.2 addItemInfoSynchronously()

```
void Digikam::ItemModel::addItemInfoSynchronously (
    const ItemInfo & info )
```

This method first adds the info, synchronously. Only afterwards, the preprocessor will have the opportunity to process it. This method also bypasses any incremental updates. Please note that these methods do not prevent addition of duplicate entries.

### 9.847.2.3 allRefreshingFinished

```
void Digikam::ItemModel::allRefreshingFinished ( ) [signal]
```

The model is in polished, clean situation right now.

### 9.847.2.4 ensureHasItemInfo()

```
void Digikam::ItemModel::ensureHasItemInfo (
    const ItemInfo & info )
```

Method returns immediately, the addition may happen later asynchronously. These methods prevent the addition of duplicate entries.

### 9.847.2.5 imageInfo() [1/2]

```
ItemInfo Digikam::ItemModel::imageInfo (
    const QModelIndex & index ) const
```

If the index is not valid, imageInfo will return a null [ItemInfo](#), imageId will return 0, imageInfoRef must not be called with an invalid index.

### 9.847.2.6 imageInfo() [2/2]

```
ItemInfo Digikam::ItemModel::imageInfo (
    int row ) const
```

Note that imageInfoRef will crash if index is invalid.

### 9.847.2.7 imageInfosAboutToBeAdded

```
void Digikam::ItemModel::imageInfosAboutToBeAdded (
    const QList< ItemInfo > & infos ) [signal]
```

This signal is sent before the model data is changed and views are informed.

### 9.847.2.8 imageInfosAboutToBeRemoved

```
void Digikam::ItemModel::imageInfosAboutToBeRemoved (
    const QList< ItemInfo > & infos ) [signal]
```

This signal is sent before the model data is changed and views are informed. Note: You need to explicitly enable sending of this signal. It is not sent in [clearItemInfos\(\)](#).

### 9.847.2.9 imageInfosAdded

```
void Digikam::ItemModel::imageInfosAdded (
    const QList< ItemInfo > & infos ) [signal]
```

This signal is sent after the model data is changed and views are informed.

### 9.847.2.10 imageInfosCleared()

```
virtual void Digikam::ItemModel::imageInfosCleared ( ) [inline], [protected], [virtual]
```

Reimplemented in [Digikam::ItemThumbnailModel](#).

### 9.847.2.11 imageInfosRemoved

```
void Digikam::ItemModel::imageInfosRemoved (
    const QList< ItemInfo > & infos ) [signal]
```

This signal is sent after the model data is changed and views are informed. \* Note: You need to explicitly enable sending of this signal. It is not sent in [clearItemInfos\(\)](#).

### 9.847.2.12 indexForPath()

```
QModelIndex Digikam::ItemModel::indexForPath (
    const QString & filePath ) const
```

This is fast if `keepsFilePathCache` is enabled. The file path is as returned by [ItemInfo.filePath\(\)](#). In case of multiple occurrences of the same file, the simpler variants return any one found first, use the `QList` methods to retrieve all occurrences.

### 9.847.2.13 isRefreshing()

```
bool Digikam::ItemModel::isRefreshing ( ) const
```

For a preprocessor this means that, although the preprocessor may currently have processed all it got, more batches are to be expected.

### 9.847.2.14 readyForIncrementalRefresh

```
void Digikam::ItemModel::readyForIncrementalRefresh ( ) [signal]
```

This is guaranteed only for the scope of emitting this signal.

### 9.847.2.15 requestIncrementalRefresh()

```
void Digikam::ItemModel::requestIncrementalRefresh ( ) [protected]
```

The signal will be emitted inline if the model is ready right now.

### 9.847.2.16 retrieveItemInfo()

```
ItemInfo Digikam::ItemModel::retrieveItemInfo (
    const QModelIndex & index ) [static]
```

The index may be from a QSortFilterProxyModel as long as an [ItemModel](#) is at the end.

### 9.847.2.17 setKeepsFilePathCache()

```
void Digikam::ItemModel::setKeepsFilePathCache (
    bool keepCache )
```

Default is false.

### 9.847.2.18 setPreprocessor()

```
void Digikam::ItemModel::setPreprocessor (
    QObject *const processor )
```

For every QList of ItemInfos added to `addItemInfo`, the signal `preprocess()` will be emitted. The preprocessor may process the items and shall then readd them by calling `reAddItemInfos()`. It may take some time to process. It shall discard any held infos when the `modelReset()` signal is sent. It shall call `readdFinished()` when no reset occurred and all infos on the way have been readded. This means that only after calling this method, you shall make three connections (`preprocess` -> your slot, your signal -> `reAddItemInfos`, your signal -> `reAddingFinished`) and make or already hold a connection `modelReset()` -> your slot. There is only one preprocessor at a time, a previously set object will be disconnected.

**9.847.2.19 setSendRemovalSignals()**

```
void Digikam::ItemModel::setSendRemovalSignals (
    bool send )
```

Default: false

**9.847.2.20 setWatchFlags()**

```
void Digikam::ItemModel::setWatchFlags (
    const DatabaseFields::Set & set )
```

If either of these is changed, `dataChanged()` will be emitted. Default is no flag (no signal will be emitted).

**9.847.2.21 startIncrementalRefresh()**

```
void Digikam::ItemModel::startIncrementalRefresh ( ) [protected]
```

You shall only call this method from a slot connected to [readyForIncrementalRefresh\(\)](#). To initiate an incremental refresh, call [requestIncrementalRefresh\(\)](#).

**9.847.2.22 startRefresh()**

```
void Digikam::ItemModel::startRefresh ( ) [protected]
```

No incremental refreshes will be started while listing. A [clearItemInfos\(\)](#) always stops listing, calling `finishRefresh()` is then not necessary.

**9.848 Digikam::ItemPosition Class Reference****Public Member Functions**

- **ItemPosition** ()  
*Creates a null [ItemPosition](#) object.*

## 9.848.1 Constructor & Destructor Documentation

### 9.848.1.1 ItemPosition()

```
Digikam::ItemPosition::ItemPosition (
    qulonglong imageId ) [explicit]
```

The information is read from the database.

## 9.848.2 Member Function Documentation

### 9.848.2.1 `apply()`

```
void Digikam::ItemPosition::apply ( )
```

(Also called from destructor)

### 9.848.2.2 `isEmpty()`

```
bool Digikam::ItemPosition::isEmpty ( ) const
```

An empty object is empty even if values have been set; it becomes not empty after calling [apply\(\)](#).

### 9.848.2.3 `latitude()`

```
QString Digikam::ItemPosition::latitude ( ) const
```

This provides lossless storage.

### 9.848.2.4 `latitudeNumber()`

```
double Digikam::ItemPosition::latitudeNumber ( ) const
```

North and East have a positive sign, South and West negative. This provides high precision, with the usual floating point concerns, and possible problems finding the exact text form when converting *back* to fractions.

### 9.848.2.5 `latitudeUserPresentableNumbers()`

```
bool Digikam::ItemPosition::latitudeUserPresentableNumbers (
    int * degrees,
    int * minutes,
    double * seconds,
    char * directionReference )
```

This means that degrees and minutes are integer, the seconds fractional. Direction reference is 'N'/'S', 'E'/'W' resp. This is for the purpose of presenting to the user, there are no guarantees on precision. Returns true if the values have been changed.

### 9.848.2.6 `remove()`

```
void Digikam::ItemPosition::remove ( )
```

This object and any [ItemPosition](#) object created later will be empty.

**9.848.2.7 setLatitude()** [1/2]

```
bool Digikam::ItemPosition::setLatitude (
    const QString & latitude )
```

Returns true if the format is accepted.

**9.848.2.8 setLatitude()** [2/2]

```
bool Digikam::ItemPosition::setLatitude (
    double latitudeNumber )
```

Returns true if the value is valid and accepted.

    - Write a string with aspect ratio information formatted.*
  - static QString **permissionsString** (const QFile::Info &fi)
    - Return file permissions string.*
  - static QString **humanReadableBytesCount** (qint64 bytes, bool si=false)
    - Return an human readable string of file size in 'bytes'.*

## Additional Inherited Members

### Signals inherited from [Digikam::DExpanderBox](#)

- void **signalItemButtonPressed** (int index)
- void **signalItemExpanded** (int index, bool b)
- void **signalItemToggled** (int index, bool b)

## 9.857.1 Member Function Documentation

### 9.857.1.1 `humanReadableBytesCount()`

```
QString Digikam::ItemPropertiesTab::humanReadableBytesCount (
    qint64 bytes,
    bool si = false ) [static]
```

If 'si' is true, a decade of bytes is interpreted on base of 1000 byte, else 1024.

### 9.857.1.2 `shortenedTagPaths()`

```
QStringList Digikam::ItemPropertiesTab::shortenedTagPaths (
    const QStringList & tagPaths,
    QList< QVariant > * identifiers = nullptr ) [static]
```

Shortens the tag paths by sorting and then cutting identical paths from the second and following paths (only the first item gives the full path). If you want to retain information about which tag path is sorted where, you can optionally give a QVariant list. This list shall contain an identifier for the tag path at the same index and will be resorted as the returned list.

## 9.858 Digikam::ItemPropertiesVersionsTab Class Reference

Inheritance diagram for Digikam::ItemPropertiesVersionsTab:

### Public Slots

- void **setEnabledHistorySteps** (int count)

### Signals

- void **actionTriggered** (const [ItemInfo](#) &info)
- void **imageSelected** (const [ItemInfo](#) &info)

### Public Member Functions

- QString **possibleDate** (const QString &str, bool &exact) const

### Protected Attributes

- bool **m\_imageTagPropertiesJoined** = false
- QString **m\_longMonths** [12]
- QString **m\_shortMonths** [12]

## 9.859.1 Member Function Documentation

### 9.859.1.1 setImageTagPropertiesJoined()

```
void Digikam::ItemQueryBuilder::setImageTagPropertiesJoined (
    bool isJoined )
```

(Default: false)

## 9.860 Digikam::ItemQueryPostHook Class Reference

### Public Member Functions

- **ItemQueryPostHook** ()=default  
*This is the single hook, ItemQueryPostHookS is the container.*
- virtual bool **checkPosition** (double, double)

## 9.861 Digikam::ItemQueryPostHooks Class Reference

### Public Member Functions

- void `addHook` (`ItemQueryPostHook *const hook`)  
*Called by `ItemQueryBuilder`.*
- bool `checkPosition` (double `latitudeNumber`, double `longitudeNumber`)  
*Call this method after passing the object to `buildQuery` and executing the statement.*

### Protected Attributes

- `QList< ItemQueryPostHook * > m_postHooks`

### 9.861.1 Member Function Documentation

#### 9.861.1.1 `addHook()`

```
void Digikam::ItemQueryPostHooks::addHook (  
    ItemQueryPostHook *const hook )
```

Ownership of the object is passed.

#### 9.861.1.2 `checkPosition()`

```
bool Digikam::ItemQueryPostHooks::checkPosition (  
    double latitudeNumber,  
    double longitudeNumber )
```

Returns true if the search is matched.

## 9.862 Digikam::ItemRatingOverlay Class Reference

## Protected Attributes inherited from [Digikam::ItemDelegateOverlay](#)

- `QAbstractItemDelegate * m_delegate` = nullptr
- `QAbstractItemView * m_view` = nullptr

## 9.862.1 Member Function Documentation

### 9.862.1.1 `createWidget()`

```
QWidget * Digikam::ItemRatingOverlay::createWidget ( ) [override], [protected], [virtual]
```

When creating the object, pass [parentWidget\(\)](#) as parent widget. Ownership of the object is passed. It will be deleted in [setActive\(false\)](#).

Implements [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.862.1.2 `hide()`

```
void Digikam::ItemRatingOverlay::hide ( ) [override], [protected], [virtual]
```

Default implementation [hide\(\)](#)s `m_widget`.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.862.1.3 `setActive()`

```
void Digikam::ItemRatingOverlay::setActive (
    bool active ) [override], [protected], [virtual]
```

If active is false, this will delete the widget and disconnect all signal from model and view to this object (!)

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.862.1.4 `slotEntered()`

```
void Digikam::ItemRatingOverlay::slotEntered (
    const QModelIndex & index ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

**9.862.1.5 visualChange()**

```
void Digikam::ItemRatingOverlay::visualChange ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemDelegateOverlay](#).

**9.862.1.6 widgetEnterEvent()**

```
void Digikam::ItemRatingOverlay::widgetEnterEvent ( ) [override], [protected], [virtual]
```

QEvent::Leave event for the widget is received. The default implementation does nothing.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

**9.862.1.7 widgetLeaveEvent()**

```
void Digikam::ItemRatingOverlay::widgetLeaveEvent ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

## 9.863.1 Member Function Documentation

### 9.863.1.1 `checkIndex()`

```
bool Digikam::ItemRotateOverlay::checkIndex (
    const QModelIndex & index ) const [override], [protected], [virtual]
```

The default implementation returns true.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.863.1.2 `createButton()`

```
ItemViewHoverButton * Digikam::ItemRotateOverlay::createButton ( ) [override], [protected],
[virtual]
```

Pass `view()` as parent.

Implements [Digikam::HoverButtonDelegateOverlay](#).

### 9.863.1.3 `setActive()`

```
void Digikam::ItemRotateOverlay::setActive (
    bool active ) [override], [virtual]
```

Reimplemented from [Digikam::HoverButtonDelegateOverlay](#).

### 9.863.1.4 `updateButton()`

```
void Digikam::ItemRotateOverlay::updateButton (
    const QModelIndex & index ) [override], [protected], [virtual]
```

Reposition your button here, adjust and store state.

Implements [Digikam::HoverButtonDelegateOverlay](#).

### 9.863.1.5 widgetEnterEvent()

```
void Digikam::ItemRotateOverlay::widgetEnterEvent ( ) [override], [protected], [virtual]
```

QEvent::Leave event for the widget is received. The default implementation does nothing.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.863.1.6 widgetLeaveEvent()

```
void Digikam::ItemRotateOverlay::widgetLeaveEvent ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

## 9.864 Digikam::ItemRotateOverlayButton Class Reference

Inheritance diagram for Digikam::ItemRotateOverlayButton:

### Public Member Functions

- **ItemRotateOverlayButton** (ItemRotateOverlayDirection dir, QAbstractItemView \*const parentView)
- QSize [sizeHint](#) () const override

*Reimplement to match the size of your icon.*

## Public Member Functions inherited from [Digikam::ItemViewHoverButton](#)

- **ItemViewHoverButton** (QAbstractItemView \*const parentView)
- QModelIndex **index** () const
- void **initIcon** ()
- void **reset** ()
- void **setIndex** (const QModelIndex &index)
- void **setVisible** (bool visible) override

## Protected Member Functions

- QIcon **icon** () override  
*Return your icon here.*
- void **updateToolTip** () override  
*Optionally update tooltip here.*

## Protected Member Functions inherited from [Digikam::ItemViewHoverButton](#)

- void **enterEvent** (QEnterEvent \*event)
- void **leaveEvent** (QEvent \*event)
- void **paintEvent** (QPaintEvent \*event)
- void **setup** ()  
*to call in children class constructors to init signal/slot connections.*

## Protected Attributes

- void **setFadingValue** (int value)
- void **startFading** ()
- void **stopFading** ()

## 9.864.1 Member Function Documentation

### 9.864.1.1 icon()

`QIcon Digikam::ItemRotateOverlayButton::icon ( ) [override], [protected], [virtual]`

Will be queried again on toggle.

Implements [Digikam::ItemViewHoverButton](#).

### 9.864.1.2 sizeHint()

`QSize Digikam::ItemRotateOverlayButton::sizeHint ( ) const [override], [virtual]`

Implements [Digikam::ItemViewHoverButton](#).

### 9.864.1.3 updateToolTip()

`void Digikam::ItemRotateOverlayButton::updateToolTip ( ) [override], [protected], [virtual]`

Will be called again on state change.

Reimplemented from [Digikam::ItemViewHoverButton](#).

## 9.865 Digikam::ItemScanInfo Class Reference

### Public Member Functions

- `bool isNull ( ) const`

### Public Attributes

- `int albumID = 0`
- `DatabaselItem::Category category = DatabaselItem::UndefinedCategory`
- `qulonglong fileSize = 0`
- `qulonglong id = 0`
- `QString itemName`
- `QDateTime modificationDate`
- `DatabaselItem::Status status = DatabaselItem::UndefinedStatus`
- `QString uniqueHash`

## 9.866 Digikam::ItemScanner Class Reference

### Public Types

- `enum ScanMode { NewScan , ModifiedScan , Rescan , CleanScan }`

## Public Member Functions

- [ItemScanner](#) (const QFileInfo &info)  
*Construct an [ItemScanner](#) from an existing QFileInfo object.*
- [ItemScanner](#) (const QFileInfo &info, const [ItemScanInfo](#) &Iteminfo)  
*Construct an [ItemScanner](#) object from an existing QFileInfo and [ItemScanInfo](#) object.*
- [ItemScanner](#) (qulonglong imageid)  
*Construct an [ItemScanner](#) for an image in the database.*
- const [ItemScanInfo](#) & [itemScanInfo](#) () const  
*Provides access to the information retrieved by scanning.*
- void [loadFromDisk](#) ()  
*Loads data from disk (metadata, image file properties).*
- void [setCategory](#) (DatabaseItem::Category category)  
*Inform the scanner about the category of the file.*

## Static Public Member Functions

- static QString [formatToString](#) (const QString &format)  
*Helper method to translate enum values to user presentable strings.*

## Operations on History Metadata

- bool [hasHistoryToResolve](#) () const  
*Returns true if this file has been marked as needing history resolution at a later stage.*
- void [scanBalooInfo](#) ()  
*scanBalooInfo - retrieve tags, comments and rating from Baloo Desktop service.*
- static bool [resolveImageHistory](#) (qulonglong id, QList< qulonglong > \*needTaggingIds=nullptr)  
*Resolves the image history of the image id by filling the ImageRelations table for all contained referred images.*
- static bool [resolveImageHistory](#) (qulonglong imageid, const QString &historyXml, QList< qulonglong > \*needTaggingIds=nullptr)
- static void [tagItemHistoryGraph](#) (qulonglong id)  
*Takes the history graph reachable from the given image, and assigns versioning tags to all entries based on history image types and graph structure.*
- static [DImageHistory](#) [resolvedImageHistory](#) (const [DImageHistory](#) &history, bool mustBeAvailable=false)  
*All referred images of the given history will be resolved.*
- static bool [sameReferredImage](#) (const [HistoryImageId](#) &id1, const [HistoryImageId](#) &id2)  
*Determines if the two ids refer to the same image.*
- static QList< qulonglong > [resolveHistoryImageId](#) (const [HistoryImageId](#) &historyId)  
*Returns all image ids fulfilling the given image id.*
- void [scanImageHistory](#) ()
- void [commitImageHistory](#) ()
- void [scanImageHistoryIfModified](#) ()
- QString [uniqueHash](#) () const

## Operations with Database

- void **newFile** (int albumId)
 

*Call this when you want [ItemScanner](#) to add a new file to the database and read all information into the database.*
- void **newFileFullScan** (int albumId)
 

*Call this when you want [ItemScanner](#) to add a new file to the database and read all information into the database.*
- void **rescan** ()
 

*Call this to take an existing image in the database, but re-read all information from the file into the database, possibly overwriting information there.*
- void **cleanScan** ()
 

*This is the same as [rescan\(\)](#) but the database metadata will be cleaned up if the corresponding metadata write option is enabled.*
- void **commit** ()
 

*Commits the scanned information to the database.*
- qlonglong **id** () const
 

*Returns the image id of the scanned file, if (yet) available.*
- void **copiedFrom** (int albumId, qlonglong srcId)
 

*Similar to [newFile](#).*
- static void **sortByProximity** (QList< [ItemInfo](#) > &infos, const [ItemInfo](#) &subject)
 

*Sort a list of infos by proximity to the given subject.*
- bool **copyFromSource** (qlonglong src)
- void **commitCopyImageAttributes** ()
- void **cleanDatabaseMetadata** ()
- void **prepareAddImage** (int albumId)
- bool **commitAddImage** ()

## Operations on File Metadata

- void **fileModified** ()
 

*Call this when you have detected that a file in the database has been modified on disk.*
- static void **fillCommonContainer** (qlonglong imageid, [ImageCommonContainer](#) \*const container)
 

*Returns File-metadata container with user-presentable information.*
- static QDateTime **creationDateFromFilesystem** (const QFileInfo &info)
 

*Returns a suitable creation date from file system information.*
- void **prepareUpdateImage** ()
- void **commitUpdateImage** ()
- bool **scanFromIdenticalFile** ()
- void **scanFile** (ScanMode mode)
- void **scanItemInformation** ()
- void **commitItemInformation** ()

## Operations on Photo Metadata

- static QString **iptcCorePropertyName** (MetadataInfo::Field field)
 

*Helper method to return official property name by which IPTC core properties are stored in the database ([ItemCopyright](#) and [ImageProperties](#) table).*
- static MetadataFields **allImageMetadataFields** ()
- QString **detectImageFormat** () const
- void **scanImageMetadata** ()
- void **commitImageMetadata** ()
- void **scanItemPosition** ()
- void **commitItemPosition** ()

- void **scanItemComments** ()
- void **commitItemComments** ()
- void **scanItemCopyright** ()
- void **commitItemCopyright** ()
- void **scanIPTCCore** ()
- void **commitIPTCCore** ()
- void **scanTags** ()
- void **commitTags** ()
- void **scanFaces** ()
- void **commitFaces** ()
- bool **checkRatingFromMetadata** (const QVariant &ratingFromMetadata) const
- void **checkCreationDateFromMetadata** (QVariant &dateFromMetadata) const

### Operations on Video Metadata

- static void **fillVideoMetadataContainer** (qulonglong imageid, [VideoMetadataContainer](#) \*const container)  
*Returns Video container with user-presentable information.*
- void **scanVideoInformation** ()
- void **scanVideoMetadata** ()
- void **commitVideoMetadata** ()
- QString **detectVideoFormat** () const
- QString **detectAudioFormat** () const
- static MetadataFields **allVideoMetadataFields** ()

## 9.866.1 Constructor & Destructor Documentation

### 9.866.1.1 ItemScanner() [1/3]

```
Digikam::ItemScanner::ItemScanner (
    const QFileInfo & info,
    const ItemScanInfo & Iteminfo )
```

This constructor shall be used with [fileModified\(\)](#) or [fullScan\(\)](#).

### 9.866.1.2 ItemScanner() [2/3]

```
Digikam::ItemScanner::ItemScanner (
    const QFileInfo & info ) [explicit]
```

Use this constructor if you intend to call [newFile\(\)](#).

### 9.866.1.3 ItemScanner() [3/3]

```
Digikam::ItemScanner::ItemScanner (
    qulonglong imageid ) [explicit]
```

File info, Scan info and the category will be retrieved from the database.

## 9.866.2 Member Function Documentation

### 9.866.2.1 commit()

```
void Digikam::ItemScanner::commit ( )
```

You must call this after scanning was done for any changes to take effect. Only this method will perform write operations to the database.

### 9.866.2.2 copiedFrom()

```
void Digikam::ItemScanner::copiedFrom (
    int albumId,
    qlonglong srcId )
```

Call this when you want [ItemScanner](#) to add a new file to the database which is a copy of another file, copying attributes from the src and rescanning other attributes as appropriate. Give the id of the album of the new file, and the id of the src file.

### 9.866.2.3 creationDateFromFilesystem()

```
QDateTime Digikam::ItemScanner::creationDateFromFilesystem (
    const QFileInfo & info ) [static]
```

Use this as a fallback if metadata is not available.

### 9.866.2.4 fileModified()

```
void Digikam::ItemScanner::fileModified ( )
```

Only two groups of fields will be updated in the database:

- filesystem specific properties (those that signaled you that the file has been modified because their state on disk differed from the state in the database)
- image specific properties, for which a difference in the database independent from the actual file does not make sense (width/height, bit depth, color model)

### 9.866.2.5 fillCommonContainer()

```
void Digikam::ItemScanner::fillCommonContainer (
    qlonglong imageid,
    ImageCommonContainer *const container ) [static]
```

These methods provide the reverse service: Not writing into the db, but reading from the db.

### 9.866.2.6 fillVideoMetadataContainer()

```
void Digikam::ItemScanner::fillVideoMetadataContainer (
    qlonglong imageid,
    VideoMetadataContainer *const container ) [static]
```

These methods provide the reverse service: Not writing into the db, but reading from the db.

### 9.866.2.7 iptcCorePropertyName()

```
QString Digikam::ItemScanner::iptcCorePropertyName (
    MetadataInfo::Field field ) [static]
```

Allowed arguments: All MetadataInfo::Fields starting with "IptcCore..."

### 9.866.2.8 itemScanInfo()

```
const ItemScanInfo & Digikam::ItemScanner::itemScanInfo ( ) const
```

The validity depends on the previously executed scan.

### 9.866.2.9 loadFromDisk()

```
void Digikam::ItemScanner::loadFromDisk ( )
```

This method is called from any of the main entry points above. You can call it before if you want to control the time when it is executed. Calling it a second time with data already loaded will do nothing.

### 9.866.2.10 newFileFullScan()

```
void Digikam::ItemScanner::newFileFullScan (
    int albumId )
```

This variant will not use the unique hash to establish identify with an existing entry, but read all information newly from the file.

### 9.866.2.11 resolvedImageHistory()

```
DImageHistory Digikam::ItemScanner::resolvedImageHistory (
    const DImageHistory & history,
    bool mustBeAvailable = false ) [static]
```

In the returned history, the actions are the same, while each referred image actually exists in the collection (if `mustBeAvailable` is true, it is even in a currently available collection). That means the number of referred images may be less or greater than initially. Note that this history may have peculiar properties, like multiple Original or Current entries (if the source entry resolves to multiple collection images), so this history is only for internal use, not for storage.

### 9.866.2.12 resolveImageHistory()

```
bool Digikam::ItemScanner::resolveImageHistory (
    qlonglong id,
    QList< qlonglong > * needTaggingIds = nullptr ) [static]
```

If needTaggingIds is given, all ids marked for needing tagging of the history graph are added.

### 9.866.2.13 sameReferredImage()

```
bool Digikam::ItemScanner::sameReferredImage (
    const HistoryImageId & id1,
    const HistoryImageId & id2 ) [static]
```

Does not check if such a referred image really exists.

### 9.866.2.14 setCategory()

```
void Digikam::ItemScanner::setCategory (
    DatabaseItem::Category category )
```

Required at least for [newFile\(\)](#) calls, recommended for calls with the first constructor above as well.

### 9.866.2.15 sortByProximity()

```
void Digikam::ItemScanner::sortByProximity (
    QList< ItemInfo > & infos,
    const ItemInfo & subject ) [static]
```

Infos are near if they are e.g. in the same album. They are not near if they are e.g. in different collections.

## 9.867 Digikam::ItemSelectionOverlay Class Reference

Inheritance diagram for Digikam::ItemSelectionOverlay:

### Public Member Functions

- **ItemSelectionOverlay** (QObject \*const parent)
- void [setActive](#) (bool active) override  
*Will call [createButton](#)().*

## Public Member Functions inherited from [Digikam::HoverButtonDelegateOverlay](#)

- [HoverButtonDelegateOverlay](#) (QObject \*const parent)
- [ItemViewHoverButton](#) \* **button** () const

## Public Member Functions inherited from [Digikam::AbstractWidgetDelegateOverlay](#)

- [AbstractWidgetDelegateOverlay](#) (QObject \*const parent)  
*This class provides functionality for using a widget in an overlay.*

## Public Member Functions inherited from [Digikam::ItemDelegateOverlay](#)

- [ItemDelegateOverlay](#) (QObject \*const parent=nullptr)
- virtual bool **acceptsDelegate** (QAbstractItemDelegate \*) const
- QAbstractItemDelegate \* **delegate** () const
- virtual void **mouseMoved** (QMouseEvent \*e, const QRect &visualRect, const QModelIndex &index)  
*Only these two methods are implemented as virtual methods.*
- virtual void **paint** (QPainter \*p, const QStyleOptionViewItem &option, const QModelIndex &index)
- void **setDelegate** (QAbstractItemDelegate \*delegate)
- void **setView** (QAbstractItemView \*view)
- QAbstractItemView \* **view** () const

## Protected Slots

- void **slotClicked** (bool checked)

### 9.867.1 Member Function Documentation

#### 9.867.1.1 `createButton()`

```
ItemViewHoverButton * Digikam::ItemSelectionOverlay::createButton ( ) [override], [protected], [virtual]
```

Pass `view()` as parent.

Implements [Digikam::HoverButtonDelegateOverlay](#).

#### 9.867.1.2 `setActive()`

```
void Digikam::ItemSelectionOverlay::setActive ( bool active ) [override], [virtual]
```

Reimplemented from [Digikam::HoverButtonDelegateOverlay](#).

#### 9.867.1.3 `updateButton()`

```
void Digikam::ItemSelectionOverlay::updateButton ( const QModelIndex & index ) [override], [protected], [virtual]
```

Reposition your button here, adjust and store state.

Implements [Digikam::HoverButtonDelegateOverlay](#).

## 9.868 Digikam::ItemSelectionOverlayButton Class Reference

Inheritance diagram for Digikam::ItemSelectionOverlayButton:

### Public Member Functions

— Utilities —
- `static int naturalCompare (const QString &a, const QString &b, Qt::SortOrder sortOrder, Qt::CaseSensitivity caseSensitive=Qt::CaseSensitive, bool natural=true)`  
*Compares the two string by natural comparison and adheres to given sort order.*

## Public Attributes

- `Qt::CaseSensitivity categorizationCaseSensitivity = Qt::CaseSensitive`
- `CategorizationMode categorizationMode = NoCategories`
- `SortOrder categorizationSortOrder = DefaultOrder`
- `Qt::SortOrder currentCategorizationSortOrder = Qt::AscendingOrder`  
*Only Ascending or Descending, never DefaultOrder.*
- `Qt::SortOrder currentSortOrder = Qt::AscendingOrder`
- `Qt::CaseSensitivity sortCaseSensitivity = Qt::CaseSensitive`
- `SortOrder sortOrder = DefaultOrder`
- `SortRole sortRole = SortByFileName`
- `bool strTypeNatural = true`

## 9.872.1 Member Enumeration Documentation

### 9.872.1.1 CategorizationMode

```
enum Digikam::ItemSortSettings::CategorizationMode
```

#### Enumerator

NoCategories	categorization switched off
OneCategory	all items in one global category

### 9.872.1.2 SortOrder

```
enum Digikam::ItemSortSettings::SortOrder
```

## Enumerator

DefaultOrder	sort order depends on the chosen sort role
--------------	--

## 9.872.1.3 SortRole

```
enum Digikam::ItemSortSettings::SortRole
```

## Enumerator

SortByImageSize	pixel number
SortByAspectRatio	width / height * 100000
SortByFaces	count of unconfirmed faces

## 9.872.2 Member Function Documentation

## 9.872.2.1 compare()

```
int Digikam::ItemSortSettings::compare (
    const ItemInfo & left,
    const ItemInfo & right ) const
```

Return -1 if left is less than right, 1 if left is greater than right, and 0 if left equals right comparing the current sort role's value. Adheres to set sort role and sort order.

## 9.872.2.2 compareCategories()

```
int Digikam::ItemSortSettings::compareCategories (
    const ItemInfo & left,
    const ItemInfo & right,
    const FaceTagsIface & leftFace,
    const FaceTagsIface & rightFace ) const
```

Return -1 if left is less than right, 0 if both fall in the same category, and 1 if left is greater than right. Adheres to set categorization mode and current category sort order. Face passed in to allow Categorization by Faces. Pass in an empty Face if not needed.

## 9.872.2.3 lessThan() [1/2]

```
bool Digikam::ItemSortSettings::lessThan (
    const ItemInfo & left,
    const ItemInfo & right ) const
```

Adheres to current sort role and sort order.

### 9.872.2.4 lessThan() [2/2]

```
bool Digikam::ItemSortSettings::lessThan (
    const QVariant & left,
    const QVariant & right ) const
```

Adheres to current sort role and sort order. Use for extraValue, if necessary.

### 9.872.2.5 lessThanByOrder()

```
template<typename T >
static bool Digikam::ItemSortSettings::lessThanByOrder (
    const T & a,
    const T & b,
    Qt::SortOrder sortOrder ) [inline], [static]
```

Returns  $a < b$  if sortOrder is Ascending, or  $b < a$  if order is descending.

### 9.872.2.6 watchFlags()

```
DatabaseFields::Set Digikam::ItemSortSettings::watchFlags ( ) const
```

Returns database fields a change in which would affect the current sorting.

## 9.873 Digikam::ItemTagPair Class Reference

### Public Member Functions

- [ItemTagPair](#) ()
  - This class provides a wrapper over the Database methods to access the properties of tag / image association.*
- **ItemTagPair** (const [ItemInfo](#) &info, int tagId)
- **ItemTagPair** (const [ItemTagPair](#) &other)
- **ItemTagPair** (qulonglong imageId, int tagId)
  - Access the properties of the given image - tag pair.*
- void [addProperty](#) (const QString &key, const QString &value)
  - Adds the given property.*
- QStringList **allValues** (const QStringList &keys) const
  - Returns value() concatenated for all given keys.*
- void **assignTag** ()
  - Assigns the tag to the image.*
- void **clearProperties** ()
  - Removes all properties.*
- bool **hasAnyProperty** (const QStringList &keys) const
  - Returns true if any of the properties is set.*
- bool **hasProperty** (const QString &key) const
  - Returns true if the property is set.*
- bool **hasValue** (const QString &key, const QString &value) const
  - Returns true of the given property and value is set.*
- qulonglong **imageId** () const

- bool **isAssigned** () const  
*Returns if the tag is assigned to the image.*
- bool **isNull** () const
- [ItemTagPair](#) & **operator=** (const [ItemTagPair](#) &other)
- QMap< QString, QString > **properties** () const  
*Returns a map of all key->value pairs.*
- QStringList **propertyKeys** () const  
*Returns all set property keys.*
- void **removeProperties** (const QString &key)  
*Remove all occurrences of the property.*
- void **removeProperty** (const QString &key, const QString &value)  
*Remove all occurrences of the property.*
- void **setProperty** (const QString &key, const QString &value)  
*Set the given property. Replaces all previous occurrences of this property.*
- int **tagId** () const
- void **unAssignTag** ()  
*Removes the tag from the image.*
- QString **value** (const QString &key) const  
*Returns the value of the given property, or a null string if not set.*
- QStringList **values** (const QString &key) const  
*Returns a list of values with the given property.*

### Static Public Member Functions

- static QList< [ItemTagPair](#) > **availablePairs** (const [ItemInfo](#) &info)
- static QList< [ItemTagPair](#) > **availablePairs** (qulonglong imageId)  
*Return all pairs for the given image for which entries exist.*

## 9.873.1 Constructor & Destructor Documentation

### 9.873.1.1 ItemTagPair()

```
Digikam::ItemTagPair::ItemTagPair ( )
```

It is meant to be a short-lived object, it does not listen to external database changes. Creates a null pair.

## 9.873.2 Member Function Documentation

### 9.873.2.1 addProperty()

```
void Digikam::ItemTagPair::addProperty (
    const QString & key,
    const QString & value )
```

Does not change any previous occurrences of this property, allowing multiple properties with the same key. (duplicates of same key *and* value are not added, though)

## Public Slots

- void **assignRating** (const QList< QModelIndex > &index, int rating)
- void **slotDockLocationChanged** (Qt::DockWidgetArea area)

## Public Slots inherited from [Digikam::ItemCategorizedView](#)

- void **hintAt** (const [ItemInfo](#) &info)
 

*Does something to gain attention for info, but not changing current selection.*
- void **openAlbum** (const QList< [Album](#) \* > &album)
- void **setCurrentInfo** (const [ItemInfo](#) &info)
 

*Set as current item the item identified by the imageinfo.*
- void **setCurrentUrl** (const [QUrl](#) &url)
 

*Set as current item the item identified by its file url.*
- void **setCurrentUrlWhenAvailable** (const [QUrl](#) &url)
 

*Set as current item when it becomes available, the item identified by its file url.*
- void **setCurrentWhenAvailable** (qulonglong imageId)
 

*Scroll the view to the given item when it becomes available.*
- void **setSelectedItemInfos** (const QList< [ItemInfo](#) > &infos)
 

*Set selected items.*
- void **setSelectedUrls** (const QList< [QUrl](#) > &urlList)
 

*Set selected items identified by their file urls.*
- void **setThumbnailSize** (int size)

## Public Slots inherited from [Digikam::ItemViewCategorized](#)

- void **copy** () override
- void **cut** () override
- void **hideIndexNotification** ()
- void **paste** () override
- void **showIndexNotification** (const QModelIndex &index, const [QString](#) &message)

## Public Slots inherited from [Digikam::DCategorizedView](#)

- void **reset** () override

## Public Member Functions

- [ItemThumbnailBar](#) ([QWidget](#) \*const parent=nullptr)
- QModelIndex **firstIndex** () const
- void **installOverlays** ()
- QModelIndex **lastIndex** () const
- QModelIndex **nextIndex** (const QModelIndex &index) const
- QModelIndex **previousIndex** (const QModelIndex &index) const
- void **setFlow** ([QListView::Flow](#) newFlow)
- void **setModelsFiltered** ([ItemModel](#) \*model, [ImageSortFilterModel](#) \*filterModel)
 

*This installs a duplicate filter model, if the [ItemModel](#) may contain duplicates.*
- void **setScrollBarPolicy** (Qt::ScrollBarPolicy policy)
 

*Sets the policy always for the one scroll bar which is relevant, depending on orientation.*

## Public Member Functions inherited from [Digikam::ItemCategorizedView](#)

- **ItemCategorizedView** (QWidget \*const parent=nullptr)
- void **addOverlay** ([ItemDelegateOverlay](#) \*overlay, [ItemDelegate](#) \*delegate=nullptr)
 

*Add and remove an overlay. It will as well be removed automatically when destroyed. Unless you pass a different delegate, the current delegate will be used.*
- void **addSelectionOverlay** ([ItemDelegate](#) \*delegate=nullptr)
- [Album](#) \* **albumAt** (const QPoint &pos) const
 

*If the model is categorized by an album, returns the album of the category that contains the position.*
- [ItemInfoList](#) **allItemInfos** () const
- QList< [QUrl](#) > **allUrls** () const
- [Album](#) \* **currentAlbum** () const
- [ItemInfo](#) **currentInfo** () const
- [QUrl](#) **currentUrl** () const
- [ItemDelegate](#) \* **delegate** () const
- [QItemSelectionModel](#) \* **getSelectionModel** () const
- [ItemAlbumFilterModel](#) \* **imageAlbumFilterModel** () const
- [ItemAlbumModel](#) \* **imageAlbumModel** () const
 

*Returns 0 if the [ItemModel](#) is not an [ItemAlbumModel](#).*
- [ItemFilterModel](#) \* **imageFilterModel** () const
 

*Returns any [ItemFilterMode](#) in chain. May not be [sourceModel\(\)](#)*
- [ItemModel](#) \* **imageModel** () const
- [ImageSortFilterModel](#) \* **imageSortFilterModel** () const
- [ItemThumbnailModel](#) \* **imageThumbnailModel** () const
 

*Returns 0 if the [ItemModel](#) is not an [ItemThumbnailModel](#).*
- [QModelIndex](#) **indexForInfo** (const [ItemInfo](#) &info) const
- [ItemInfo](#) **nextInfo** (const [ItemInfo](#) &info)
- [ItemInfo](#) **nextInOrder** (const [ItemInfo](#) &startingPoint, int nth)
 

*Returns the n-th info after the given one.*
- [ItemInfo](#) **previousInfo** (const [ItemInfo](#) &info)
- void **removeOverlay** ([ItemDelegateOverlay](#) \*overlay)
- [ItemInfoList](#) **selectedItemInfos** () const
- [ItemInfoList](#) **selectedItemInfosCurrentFirst** () const
- void **setModels** ([ItemModel](#) \*model, [ImageSortFilterModel](#) \*filterModel)
- virtual void **setThumbnailSize** (const [ThumbnailSize](#) &size)
- [ThumbnailSize](#) **thumbnailSize** () const
- void **toIndex** (const [QUrl](#) &url)
 

*Selects the index as current and scrolls to it.*

## Public Member Functions inherited from [Digikam::ItemViewCategorized](#)

- **ItemViewCategorized** (QWidget \*const parent=nullptr)
- void **awayFromSelection** ()
- [DItemDelegate](#) \* **delegate** () const
- void **invertSelection** ()
- bool **isToolTipEnabled** () const
- int **numberOfSelectedIndexes** () const
- void **scrollTo** (const [QModelIndex](#) &index, [ScrollHint](#) hint=EnsureVisible) override
- void **scrollToRelaxed** (const [QModelIndex](#) &index, [ScrollHint](#) hint=EnsureVisible)
 

*Like [scrollTo](#), but only scrolls if the index is not visible, regardless of hint.*
- void **setInitialSelectedItem** (bool enabled)
 

*Ensure a initial selected item.*

- void **setScrollCurrentToCenter** (bool enabled)  
*Scroll automatically the current index to center of the view.*
- void **setScrollStepGranularity** (int factor)  
*Determine a step size for scrolling: The larger this number, the smaller and more precise is the scrolling.*
- void **setSelectedIndexes** (const QList< QModelIndex > &indexes)
- void **setSpacing** (int spacing)  
*Sets the spacing.*
- void **setToolTipEnabled** (bool enabled)
- void **setUsePointingHandCursor** (bool useCursor)  
*Set if the PointingHand Cursor should be shown over the activation area.*
- void **toFirstIndex** ()  
*Selects the index as current and scrolls to it.*
- void **toIndex** (const QModelIndex &index)
- void **toLastIndex** ()
- void **toNextIndex** ()
- void **toPreviousIndex** ()

## Public Member Functions inherited from Digikam::DCategorizedView

- **DCategorizedView** (QWidget \*const parent=nullptr)
- virtual QModelIndexList **categorizedIndexesIn** (const QRect &rect) const  
*This method will return all indexes whose visual rect intersects rect.*
- virtual QModelIndex **categoryAt** (const QPoint &point) const  
*This method will return the first index of the category in the region of which point is found.*
- **DCategoryDrawer \* categoryDrawer** () const
- virtual QItemSelectionRange **categoryRange** (const QModelIndex &index) const  
*This method returns the range of indexes contained in the category in which index is sorted.*
- virtual QRect **categoryVisualRect** (const QModelIndex &index) const  
*This method will return the visual rect of the header of the category in which index is sorted.*
- QModelIndex **indexAt** (const QPoint &point) const override
- void **setCategoryDrawer** (DCategoryDrawer \*categoryDrawer)
- void **setDrawDraggedItems** (bool drawDraggedItems)  
*Switch on drawing of dragged items.*
- void **setGridSize** (const QSize &size)
- void **setModel** (QAbstractItemModel \*model) override
- QRect **visualRect** (const QModelIndex &index) const override

## Public Member Functions inherited from Digikam::DragDropViewImplementation

- void **mousePressEvent** (QMouseEvent \*event) override
- void **mouseReleaseEvent** (QMouseEvent \*event) override
- QModelIndex **moveCursor** (CursorAction cursorAction, Qt::KeyboardModifiers modifiers) override
- void **paintEvent** (QPaintEvent \*event) override
- void **resizeEvent** (QResizeEvent \*event) override
- void **setSelection** (const QRect &rect, QItemSelectionModel::SelectionFlags flags) override
- void **startDrag** (Qt::DropActions supportedActions) override

### Protected Member Functions inherited from Digikam::DragDropViewImplementation

- virtual QAbstractItemView \* **asView** ()=0
 

*This one is implemented by DECLARE\_VIEW\_DRAG\_DROP\_METHODS.*
- bool **decodelsCutSelection** (const QMimeData \*mimeData)
- void **dragEnterEvent** (QDragEnterEvent \*event)
 

*Implements the relevant QAbstractItemView methods for drag and drop.*
- void **dragMoveEvent** (QDragMoveEvent \*e)
- void **dropEvent** (QDropEvent \*e)
- void **encodelsCutSelection** (QMimeData \*mime, bool isCutSelection)
- void **startDrag** (Qt::DropActions supportedActions)

### Additional Inherited Members

### Signals inherited from Digikam::ItemCategorizedView

- void **currentChanged** (const ItemInfo &info)
- void **deselected** (const QList< ItemInfo > &nowDeselectedInfos)
 

*Emitted when items are deselected. There may be other selected infos left. This signal is not emitted when the model is reset; then only selectionCleared is emitted.*
- void **imageActivated** (const ItemInfo &info)
 

*Emitted when the given image is activated. Info is never null.*
- void **modelChanged** ()
 

*Emitted when a new model is set.*
- void **selected** (const QList< ItemInfo > &newSelectedInfos)
 

*Emitted when new items are selected. The parameter includes only the newly selected infos, there may be other already selected infos.*

## Signals inherited from [Digikam::ItemViewCategorized](#)

- void [clicked](#) (const QMouseEvent \*e, const QModelIndex &index)  
*For overlays: Like the respective parent class signals, but with additional info.*
- void [entered](#) (const QMouseEvent \*e, const QModelIndex &index)
- void [keyPressed](#) (QKeyEvent \*e)  
*Remember you may want to check if the event is accepted or ignored.*
- void [selectionChanged](#) ()  
*Emitted when any selection change occurs.*
- void [selectionCleared](#) ()  
*Emitted when the selection is completely cleared.*
- void [viewportClicked](#) (const QMouseEvent \*e)  
*While [clicked\(\)](#) is emitted with a valid index, this corresponds to clicking on empty space.*
- void [zoomInStep](#) ()
- void [zoomOutStep](#) ()

## Protected Slots inherited from [Digikam::ItemCategorizedView](#)

- void [slotCurrentUrlTimer](#) ()
- void [slotItemInfosAdded](#) ()

## Protected Slots inherited from [Digikam::ItemViewCategorized](#)

- void [layoutAboutToBeChanged](#) ()
- void [layoutWasChanged](#) ()
- void [slotActivated](#) (const QModelIndex &index)
- void [slotClicked](#) (const QModelIndex &index)
- void [slotEntered](#) (const QModelIndex &index)
- virtual void [slotThemeChanged](#) ()

## Protected Slots inherited from [Digikam::DCategorizedView](#)

- void [currentChanged](#) (const QModelIndex &current, const QModelIndex &previous) override
- void [rowsInserted](#) (const QModelIndex &parent, int start, int end) override
- virtual void [rowsInsertedArtificial](#) (const QModelIndex &parent, int start, int end)
- virtual void [slotLayoutChanged](#) ()
- void [updateGeometries](#) () override

## 9.874.1 Member Function Documentation

### 9.874.1.1 [hasHiddenGroupedImages\(\)](#)

```
bool Digikam::ItemThumbnailBar::hasHiddenGroupedImages (
    const ItemInfo & ) const [override], [protected], [virtual]
```

Reimplemented from [Digikam::GroupingViewImplementation](#).

### 9.874.1.2 setModelsFiltered()

```
void Digikam::ItemThumbnailBar::setModelsFiltered (
    ItemModel * model,
    ImageSortFilterModel * filterModel )
```

Otherwise, just use setModels().

### 9.874.1.3 slotSetupChanged()

```
void Digikam::ItemThumbnailBar::slotSetupChanged ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemViewCategorized](#).

## 9.875 Digikam::ItemThumbnailDelegate Class Reference

Inheritance diagram for Digikam::ItemThumbnailDelegate:

### Public Member Functions

- **ItemThumbnailDelegate** (**ItemCategorizedView** \*const parent)
- bool **acceptsActivation** (const QPoint &pos, const QRect &visualRect, const QModelIndex &index, QRect \*activationRect) const override

- int **maximumSize** () const  
*Returns the minimum or maximum viewport size in the limiting dimension, width or height, depending on current flow.*
- int **minimumSize** () const
- void **setDefaultViewOptions** (const QStyleOptionViewItem &option) override  
*Style option with standard values to use for cached rendering.*
- void **setFlow** (QListView::Flow flow)

## Public Member Functions inherited from Digikam::ItemDelegate

- **ItemDelegate** (QWidget \*const parent)
- bool **acceptsToolTip** (const QPoint &pos, const QRect &visualRect, const QModelIndex &index, QRect \*tooltipRect=nullptr) const override  
*These methods take four parameters: The position on viewport, the rect on viewport, the index, and optionally a parameter into which, if the return value is true, a rectangle can be written for which the return value will be true as well.*
- QRect **actualPixmapRect** (const QModelIndex &index) const
- int **calculatethumbSizeToFit** (int ws)
- **ItemCategoryDrawer** \* **categoryDrawer** () const
- QRect **commentsRect** () const
- QRect **coordinatesIndicatorRect** () const
- QRect **groupIndicatorRect** () const
- QRect **imageInformationRect** () const override  
*Returns the area where the image information is drawn, or null if empty / not supported.*
- void **paint** (QPainter \*painter, const QStyleOptionViewItem &option, const QModelIndex &index) const override
- QPixmap **pixmapForDrag** (const QStyleOptionViewItem &option, const QList< QModelIndex > &indexes) const override
- QRect **pixmapRect** () const override  
*Returns the area where the pixmap is drawn, or null if not supported.*
- void **setSpacing** (int spacing) override
- void **setView** (ItemCategorizedView \*view)
- QRect **tagsRect** () const

## Public Member Functions inherited from Digikam::ItemViewDelegate

- **ItemViewDelegate** (QWidget \*const parent)
- bool **acceptsActivation** (const QPoint &pos, const QRect &visualRect, const QModelIndex &index, QRect \*activationRect=nullptr) const override
- bool **acceptsToolTip** (const QPoint &pos, const QRect &visualRect, const QModelIndex &index, QRect \*tooltipRect=nullptr) const override  
*These methods take four parameters: The position on viewport, the rect on viewport, the index, and optionally a parameter into which, if the return value is true, a rectangle can be written for which the return value will be true as well.*
- double **displayRatio** () const
- QSize **gridSize** () const override  
*Returns the gridsize to be set by the view.*
- void **mouseMoved** (QMouseEvent \*e, const QRect &visualRect, const QModelIndex &index) override
- virtual QRect **ratingRect** () const  
*Returns the rectangle where the rating is drawn, or a null rectangle if not supported.*
- QRect **rect** () const
- void **setDefaultViewOptions** (const QStyleOptionViewItem &option) override  
*Style option with standard values to use for cached rendering.*

- void [setRatingEdited](#) (const QModelIndex &index)  
*Can be used to temporarily disable drawing of the rating.*
- void [setSpacing](#) (int spacing) override
- void [setThumbnailSize](#) (const [ThumbnailSize](#) &thumbSize) override  
*You must set these options from the view.*
- QSize **sizeHint** (const QStyleOptionViewItem &option, const QModelIndex &index) const override
- int **spacing** () const
- [ThumbnailSize](#) **thumbnailSize** () const

## Public Member Functions inherited from [Digikam::DItemDelegate](#)

- **DItemDelegate** (QObject \*const parent=nullptr)

## Public Member Functions inherited from [Digikam::ItemDelegateOverlayContainer](#)

- [ItemDelegateOverlayContainer](#) ()=default  
*This is a sample implementation for delegate management methods, to be inherited by a delegate.*
- void **installOverlay** ([ItemDelegateOverlay](#) \*overlay)
- void **mouseMoved** (QMouseEvent \*e, const QRect &visualRect, const QModelIndex &index)
- QList< [ItemDelegateOverlay](#) \* > **overlays** () const
- void **removeAllOverlays** ()
- void **removeOverlay** ([ItemDelegateOverlay](#) \*overlay)
- void **setAllOverlaysActive** (bool active)
- void **setViewOnAllOverlays** (QAbstractItemView \*view)

## Protected Member Functions

- void [updateContentWidth](#) () override  
*Reimplement this to set contentWidth.*
- void [updateRects](#) () override  
*In a subclass, you need to implement this method to set up the rects for drawing.*

## Protected Member Functions inherited from [Digikam::ItemDelegate](#)

- **ItemDelegate** (ItemDelegate::ItemDelegatePrivate &dd, QWidget \*const parent)
- void [clearCaches](#) () override
- virtual void **clearModelDataCaches** ()  
*Reimplement to clear caches based on model indexes (hash on row number etc.) Change signals are listened to this is called whenever such properties become invalid.*
- void [invalidatePaintingCache](#) () override
- bool **onActualPixmapRect** (const QPoint &pos, const QRect &visualRect, const QModelIndex &index, QRect \*actualRect) const
- void **setModel** (QAbstractItemModel \*model)
- virtual QPixmap **thumbnailPixmap** (const QModelIndex &index) const
- void **updateActualPixmapRect** (const QModelIndex &index, const QRect &rect)
- void [updateSizeRectsAndPixmaps](#) () override

## Protected Member Functions inherited from Digikam::ItemViewDelegate

- **ItemViewDelegate** (ItemViewDelegatePrivate &dd, QWidget \*const parent)
- QAbstractItemDelegate \* **asDelegate** () override
 

*Returns the delegate, typically, the derived class.*
- void **drawAspectRatio** (QPainter \*p, const QRect &dimsRect, const QSize &dims) const

## 9.875.1 Member Function Documentation

### 9.875.1.1 acceptsActivation()

```
bool Digikam::ItemThumbnailDelegate::acceptsActivation (
    const QPoint & pos,
    const QRect & visualRect,
    const QModelIndex & index,
    QRect * activationRect ) const [override], [virtual]
```

Reimplemented from [Digikam::ItemDelegate](#).

### 9.875.1.2 setDefaultViewOptions()

```
void Digikam::ItemThumbnailDelegate::setDefaultViewOptions (
    const QStyleOptionViewItem & option ) [override], [virtual]
```

option.rect shall be the viewport rectangle. Call on resize, font change.

Reimplemented from [Digikam::ItemDelegate](#).

### 9.875.1.3 updateContentWidth()

```
void Digikam::ItemThumbnailDelegate::updateContentWidth ( ) [override], [protected], [virtual]
```

This is the maximum width of all content rectangles, typically excluding margins on both sides.

Reimplemented from [Digikam::ItemDelegate](#).

### 9.875.1.4 updateRects()

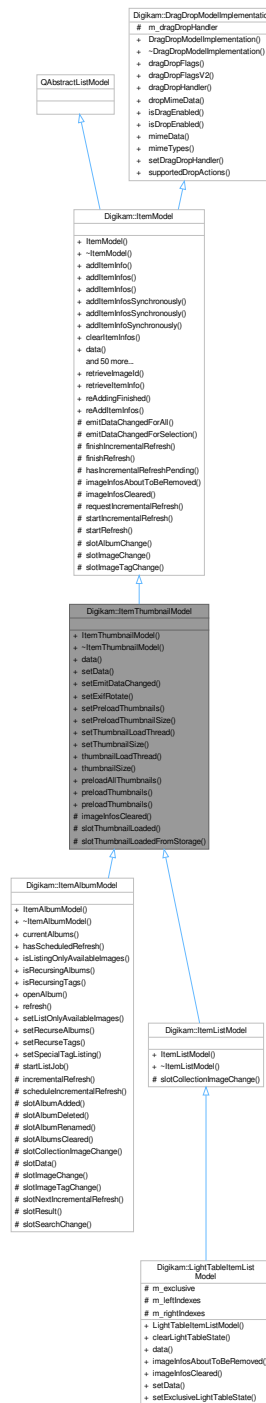

```
void Digikam::ItemThumbnailDelegate::updateRects ( ) [override], [protected], [virtual]
```

The paint() method operates depending on these rects.

Implements [Digikam::ItemDelegate](#).

## 9.876 Digikam::ItemThumbnailModel Class Reference

Inheritance diagram for Digikam::ItemThumbnailModel:

### Public Slots

- void **preloadAllThumbnails** ()
- void **preloadThumbnails** (const QList< [ItemInfo](#) > &)  
*Preload thumbnail for the given infos resp.*
- void **preloadThumbnails** (const QList< [QModelIndex](#) > &)

## Public Slots inherited from Digikam::ItemModel

- void **reAddingFinished** ()
- void **reAddItemInfos** (const QList< [ItemInfo](#) > &infos, const QList< QVariant > &extraValues)

## Signals

- void **thumbnailAvailable** (const QModelIndex &index, int requestedSize)
- void **thumbnailFailed** (const QModelIndex &index, int requestedSize)

## Signals inherited from Digikam::ItemModel

- void **allRefreshingFinished** ()  
*Signals that the model has finished currently with all scheduled refreshing, full or incremental, and all preprocessing.*
- void **imageChange** (const [ImageChangeset](#) &, const QItemSelection &)  
*If an [ImageChangeset](#) affected indexes of this model with changes as set in [watchFlags\(\)](#), this signal contains the changeset and the affected indexes.*
- void **imageInfosAboutToBeAdded** (const QList< [ItemInfo](#) > &infos)  
*Informs that ItemInfos will be added to the model.*
- void **imageInfosAboutToBeRemoved** (const QList< [ItemInfo](#) > &infos)  
*Informs that ItemInfos will be removed from the model.*
- void **imageInfosAdded** (const QList< [ItemInfo](#) > &infos)  
*Informs that ItemInfos have been added to the model.*
- void **imageInfosRemoved** (const QList< [ItemInfo](#) > &infos)  
*Informs that ItemInfos have been removed from the model.*
- void **imageTagChange** (const [ImageTagChangeset](#) &, const QItemSelection &)  
*If an [ImageTagChangeset](#) affected indexes of this model, this signal contains the changeset and the affected indexes.*
- void **preprocess** (const QList< [ItemInfo](#) > &infos, const QList< QVariant > &)  
*Connect to this signal only if you are the current preprocessor.*
- void **processAdded** (const QList< [ItemInfo](#) > &infos, const QList< QVariant > &)
- void **readyForIncrementalRefresh** ()  
*Signals that the model is right now ready to start an incremental refresh.*

## Public Member Functions

- [ItemThumbnailModel](#) (QWidget \*const parent)  
*An [ItemModel](#) that supports thumbnail loading.*
- QVariant **data** (const QModelIndex &index, int role=Qt::DisplayRole) const override  
*Handles the ThumbnailRole.*
- bool **setData** (const QModelIndex &index, const QVariant &value, int role=Qt::DisplayRole) override  
*You can override the current thumbnail size by giving an integer value for ThumbnailRole.*
- void **setEmitDataChanged** (bool emitSignal)  
*Enable emitting [dataChanged\(\)](#) when a thumbnail becomes available.*
- void **setExifRotate** (bool rotate)
- void **setPreloadThumbnails** (bool preload)  
*Enable preloading of thumbnails: If preloading is enabled, for every entry in the model a thumbnail generation is started.*
- void **setPreloadThumbnailSize** (const [ThumbnailSize](#) &thumbSize)  
*If you want to fix a size for preloading, do it here.*
- void **setThumbnailLoadThread** ([ThumbnailLoadThread](#) \*const thread)  
*Enable thumbnail loading and set the thread that shall be used.*
- void **setThumbnailSize** (const [ThumbnailSize](#) &thumbSize)  
*Set the thumbnail size to use.*
- [ThumbnailLoadThread](#) \* **thumbnailLoadThread** () const
- [ThumbnailSize](#) **thumbnailSize** () const

## Public Member Functions inherited from [Digikam::ItemModel](#)

- **ItemModel** (QObject \*const parent=nullptr)
- void **addItemInfo** (const [ItemInfo](#) &info)
  - Main entry point for subclasses adding image infos to the model.*
- void **addItemInfos** (const QList< [ItemInfo](#) > &infos)
- void **addItemInfos** (const QList< [ItemInfo](#) > &infos, const QList< QVariant > &extraValues)
- void **addItemInfosSynchronously** (const QList< [ItemInfo](#) > &infos)
- void **addItemInfosSynchronously** (const QList< [ItemInfo](#) > &infos, const QList< QVariant > &extraValues)
- void **addItemInfoSynchronously** (const [ItemInfo](#) &info)
  - addItemInfo() is asynchronous if a preprocessor is set.*
- void **clearItemInfos** ()
  - Clears image infos and resets model.*
- QVariant **data** (const QModelIndex &index, int role=Qt::DisplayRole) const override
- void **ensureHasGroupedImages** (const [ItemInfo](#) &groupLeader)
  - Ensure that all images grouped on the given leader are contained in the model.*
- void **ensureHasItemInfo** (const [ItemInfo](#) &info)
  - Add the given entries.*
- void **ensureHasItemInfos** (const QList< [ItemInfo](#) > &infos)
- void **ensureHasItemInfos** (const QList< [ItemInfo](#) > &infos, const QList< QVariant > &extraValues)
- Qt::ItemFlags **flags** (const QModelIndex &index) const override
- bool **hasImage** (const [ItemInfo](#) &info) const
- bool **hasImage** (const [ItemInfo](#) &info, const QVariant &extraValue) const
- bool **hasImage** (qulonglong id) const
- bool **hasImage** (qulonglong id, const QVariant &extraValue) const
- QVariant **headerData** (int section, Qt::Orientation orientation, int role=Qt::DisplayRole) const override
- qulonglong **imageId** (const QModelIndex &index) const
- qulonglong **imageId** (int row) const
- QList< qulonglong > **imageIds** () const
- QList< qulonglong > **imageIds** (const QList< QModelIndex > &indexes) const
- [ItemInfo](#) **imageInfo** (const QModelIndex &index) const
  - Returns the ItemInfo object, reference or image id from the underlying data pointed to by the index.*
- [ItemInfo](#) **imageInfo** (const QString &filePath) const
- [ItemInfo](#) **imageInfo** (int row) const
  - Returns the ItemInfo object, reference or image id from the underlying data of the given row (parent is the invalid QModelIndex, column is 0).*
- [ItemInfo](#) & **imageInfoRef** (const QModelIndex &index) const
- [ItemInfo](#) & **imageInfoRef** (int row) const
- QList< [ItemInfo](#) > **imageInfos** () const
- QList< [ItemInfo](#) > **imageInfos** (const QList< QModelIndex > &indexes) const
- QList< [ItemInfo](#) > **imageInfos** (const QString &filePath) const
- QModelIndex **index** (int row, int column=0, const QModelIndex &parent=QModelIndex()) const override
- QList< QModelIndex > **indexesForImageId** (qulonglong id) const
- QList< QModelIndex > **indexesForItemInfo** (const [ItemInfo](#) &info) const
- QList< QModelIndex > **indexesForPath** (const QString &filePath) const
- QModelIndex **indexForImageId** (qulonglong id) const
- QModelIndex **indexForImageId** (qulonglong id, const QVariant &extraValue) const
- QModelIndex **indexForItemInfo** (const [ItemInfo](#) &info) const
  - Return the index for the given ItemInfo or id, if contained in this model.*
- QModelIndex **indexForItemInfo** (const [ItemInfo](#) &info, const QVariant &extraValue) const
- QModelIndex **indexForPath** (const QString &filePath) const
  - Returns the index or ItemInfo object from the underlying data for the given file path.*
- bool **isEmpty** () const

- bool **isRefreshing** () const  
*Returns true if this model is currently refreshing.*
- int **itemCount** () const
- bool **keepsFilePathCache** () const
- int **numberOfIndexesForImageId** (qulonglong id) const
- int **numberOfIndexesForItemInfo** (const [ItemInfo](#) &info) const
- void **removeIndex** (const QModelIndex &indexes)  
*Directly remove the given indexes or infos from the model.*
- void **removeIndexes** (const QList< QModelIndex > &indexes)
- void **removeItemInfo** (const [ItemInfo](#) &info)
- void **removeItemInfos** (const QList< [ItemInfo](#) > &infos)
- void **removeItemInfos** (const QList< [ItemInfo](#) > &infos, const QList< QVariant > &extraValues)
- int **rowCount** (const QModelIndex &parent=QModelIndex()) const override
- void **setItemInfos** (const QList< [ItemInfo](#) > &infos)  
*Clears and adds the infos.*
- void **setKeepsFilePathCache** (bool keepCache)  
*If a cache is kept, lookup by file path is fast, without a cache it is O(n).*
- DECLARE\_MODEL\_DRAG\_DROP\_METHODS void **setPreprocessor** (QObject \*const processor)  
*Install an object as a preprocessor for ItemInfos added to this model.*
- void **setSendRemovalSignals** (bool send)  
*Enable sending of imageInfosAboutToBeRemoved and imageInfosRemoved signals.*
- void **setWatchFlags** (const [DatabaseFields::Set](#) &set)  
*Set a set of database fields to watch.*
- QList< [ItemInfo](#) > **uniqueItemInfos** () const
- void **unsetPreprocessor** (QObject \*const processor)

## Public Member Functions inherited from [Digikam::DragDropModelImplementation](#)

## Static Public Member Functions inherited from [Digikam::ItemModel](#)

- static qulonglong **retrieveImageId** (const [QModelIndex](#) &index)
- static [ItemInfo](#) **retrieveItemInfo** (const [QModelIndex](#) &index)  
*Retrieves the imageInfo object from the data() method of the given index.*

## Protected Attributes inherited from [Digikam::DragDropModelImplementation](#)

- [AbstractItemDragDropHandler](#) \* **m\_dragDropHandler** = nullptr

## 9.876.1 Constructor & Destructor Documentation

### 9.876.1.1 ItemThumbnailModel()

```
Digikam::ItemThumbnailModel::ItemThumbnailModel (
    QWidget *const parent ) [explicit]
```

You need to set a [ThumbnailLoadThread](#) to enable thumbnail loading. Adjust the thumbnail size to your needs. Note that `setKeepsFilePathCache` is enabled per default.

## 9.876.2 Member Function Documentation

### 9.876.2.1 data()

```
QVariant Digikam::ItemThumbnailModel::data (
    const QModelIndex & index,
    int role = Qt::DisplayRole ) const [override]
```

If the pixmap is available, returns it in the QVariant. If it still needs to be loaded, returns a null QVariant and emits `thumbnailAvailable()` as soon as it is available.

### 9.876.2.2 imageInfosCleared()

```
void Digikam::ItemThumbnailModel::imageInfosCleared ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemModel](#).

### 9.876.2.3 preloadThumbnails

```
void Digikam::ItemThumbnailModel::preloadThumbnails (
    const QList< ItemInfo > & infos ) [slot]
```

indexes. Note: Use `setPreloadThumbnails` to automatically preload all entries in the model. Note: This only ensures thumbnail generation. It is not guaranteed that pixmaps are stored in the cache. For thumbnails that are expect to be drawn immediately, include them in `prepareThumbnails()`. Note: Stops preloading of previously added thumbnails.

### 9.876.2.4 setData()

```
bool Digikam::ItemThumbnailModel::setData (
    const QModelIndex & index,
    const QVariant & value,
    int role = Qt::DisplayRole ) [override]
```

Set a null QVariant to use the thumbnail size set by `setThumbnailSize()` again. The index given here is ignored for this purpose.

### 9.876.2.5 setEmitDataChanged()

```
void Digikam::ItemThumbnailModel::setEmitDataChanged (
    bool emitSignal )
```

The thumbnailAvailable() signal will be emitted in any case. Default is true.

### 9.876.2.6 setPreloadThumbnails()

```
void Digikam::ItemThumbnailModel::setPreloadThumbnails (
    bool preload )
```

Default: false.

### 9.876.2.7 setThumbnailLoadThread()

```
void Digikam::ItemThumbnailModel::setThumbnailLoadThread (
    ThumbnailLoadThread *const thread )
```

The thumbnail size of this thread will be adjusted.

## 9.877 Digikam::ItemVersionsModel Class Reference

Inheritance diagram for Digikam::ItemVersionsModel:

### Public Slots

- void **setPaintTree** (bool paint)
- void **slotAnimationStep** ()

### Public Member Functions

- **ItemVersionsModel** (QObject \*const parent=nullptr)
- void **clearModelData** ()
- QString **currentSelectedImage** () const
- QModelIndex **currentSelectedImageIndex** () const
- QVariant **data** (const QModelIndex &index, int role=Qt::DisplayRole) const override

## Protected Member Functions inherited from [Digikam::DragDropViewImplementation](#)

- virtual `QAbstractItemView * asView ()=0`  
*This one is implemented by `DECLARE_VIEW_DRAG_DROP_METHODS`.*
- bool `decodelsCutSelection` (const `QMimeData *mimeData`)
- virtual `AbstractItemDragDropHandler * dragDropHandler ()` const =0  
*You need to implement these three methods Returns the drag drop handler.*
- void `dragEnterEvent` (`QDragEnterEvent *event`)  
*Implements the relevant QAbstractItemView methods for drag and drop.*
- void `dragMoveEvent` (`QDragMoveEvent *e`)
- void `dropEvent` (`QDropEvent *e`)
- void `encodelsCutSelection` (`QMimeData *mime`, bool `isCutSelection`)
- void `startDrag` (`Qt::DropActions supportedActions`)

### 9.878.1 Member Function Documentation

#### 9.878.1.1 clicked

```
void Digikam::ItemViewCategorized::clicked (
    const QMouseEvent * e,
    const QModelIndex & index ) [signal]
```

Do not change the mouse events.

#### 9.878.1.2 filterModel()

```
virtual QSortFilterProxyModel * Digikam::ItemViewCategorized::filterModel ( ) const [pure virtual]
```

Implemented in [ShowFoto::ShowfotoCategorizedView](#), and [Digikam::ImportCategorizedView](#).

#### 9.878.1.3 keyPressed

```
void Digikam::ItemViewCategorized::keyPressed (
    QKeyEvent * e ) [signal]
```

This signal is emitted after being handled by this widget. You can accept it if ignored.

#### 9.878.1.4 mapIndexForDragDrop()

```
QModelIndex Digikam::ItemViewCategorized::mapIndexForDragDrop (
    const QModelIndex & index ) const [override], [protected], [virtual]
```

`cut()`, `copy()`, `paste()`, [dragEnterEvent\(\)](#), `dragMoveEvent()`, `dropEvent()`, `startDrag()` are implemented by [DragDropViewImplementation](#)

Implements [Digikam::DragDropViewImplementation](#).

### 9.878.1.5 nextIndexHint()

```
QModelIndex Digikam::ItemViewCategorized::nextIndexHint (
    const QModelIndex & indexToAnchor,
    const QItemSelectionRange & removed ) const [protected], [virtual]
```

The default implementation returns the next remaining sibling.

Reimplemented in [Digikam::ItemCategorizedView](#), [ShowFoto::ShowfotoCategorizedView](#), and [Digikam::ImportCategorizedView](#).

### 9.878.1.6 pixmapForDrag()

```
QPixmap Digikam::ItemViewCategorized::pixmapForDrag (
    const QList< QModelIndex > & indexes ) const [override], [protected], [virtual]
```

Implements [Digikam::DragDropViewImplementation](#).

### 9.878.1.7 rowsRemoved()

```
void Digikam::ItemViewCategorized::rowsRemoved (
    const QModelIndex & parent,
    int start,
    int end ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::DCategorizedView](#).

### 9.878.1.8 selectionChanged

```
void Digikam::ItemViewCategorized::selectionChanged ( ) [signal]
```

Any of the signals below will be emitted before.

### 9.878.1.9 setScrollStepGranularity()

```
void Digikam::ItemViewCategorized::setScrollStepGranularity (
    int factor )
```

Default is 10.

### 9.878.1.10 setSpacing()

```
void Digikam::ItemViewCategorized::setSpacing (
    int spacing )
```

Does not use [setSpacing\(\)/spacing\(\)](#) from [QListView](#)

### 9.878.1.11 showContextMenuOnIndex()

```
void Digikam::ItemViewCategorized::showContextMenuOnIndex (
    QContextMenuEvent * event,
    const QModelIndex & index ) [protected], [virtual]
```

Reimplemented in [Digikam::ItemCategorizedView](#), [ShowFoto::ShowfotoCategorizedView](#), and [Digikam::ImportCategorizedView](#).

### 9.878.1.12 showToolTip()

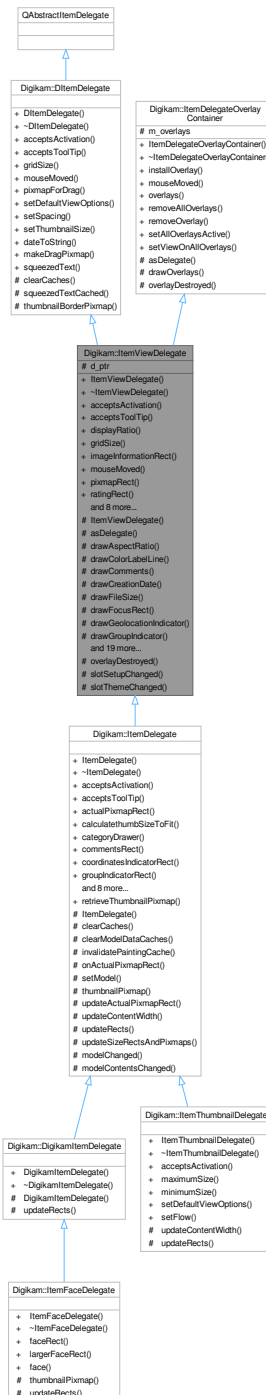

```
bool Digikam::ItemViewCategorized::showToolTip (
    const QModelIndex & index,
    QStyleOptionViewItem & option,
    QHelpEvent * e = nullptr ) [protected], [virtual]
```

Returns true if a tooltip was shown. The help event is optional.

## 9.879 Digikam::ItemViewDelegate Class Reference

Inheritance diagram for Digikam::ItemViewDelegate:

### Signals

- void **hideNotification** ()
- void **requestNotification** (const QModelIndex &index, const QString &message)

## Signals inherited from [Digikam::DItemDelegate](#)

- void **gridSizeChanged** (const QSize &newSize)
- void **visualChange** ()

## Public Member Functions

## 9.879.1 Member Function Documentation

### 9.879.1.1 acceptsActivation()

```
bool Digikam::ItemViewDelegate::acceptsActivation (
    const QPoint & pos,
    const QRect & visualRect,
    const QModelIndex & index,
    QRect * activationRect = nullptr ) const [override], [virtual]
```

Implements [Digikam::DItemDelegate](#).

### 9.879.1.2 acceptsToolTip()

```
bool Digikam::ItemViewDelegate::acceptsToolTip (
    const QPoint & pos,
    const QRect & visualRect,
    const QModelIndex & index,
    QRect * tooltipRect = nullptr ) const [override], [virtual]
```

Implements [Digikam::DItemDelegate](#).

### 9.879.1.3 asDelegate()

```
QAbstractItemDelegate * Digikam::ItemViewDelegate::asDelegate ( ) [override], [protected], [virtual]
```

Implements [Digikam::ItemDelegateOverlayContainer](#).

### 9.879.1.4 gridSize()

```
QSize Digikam::ItemViewDelegate::gridSize ( ) const [override], [virtual]
```

It's sizeHint plus spacing.

Implements [Digikam::DItemDelegate](#).

### 9.879.1.5 imageInformationRect()

```
QRect Digikam::ItemViewDelegate::imageInformationRect ( ) const [virtual]
```

The image information is textual or graphical information, but not the pixmap. The [ratingRect\(\)](#) will e.g. typically be contained in this area.

Reimplemented in [Digikam::ItemDelegate](#).

### 9.879.1.6 mouseMoved()

```
void Digikam::ItemViewDelegate::mouseMoved (
    QMouseEvent * e,
    const QRect & visualRect,
    const QModelIndex & index ) [override], [virtual]
```

#### Note

to be called by [ItemViewCategorized](#) only

Implements [Digikam::DItemDelegate](#).

### 9.879.1.7 pixmapRect()

```
QRect Digikam::ItemViewDelegate::pixmapRect ( ) const [virtual]
```

Reimplemented in [Digikam::ItemDelegate](#).

### 9.879.1.8 setDefaultViewOptions()

```
void Digikam::ItemViewDelegate::setDefaultViewOptions (
    const QStyleOptionViewItem & option ) [override], [virtual]
```

option.rect shall be the viewport rectangle. Call on resize, font change.

Implements [Digikam::DItemDelegate](#).

### 9.879.1.9 setRatingEdited()

```
void Digikam::ItemViewDelegate::setRatingEdited (
    const QModelIndex & index )
```

Call with QModelIndex() afterwards.

### 9.879.1.10 setSpacing()

```
void Digikam::ItemViewDelegate::setSpacing (
    int spacing ) [override], [virtual]
```

Implements [Digikam::DItemDelegate](#).

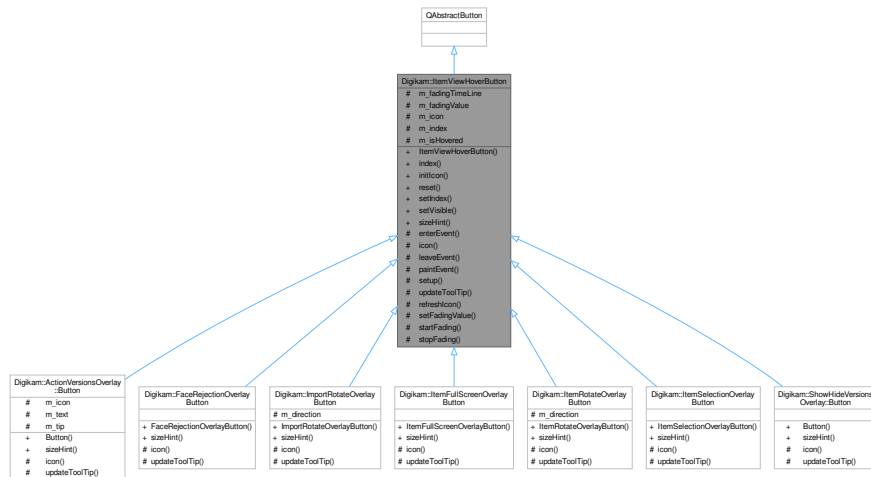

### 9.879.1.11 setThumbnailSize()

```
void Digikam::ItemViewDelegate::setThumbnailSize (
    const ThumbnailSize & thumbSize ) [override], [virtual]
```

Implements [Digikam::DItemDelegate](#).

## 9.880 Digikam::ItemViewHoverButton Class Reference

Inheritance diagram for Digikam::ItemViewHoverButton:

### Public Member Functions

- **ItemViewHoverButton** (QAbstractItemView \*const parentView)

## 9.880.1 Member Function Documentation

### 9.880.1.1 icon()

```
virtual QIcon Digikam::ItemViewHoverButton::icon ( ) [protected], [pure virtual]
```

Will be queried again on toggle.

Implemented in [Digikam::FaceRejectionOverlayButton](#), [Digikam::ItemFullScreenOverlayButton](#), [Digikam::ItemRotateOverlayButton](#), [Digikam::ItemSelectionOverlayButton](#), and [Digikam::ImportRotateOverlayButton](#).

### 9.880.1.2 sizeHint()

```
QSize Digikam::ItemViewHoverButton::sizeHint ( ) const [override], [pure virtual]
```

Implemented in [Digikam::FaceRejectionOverlayButton](#), [Digikam::ItemFullScreenOverlayButton](#), [Digikam::ItemRotateOverlayButton](#), [Digikam::ItemSelectionOverlayButton](#), and [Digikam::ImportRotateOverlayButton](#).

### 9.880.1.3 updateToolTip()

```
void Digikam::ItemViewHoverButton::updateToolTip ( ) [protected], [virtual]
```

Will be called again on state change.

Reimplemented in [Digikam::FaceRejectionOverlayButton](#), [Digikam::ItemFullScreenOverlayButton](#), [Digikam::ItemRotateOverlayButton](#), [Digikam::ItemSelectionOverlayButton](#), and [Digikam::ImportRotateOverlayButton](#).

## 9.881.1 Member Function Documentation

### 9.881.1.1 `acceptsActivation()`

```
bool Digikam::ItemViewImportDelegate::acceptsActivation (
    const QPoint & pos,
    const QRect & visualRect,
    const QModelIndex & index,
    QRect * activationRect = nullptr ) const [override], [virtual]
```

Implements [Digikam::DItemDelegate](#).

### 9.881.1.2 `acceptsToolTip()`

```
bool Digikam::ItemViewImportDelegate::acceptsToolTip (
    const QPoint & pos,
    const QRect & visualRect,
    const QModelIndex & index,
    QRect * tooltipRect = nullptr ) const [override], [virtual]
```

Implements [Digikam::DItemDelegate](#).

### 9.881.1.3 `asDelegate()`

```
QAbstractItemDelegate * Digikam::ItemViewImportDelegate::asDelegate ( ) [override], [protected],
[virtual]
```

Implements [Digikam::ItemDelegateOverlayContainer](#).

#### 9.881.1.4 gridSize()

```
QSize Digikam::ItemViewImportDelegate::gridSize ( ) const [override], [virtual]
```

It's sizeHint plus spacing.

Implements [Digikam::DItemDelegate](#).

#### 9.881.1.5 imageInformationRect()

```
QRect Digikam::ItemViewImportDelegate::imageInformationRect ( ) const [virtual]
```

The image information is textual or graphical information, but not the pixmap. The [ratingRect\(\)](#) will e.g. typically be contained in this area.

Reimplemented in [Digikam::ImportDelegate](#).

#### 9.881.1.6 invalidatePaintingCache()

```
void Digikam::ItemViewImportDelegate::invalidatePaintingCache ( ) [protected], [virtual]
```

Reimplemented in [Digikam::ImportDelegate](#).

#### 9.881.1.7 mouseMoved()

```
void Digikam::ItemViewImportDelegate::mouseMoved (
    QMouseEvent * e,
    const QRect & visualRect,
    const QModelIndex & index ) [override], [virtual]
```

##### Note

to be called by [ItemViewCategorized](#) only

Implements [Digikam::DItemDelegate](#).

#### 9.881.1.8 pixmapRect()

```
QRect Digikam::ItemViewImportDelegate::pixmapRect ( ) const [virtual]
```

Reimplemented in [Digikam::ImportDelegate](#).

#### 9.881.1.9 prepareRatingPixmaps()

```
void Digikam::ItemViewImportDelegate::prepareRatingPixmaps (
    bool composeOverBackground = true ) [protected]
```

Please call this method after [prepareBackground\(\)](#) and when `d->ratingPixmap` is set

#### 9.881.1.10 setDefaultViewOptions()

```
void Digikam::ItemViewImportDelegate::setDefaultViewOptions (
    const QStyleOptionViewItem & option ) [override], [virtual]
```

option.rect shall be the viewport rectangle. Call on resize, font change.

Implements [Digikam::DItemDelegate](#).

#### 9.881.1.11 setRatingEdited()

```
void Digikam::ItemViewImportDelegate::setRatingEdited (
    const QModelIndex & index )
```

Call with QModelIndex() afterwards.

#### 9.881.1.12 setSpacing()

```
void Digikam::ItemViewImportDelegate::setSpacing (
    int spacing ) [override], [virtual]
```

Implements [Digikam::DItemDelegate](#).

#### 9.881.1.13 setThumbnailSize()

```
void Digikam::ItemViewImportDelegate::setThumbnailSize (
    const ThumbnailSize & thumbSize ) [override], [virtual]
```

Implements [Digikam::DItemDelegate](#).

## 9.882 Digikam::ItemViewToolTip Class Reference

Inheritance diagram for Digikam::ItemViewToolTip:

### Public Member Functions

- **ItemViewToolTip** (QAbstractItemView \*const view)
- QModelIndex **currentIndex** () const
- QAbstractItemModel \* **model** () const
- void **setTipContents** (const QString &tipContents)
- void **show** (const QStyleOptionViewItem &option, const QModelIndex &index)
  - Show the tooltip for the given item.*
- QString **tipContents** () override
  - Default implementation is based on setTipContents().*
- QAbstractItemView \* **view** () const

### Public Member Functions inherited from Digikam::DItemToolTip

- **DItemToolTip** (QWidget \*const parent=nullptr)

### Protected Member Functions

- bool **eventFilter** (QObject \*o, QEvent \*e) override
- void **hideEvent** (QHideEvent \*) override
- void **mouseMoveEvent** (QMouseEvent \*e) override
- QRect **repositionRect** () override

## Protected Member Functions inherited from [Digikam::DItemToolTip](#)

- bool **event** (QEvent \*) override
- void **paintEvent** (QPaintEvent \*) override
- void **renderArrows** ()
- void **reposition** ()
- void **resizeEvent** (QResizeEvent \*) override
- bool **toolTipsEmpty** () const
- void **updateToolTip** ()

### 9.882.1 Member Function Documentation

#### 9.882.1.1 repositionRect()

```
QRect Digikam::ItemViewToolTip::repositionRect ( ) [override], [protected], [virtual]
```

Implements [Digikam::DItemToolTip](#).

#### 9.882.1.2 show()

```
void Digikam::ItemViewToolTip::show (
    const QStyleOptionViewItem & option,
    const QModelIndex & index )
```

The rect of the given option is taken as area for which the tooltip is shown.

#### 9.882.1.3 tipContents()

```
QString Digikam::ItemViewToolTip::tipContents ( ) [override], [virtual]
```

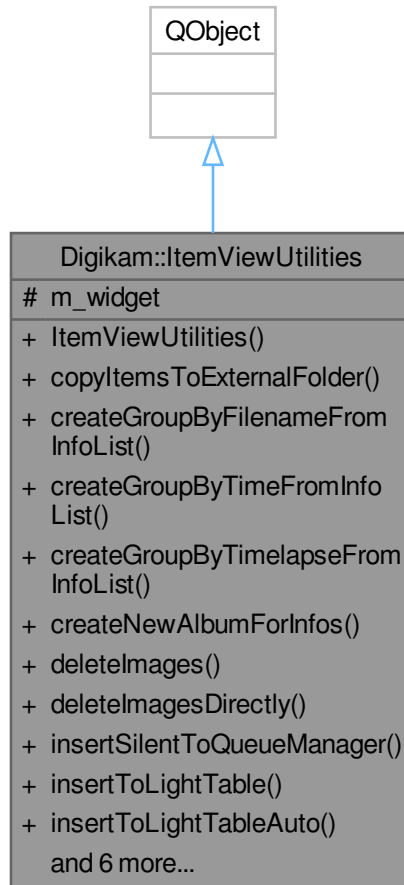

Reimplement if you dynamically provide the contents.

Implements [Digikam::DItemToolTip](#).

## 9.883 Digikam::ItemViewUtilities Class Reference

Inheritance diagram for Digikam::ItemViewUtilities:

### Public Types

- enum `DeleteMode` { `DeletePermanently` = 1 , `DeleteUseTrash` = 2 }

### Public Slots

- void `copyItemsToExternalFolder` (const QList< [ItemInfo](#) > &infos)
- void `createGroupByFilenameFromInfoList` (const [ItemInfoList](#) &itemInfoList)
- void `createGroupByTimeFromInfoList` (const [ItemInfoList](#) &itemInfoList)
- void `createGroupByTimelapseFromInfoList` (const [ItemInfoList](#) &itemInfoList)
- void `createNewAlbumForInfos` (const QList< [ItemInfo](#) > &infos, [Album](#) \*currentAlbum)
- bool `deleteImages` (const QList< [ItemInfo](#) > &infos, const DeleteMode deleteMode)
- void `deleteImagesDirectly` (const QList< [ItemInfo](#) > &infos, const DeleteMode deleteMode)
- void `insertSilentToQueueManager` (const QList< [ItemInfo](#) > &list, const [ItemInfo](#) &currentInfo, int queueid)

- void **insertToLightTable** (const QList< [ItemInfo](#) > &list, const [ItemInfo](#) &current, bool addTo)
- void **insertToLightTableAuto** (const QList< [ItemInfo](#) > &all, const QList< [ItemInfo](#) > &selected, const [ItemInfo](#) &current)
- void **insertToQueueManager** (const QList< [ItemInfo](#) > &list, const [ItemInfo](#) &currentInfo, bool newQueue)
- void **notifyFileContentChanged** (const QList< QUrl > &urls)
- void **openInfos** (const [ItemInfo](#) &info, const QList< [ItemInfo](#) > &allInfosToOpen, [Album](#) \*currentAlbum)
- void **openInfosWithDefaultApplication** (const QList< [ItemInfo](#) > &allInfosToOpen)
- void **rename** (const QUrl &imageUrl, const QString &newName, bool overwrite=false)
- void **setAsAlbumThumbnail** ([Album](#) \*album, const [ItemInfo](#) &itemInfo)

### Signals

- void **editorCurrentUrlChanged** (const QUrl &url)

### Public Member Functions

- **ItemViewUtilities** (QWidget \*const parentWidget)

### Protected Attributes

- QWidget \* **m\_widget** = nullptr

## 9.884 Digikam::ItemVisibilityController Class Reference

Inheritance diagram for Digikam::ItemVisibilityController:

### Public Types

- enum `IncludeFadingOutMode` { `IncludeFadingOut` , `ExcludeFadingOut` }
- enum `State` { `Hidden` , `FadingIn` , `Visible` , `FadingOut` }

*This class handles complex visibility situations for items.*

## Public Slots

- void **hide** ()
- void **hideAndRemoveItem** (QObject \*item)
  - Hide the item, and then remove it.*
- void **hideItem** (QObject \*item)
- void **setDirectlyVisible** (bool visible)
- void **setItemDirectlyVisible** (QObject \*item, bool visible)
- void **setItemThatShallBeShown** (QObject \*item)
  - Sets a single item to be shown.*
- void **setItemVisible** (QObject \*item, bool visible)
- void **setShallBeShown** (bool shallBeShown)
  - Adjusts the first condition - the items are shown if shallBeShown is true and isVisible is true.*
- void **setShallBeShownDirectly** (bool shallBeShown)
- void **setVisible** (bool visible)
- void **show** ()
  - Adjusts the main condition.*
- void **showItem** (QObject \*item)
  - Shows or hides a single item.*

## Signals

- void **hiddenAndRemoved** (QObject \*item)
  - Emitted when hideAndRemoveItem has finished.*
- void **propertiesAssigned** (bool visible)
  - Emitted when the (main) transition has finished.*
- void **propertiesAssigned** (QObject \*item, bool visible)
  - Emitted when a transition for a single item finished (see setItemVisible())*

## Public Member Functions

- **ItemVisibilityController** (QObject \*const parent=nullptr)
- void **addItem** (QObject \*const object)
  - Add and remove objects.*
- void **clear** ()
  - Remove all animations.*
- bool **hasVisibleItems** (**IncludeFadingOutMode** mode=**IncludeFadingOut**) const
  - This returns the "result" of isVisible and shallBeShown: Something is indeed visible on the scene.*
- bool **isVisible** () const
- QList< QObject \* > **items** () const
  - Returns all items under control.*
- void **removeItem** (QObject \*const object)
- void **setAnimationDuration** (int msec)
- void **setEasingCurve** (const QEasingCurve &easing)
  - Allows to change the default parameters of all animations.*
- bool **shallBeShown** () const
- **State state** () const
- QList< QObject \* > **visibleItems** (**IncludeFadingOutMode** mode=**IncludeFadingOut**) const
  - Returns all currently visible items.*

## Protected Slots

- void **animationFinished** ()
- void **objectDestroyed** (QObject \*)

## Protected Member Functions

- virtual QPropertyAnimation \* **createAnimation** (QObject \*item)  
*Creates the animation for showing and hiding the given item.*

## Properties

- bool **shallBeShown**
- bool **visible**

## 9.884.1 Member Enumeration Documentation

### 9.884.1.1 IncludeFadingOutMode

```
enum Digikam::ItemVisibilityController::IncludeFadingOutMode
```

#### Enumerator

IncludeFadingOut	In addition to items visible or fading in, return those fading out.
ExcludeFadingOut	Do not return those items currently fading out (soon to be hidden)

### 9.884.1.2 State

```
enum Digikam::ItemVisibilityController::State
```

There is a 3-tiered approach: 1) shallBeShown determines if the items shall at any time be shown. If it is false, items will never be shown. Default is true, so you can ignore this setting. 2) visible determines if the items shall be shown now. Only takes effect if shallBeShown is true. Default is false: Initially, controlled items are hidden. 3) Opacity and individual item visibility: When showing, items are first set to individually visible, then their opacity is increased from 0 to 1. When hiding, opacity is first decreased from 1 to 0, then they are set individually to hidden. Different types of items can be handled:

- a group of items with an "opacity" and "visible" property
- a single item with an "opacity" and "visible" property
- a proxy object with these properties (see above)

## 9.884.2 Member Function Documentation

### 9.884.2.1 addItem()

```
void Digikam::ItemVisibilityController::addItem (
    QObject *const object )
```

The given objects shall provide an "opacity" and a "visible" property. You can, for convenience, use a [ItemVisibilityControllerPropertyObject](#) as a value container, if your items do not provide these properties directly. No ownership is taken, so the objects should live as long as this object is used.

#### 9.884.2.2 createAnimation()

```
QPropertyAnimation * Digikam::ItemVisibilityController::createAnimation (
    QObject * item ) [protected], [virtual]
```

The item is given for information only, you do not need to use it. The default implementation creates an animation for "opacity" from 0.0 to 1.0, using default easing curve and duration, which can and will be changed by [setEasingCurve](#) and [setAnimationDuration](#).

#### 9.884.2.3 hasVisibleItems()

```
bool Digikam::ItemVisibilityController::hasVisibleItems (
    IncludeFadingOutMode mode = IncludeFadingOut ) const
```

Also returns false if no items are available.

#### 9.884.2.4 hideAndRemoveItem

```
void Digikam::ItemVisibilityController::hideAndRemoveItem (
    QObject * item ) [slot]
```

When finished, [hiddenAndRemoved\(\)](#) is emitted.

#### 9.884.2.5 setItemThatShallBeShown

```
void Digikam::ItemVisibilityController::setItemThatShallBeShown (
    QObject * item ) [slot]
```

Calling [setVisible\(\)](#) will effectively effect only this single item, as if calling [setItemVisible\(\)](#). Reset by calling with 0 or [setShallBeShown\(\)](#).

#### 9.884.2.6 show

```
void Digikam::ItemVisibilityController::show ( ) [slot]
```

All items are affected. If any items were shown or hidden separately, they will be resynchronized. "Directly" means no animation is employed.

#### 9.884.2.7 showItem

```
void Digikam::ItemVisibilityController::showItem (
    QObject * item ) [slot]
```

The item's status is changed individually. The next call to the "global" method will take precedence again. "Directly" means no animation is employed.

## 9.885 Digikam::ItemVisibilityControllerPropertyObject Class Reference

Inheritance diagram for Digikam::ItemVisibilityControllerPropertyObject:

### Signals

- void **opacityChanged** ()
- void **visibleChanged** ()

## Public Member Functions

- [ItemVisibilityControllerPropertyObject](#) (QObject \*const parent=nullptr)  
*You can use this object as a container providing the properties set by [ItemVisibilityController](#).*
- bool **isVisible** () const
- qreal **opacity** () const
- void **setOpacity** (qreal opacity)
- void **setVisible** (bool visible)

## Protected Attributes

- qreal **m\_opacity** = 0.0
- bool **m\_visible** = false

## Properties

- qreal **opacity**
- bool **visible**

## 9.885.1 Constructor & Destructor Documentation

### 9.885.1.1 ItemVisibilityControllerPropertyObject()

```
Digikam::ItemVisibilityControllerPropertyObject::ItemVisibilityControllerPropertyObject (
    QObject *const parent = nullptr ) [explicit]
```

Connect to the signals accordingly, e.g. to trigger a repaint.

## 9.886 Digikam::JPEGUtils::digikam\_source\_mgr Struct Reference

### Public Attributes

- JOCTET **eoI** [2]
- struct jpeg\_source\_mgr **pub**

## 9.887 Digikam::JPEGUtils::JpegRotator Class Reference

### Public Member Functions

- [JpegRotator](#) (const QString &file)  
*Create a [JpegRotator](#) reading from the given file.*
- [~JpegRotator](#) ()  
*Destructor.*
- bool [autoExifTransform](#) ()  
*Rotate the JPEG file's content according to the current orientation, resetting the current orientation to normal.*
- bool [exifTransform](#) (const [MetaEngineRotation](#) &matrix)  
*Rotate the given image by the given [Matrix](#).*
- bool [exifTransform](#) ([TransformAction](#) action)  
*Rotate the given image by the given [TransformAction](#).*
- void [setCurrentOrientation](#) ([MetaEngine::ImageOrientation](#) orientation)  
*Per default, the orientation is read from the metadata of the file.*
- void [setDestinationFile](#) (const QString &dest)  
*Set the destination file.*
- void [setDocumentName](#) (const QString &documentName)  
*Set the Exif document name of the destination file.*

## Protected Member Functions

- bool **performJpegTransform** ([TransformAction](#) action, const QString &src, const QString &dest)
- void **updateMetadata** (const QString &fileName, const [MetaEngineRotation](#) &matrix)

## Protected Attributes

- QString **m\_destFile**
- QString **m\_documentName**
- QString **m\_file**
- [DMetadata](#) \* **m\_metadata** = nullptr
- [MetaEngine::ImageOrientation](#) **m\_orientation** = MetaEngine::ORIENTATION\_UNSPECIFIED
- QSize **m\_originalSize**

## 9.887.1 Constructor & Destructor Documentation

### 9.887.1.1 JpegRotator()

```
Digikam::JPEGUtils::JpegRotator::JpegRotator (
    const QString & file ) [explicit]
```

Per default, it will replace the file, read the current orientation from the metadata, and use the src file name as documentName.

## 9.887.2 Member Function Documentation

### 9.887.2.1 autoExifTransform()

```
bool Digikam::JPEGUtils::JpegRotator::autoExifTransform ( )
```

The final result of loading the image does not change.

### 9.887.2.2 exifTransform() [1/2]

```
bool Digikam::JPEGUtils::JpegRotator::exifTransform (
    const MetaEngineRotation & matrix )
```

The matrix describes the final transformation, it is not adjusted by current rotation.

### 9.887.2.3 exifTransform() [2/2]

```
bool Digikam::JPEGUtils::JpegRotator::exifTransform (
    TransformAction action )
```

The current orientation will be taken into account

#### 9.887.2.4 setCurrentOrientation()

```
void Digikam::JPEGUtils::JpegRotator::setCurrentOrientation (
    MetaEngine::ImageOrientation orientation )
```

You can override this value

#### 9.887.2.5 setDestinationFile()

```
void Digikam::JPEGUtils::JpegRotator::setDestinationFile (
    const QString & dest )
```

By default, the source file will be overwritten by atomic operation if the operation had succeeded.

#### 9.887.2.6 setDocumentName()

```
void Digikam::JPEGUtils::JpegRotator::setDocumentName (
    const QString & documentName )
```

Default value is the source's file name

## 9.888 Digikam::KNodeBase Class Reference

Inheritance diagram for Digikam::KNodeBase:

### Classes

- struct [NodeCompareResult](#)

### Public Member Functions

- **KNodeBase** (const cv::Mat &nodePos, const int identity, int splitAxis, int dimension)
- double **getClosestNeighbors** (QMap< double, QVector< int > > &neighborList, const cv::Mat &position, float sqRange, float cosThreshold, int maxNbNeighbors) const  
*Return a list of closest neighbors, limited by maxNbNeighbors and sqRange.*
- int **getDimension** ()

## 9.891.1 Member Function Documentation

### 9.891.1.1 createNode()

```
KDNNodeBase * Digikam::KDNNodeSFace::createNode (
    const cv::Mat & nodePos,
    const int identity,
    int splitAxis,
    int dimension ) [override], [protected], [virtual]
```

Implements [Digikam::KDNNodeBase](#).

### 9.891.1.2 nodeCompare()

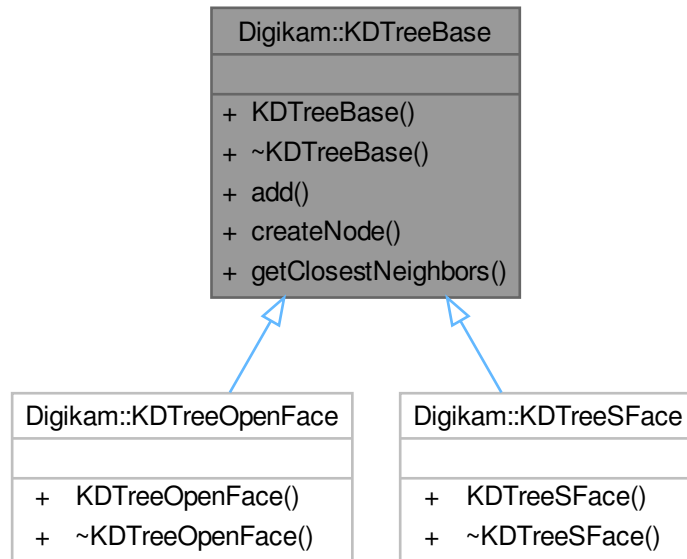

```
KDNNodeBase::NodeCompareResult Digikam::KDNNodeSFace::nodeCompare (
    const cv::Mat & queryPosition,
    const cv::Mat & currentPosition,
    float sqRange,
    float cosThreshold,
    int nbDimension ) const [override], [protected], [virtual]
```

Implements [Digikam::KDNNodeBase](#).

## 9.892 Digikam::KdTreeBase Class Reference

Inheritance diagram for Digikam::KdTreeBase:

### Public Member Functions

- [KdTreeBase](#) (int dim, int kdTreeThreshold=KDTREE\_MAP\_THRESHOLD)  
*Constructor of the class implementing the KD-Tree for vector space partitioning.*
- virtual [KdNodeBase](#) \* [add](#) (const cv::Mat &position, const int identity)  
*add new node to KD-Tree*
- virtual [KdNodeBase](#) \* [createNode](#) (const cv::Mat &nodePos, const int identity, int splitAxis, int dimension)=0  
*create a new node*
- virtual QMap< double, QVector< int > > [getClosestNeighbors](#) (const cv::Mat &position, float sqRange, int maxNbNeighbors) const

### 9.892.1 Constructor & Destructor Documentation

#### 9.892.1.1 KdTreeBase()

```

Digikam::KdTreeBase::KdTreeBase (
    int dim,
    int kdTreeThreshold = KDTREE_MAP_THRESHOLD ) [explicit]
  
```

#### Parameters

<i>dim</i>	The dimension of the tree.
<i>kdTreeThreshold</i>	The KD-Tree threshold. Above this value, we start using the KD-Tree instead of the vector. If the vector grows to default KDTREE_MAP_THRESHOLD items, start using the KDTree.

**Note**

Due to sparse data density in the tree, we initially use a vector of nodes to compare the target to the samples once we have achieved a suitable data density we delete the vector (but not the nodes) and begin using the tree.

Using this to compare brute force vs kdtree performance due to sparse data in k-dimensions (128 dimensions for face features).

**9.892.2 Member Function Documentation****9.892.2.1 add()**

```
KDNodeBase * Digikam::KDTreeBase::add (
    const cv::Mat & position,
    const int identity ) [virtual]
```

**Parameters**

<i>position</i>	K-dimension vector
<i>identity</i>	identity of this face vector

**Returns**

the KD-Tree node base instance

**9.892.2.2 createNode()**

```
virtual KDNodeBase * Digikam::KDTreeBase::createNode (
    const cv::Mat & nodePos,
    const int identity,
    int splitAxis,
    int dimension ) [pure virtual]
```

**Parameters**

<i>nodePos</i>	extracted face vectors
<i>identity</i>	identity of this face vector
<i>splitAxis</i>	current axis/dimension of the vector
<i>dimension</i>	number of dimensions (usually 128)

**Returns**

the KD-Tree node base instance

**9.892.2.3 getClosestNeighbors()**

```
QMap< double, QVector< int > > Digikam::KDTreeBase::getClosestNeighbors (
    const cv::Mat & position,
```

```
float sqRange,
int maxNbNeighbors ) const [virtual]
```

**Returns**

Map of N-nearest neighbors, sorted by distance

## Protected Member Functions inherited from [Digikam::SearchXmlReader](#)

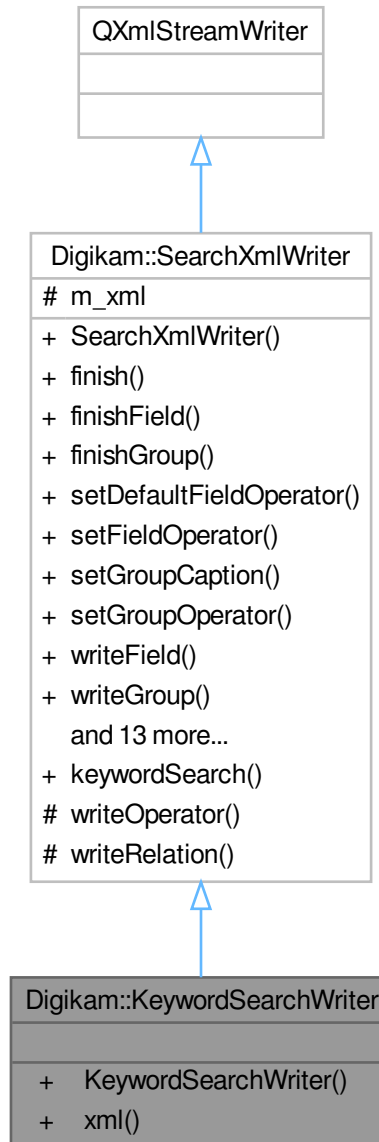

- SearchXml::Operator **readOperator** (const QString &, SearchXml::Operator) const
- SearchXml::Relation **readRelation** (const QString &, SearchXml::Relation) const

## Protected Attributes inherited from [Digikam::SearchXmlReader](#)

- SearchXml::Operator **m\_defaultFieldOperator**

## 9.896 Digikam::KeywordSearchWriter Class Reference

Inheritance diagram for Digikam::KeywordSearchWriter:

### Public Member Functions

- `QString xml (const QStringList &keywordList)`

### Public Member Functions inherited from [Digikam::SearchXmlWriter](#)

- `SearchXmlWriter ()`

Note that [SearchXmlWriter](#) and [SearchXmlGroupWriter](#) rely on you calling the methods following the restrictions set by the documentation; Otherwise you will not produce the desired output.

- void [finish](#) ()  
*Finish the XML.*
- void [finishField](#) ()  
*Finish writing the current field.*
- void [finishGroup](#) ()  
*Finish the current group.*
- void [setDefaultFieldOperator](#) (SearchXml::Operator op)  
*Sets the default operator for fields in this group "(field1 AND field2 AND ... fieldn)".*
- void [setFieldOperator](#) (SearchXml::Operator op)  
*Adds an optional operator overriding the default field operator of the group.*
- void [setGroupCaption](#) (const QString &caption)  
*Sets an optional caption.*
- void [setGroupOperator](#) (SearchXml::Operator op)  
*Sets the operator applied to the group as a whole "OR (field1 ... fieldn)".*
- void [writeField](#) (const QString &name, SearchXml::Relation relation)  
*Adds a new field with the given name (entity) and relation, "Rating less than ...".*
- void [writeGroup](#) ()  
*Adds a group.*
- void [writeValue](#) (const QDateTime &dateTime)
- void [writeValue](#) (const QList< double > &valueList, int precision=8)
- void [writeValue](#) (const QList< float > &valueList, int precision=6)
- void [writeValue](#) (const QList< int > &valueList)
- void [writeValue](#) (const QList< QDateTime > &valueList)
- void [writeValue](#) (const QList< qlonglong > &valueList)
- void [writeValue](#) (const QString &value)  
*Adds the value, "4" in the case of "Rating less than 4".*
- void [writeValue](#) (const QStringList &valueList)
- void [writeValue](#) (double value, int precision=8)
- void [writeValue](#) (float value, int precision=6)
- void [writeValue](#) (int value)
- void [writeValue](#) (qlonglong value)
- QString [xml](#) () const  
*Get the created XML.*

### Additional Inherited Members

### Static Public Member Functions inherited from [Digikam::SearchXmlWriter](#)

- static QString [keywordSearch](#) (const QString &keyword)  
*Returns ready-made XML for a query of type "keyword" with the specified text as keyword.*

### Protected Member Functions inherited from [Digikam::SearchXmlWriter](#)

- void [writeOperator](#) (const QString &, SearchXml::Operator)
- void [writeRelation](#) (const QString &, SearchXml::Relation)

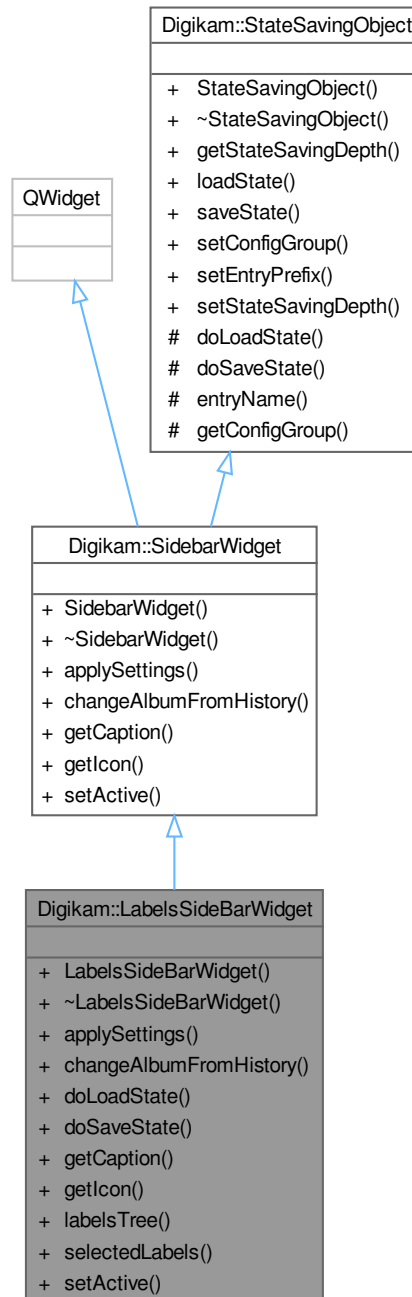

### Protected Attributes inherited from [Digikam::SearchXmlWriter](#)

- QString [m\\_xml](#)

## 9.897 Digikam::LabelsSideBarWidget Class Reference

Inheritance diagram for Digikam::LabelsSideBarWidget:

### Public Member Functions

- **LabelsSideBarWidget** (`QWidget *const parent`)
- void `applySettings()` override

- This method is invoked when the application settings should be (re-) applied to this widget.*

  - void [changeAlbumFromHistory](#) (const QList< Album \* > &album) override
    - This is called on this widget when the history requires to move back to the specified album.*
  - void [doLoadState](#) () override
    - Implement this hook method for state loading.*
  - void [doSaveState](#) () override
    - Implement this hook method for state saving.*
  - const QString [getCaption](#) () override
    - Must be implemented to return the title of this sidebar's tab.*
  - const QIcon [getIcon](#) () override
    - Must be implemented and return the icon that shall be visible for this sidebar widget.*
  - [LabelsTreeView](#) \* [labelsTree](#) ()
  - QHash< LabelsTreeView::Labels, QList< int > > [selectedLabels](#) ()
  - void [setActive](#) (bool active) override
    - This method is called if the visible sidebar widget is changed.*

## Public Member Functions inherited from [Digikam::SidebarWidget](#)

- [SidebarWidget](#) (QWidget \*const parent)
  - Constructor.*
- [~SidebarWidget](#) () override=default
  - Destructor.*

## Public Member Functions inherited from [Digikam::StateSavingObject](#)

- [StateSavingObject](#) (QObject \*const host)
  - Constructor.*
- virtual [~StateSavingObject](#) ()
  - Destructor.*
- [StateSavingDepth](#) [getStateSavingDepth](#) () const
  - Returns the depth used for state saving or loading.*
- void [loadState](#) ()
  - Invokes loading the class' state.*
- void [saveState](#) ()
  - Invokes saving the class' state.*
- virtual void [setConfigGroup](#) (const KConfigGroup &group)
  - Sets a dedicated config group that will be used to store and reload the state from.*
- virtual void [setEntryPrefix](#) (const QString &prefix)
  - Define a prefix that will be used for every entry in the config group.*
- void [setStateSavingDepth](#) (const [StateSavingDepth](#) depth)
  - Sets the depth used for state saving or loading.*

## Additional Inherited Members

## Public Types inherited from [Digikam::StateSavingObject](#)

- enum [StateSavingDepth](#) { [INSTANCE](#) , [DIRECT\\_CHILDREN](#) , [RECURSIVE](#) }
  - This enum defines the "depth" of the [StateSavingObject::loadState\(\)](#) and [StateSavingObject::saveState\(\)](#) methods.*

## Signals inherited from [Digikam::SidebarWidget](#)

- void **requestActiveTab** ([SidebarWidget](#) \*)  
*This signal can be emitted if this sidebar widget wants to be the one that is active.*
- void **signalNotificationError** (const QString &message, int type)  
*To dispatch error message to temporized pop-up notification widget hosted with icon-view.*

## Protected Member Functions inherited from [Digikam::StateSavingObject](#)

- QString **entryName** (const QString &base) const  
*Always use this method to create config group entry names.*
- KConfigGroup **getConfigGroup** () const  
*Returns the config group that must be used for state saving and loading.*

### 9.897.1 Member Function Documentation

#### 9.897.1.1 **applySettings()**

```
void Digikam::LabelsSideBarWidget::applySettings ( ) [override], [virtual]
```

Implements [Digikam::SidebarWidget](#).

#### 9.897.1.2 **changeAlbumFromHistory()**

```
void Digikam::LabelsSideBarWidget::changeAlbumFromHistory (
    const QList< Album * > & album ) [override], [virtual]
```

Implements [Digikam::SidebarWidget](#).

#### 9.897.1.3 **doLoadState()**

```
void Digikam::LabelsSideBarWidget::doLoadState ( ) [override], [virtual]
```

Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

#### 9.897.1.4 **doSaveState()**

```
void Digikam::LabelsSideBarWidget::doSaveState ( ) [override], [virtual]
```

Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 9.897.1.5 `getCaption()`

```
const QString Digikam::LabelsSideBarWidget::getCaption ( ) [override], [virtual]
```

#### Returns

localized title string

Implements [Digikam::SidebarWidget](#).

### 9.897.1.6 `getIcon()`

```
const QIcon Digikam::LabelsSideBarWidget::getIcon ( ) [override], [virtual]
```

#### Returns

pixmap icon

Implements [Digikam::SidebarWidget](#).

### 9.897.1.7 `setActive()`

```
void Digikam::LabelsSideBarWidget::setActive (
    bool active ) [override], [virtual]
```

#### Parameters

<i>active</i>	if true, this widget is the new active widget, if false another widget is active
---------------	--

Implements [Digikam::SidebarWidget](#).

## 9.898 Digikam::LabelsTreeView Class Reference

Inheritance diagram for Digikam::LabelsTreeView:

### Public Types

- enum **Labels** { **Ratings** = 0 , **Picks** , **Colors** }

### Public Types inherited from Digikam::StateSavingObject

- enum **StateSavingDepth** { **INSTANCE** , **DIRECT\_CHILDREN** , **RECURSIVE** }

*This enum defines the "depth" of the [StateSavingObject::loadState\(\)](#) and [StateSavingObject::saveState\(\)](#) methods.*

## Signals

- void **signalSetCurrentAlbum** ()

## Public Member Functions

- **LabelsTreeView** (QWidget \*const parent=nullptr, bool setCheckable=false)
- QPixmap **colorRectPixmap** (const QColor &color) const  
*Creates a 30\*30 rectangular pixmap with specific color.*
- void **doLoadState** () override  
*Loading and saving state function inherited from [StateSavingObject](#).*
- void **doSaveState** () override  
*Implement this hook method for state saving.*
- QPixmap **goldenStarPixmap** (bool fillin=true) const
- bool **isCheckable** () const
- bool **isLoadingState** () const
- void **restoreSelectionFromHistory** (QHash< Labels, QList< int > > neededLabels)  
*Restores the selection state from the [AlbumHistory](#) class.*
- QHash< Labels, QList< int > > **selectedLabels** ()  
*Provide the current selection from the tree-view hierarchy.*
- void **setCurrentAlbum** ()  
*Emits a signal to the search handler to set the Current album from currently selected labels.*

## Public Member Functions inherited from [Digikam::StateSavingObject](#)

- [StateSavingObject](#) (QObject \*const host)  
*Constructor.*
- virtual ~**StateSavingObject** ()  
*Destructor.*
- [StateSavingDepth](#) **getStateSavingDepth** () const  
*Returns the depth used for state saving or loading.*
- void **loadState** ()  
*Invokes loading the class' state.*
- void **saveState** ()  
*Invokes saving the class' state.*
- virtual void **setConfigGroup** (const KConfigGroup &group)  
*Sets a dedicated config group that will be used to store and reload the state from.*
- virtual void **setEntryPrefix** (const QString &prefix)  
*Define a prefix that will be used for every entry in the config group.*
- void **setStateSavingDepth** (const [StateSavingDepth](#) depth)  
*Sets the depth used for state saving or loading.*

## Additional Inherited Members

## Protected Member Functions inherited from [Digikam::StateSavingObject](#)

- QString **entryName** (const QString &base) const  
*Always use this method to create config group entry names.*
- KConfigGroup **getConfigGroup** () const  
*Returns the config group that must be used for state saving and loading.*

## 9.898.1 Member Function Documentation

### 9.898.1.1 colorRectPixmap()

```
QPixmap Digikam::LabelsTreeView::colorRectPixmap (
    const QColor & color ) const
```

#### Parameters

<i>color</i>	wanted to be set
--------------	------------------

#### Returns

pixmap has a rectangle filled with the color

### 9.898.1.2 doLoadState()

```
void Digikam::LabelsTreeView::doLoadState ( ) [override], [virtual]
```

Implements [Digikam::StateSavingObject](#).

### 9.898.1.3 doSaveState()

```
void Digikam::LabelsTreeView::doSaveState ( ) [override], [virtual]
```

Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 9.898.1.4 goldenStarPixmap()

```
QPixmap Digikam::LabelsTreeView::goldenStarPixmap (
    bool fillin = true ) const
```

#### Returns

a QPixmap of a 30\*30 pixels golden star used for rating and widget icon

### 9.898.1.5 isCheckable()

```
bool Digikam::LabelsTreeView::isCheckable ( ) const
```

#### Returns

true if the tree widget is checkable and false if not

### 9.898.1.6 isLoadingState()

```
bool Digikam::LabelsTreeView::isLoadingState ( ) const
```

#### Returns

true if Loading state function is running

### 9.898.1.7 restoreSelectionFromHistory()

```
void Digikam::LabelsTreeView::restoreSelectionFromHistory (
    QHash< Labels, QList< int > > neededLabels )
```

#### Parameters

<i>neededLabels</i>	is a QHash to restore the selection from it, the hash is formatted just like the hash generated from
---------------------	--

#### See also

[selectedLabels\(\)](#)

### 9.898.1.8 selectedLabels()

```
QHash< LabelsTreeView::Labels, QList< int > > Digikam::LabelsTreeView::selectedLabels ( )
```

**Returns**

a QMap with three keys: "Ratings", "Picks", and "Colors", every key dedicated to an int list which holds the rows selected

## 9.899 Digikam::LanguagesList Class Reference

Inheritance diagram for Digikam::LanguagesList:

**Public Slots**

- void **slotSearchTextChanged** (const [SearchTextSettings](#) &settings)

**Signals**

- void **signalSearchResult** (int)

**Public Member Functions**

- **LanguagesList** (QWidget \*const parent)

## 9.900 Digikam::LcmsLock Class Reference

**Public Member Functions**

- **LcmsLock** ()

Obtain an [LcmsLock](#) if you access not clearly thread-safe LittleCMS methods.

## 9.901 Digikam::LensDistortionFilter Class Reference

Inheritance diagram for Digikam::LensDistortionFilter:

### Public Member Functions

- **LensDistortionFilter** (`DImg *const orgImage`, `QObject *const parent=nullptr`, `double main=0.0`, `double edge=0.0`, `double rescale=0.0`, `double brighten=0.0`, `int center_x=0`, `int center_y=0`)

- **LensDistortionFilter** (QObject \*const parent=nullptr)
- **FilterAction filterAction** () override  
*Returns the action description corresponding to currently set options.*
- **QString filterIdentifier** () const override  
*Return the identifier for this filter in the image history.*
- void **readParameters** (const **FilterAction** &action) override

## Public Member Functions inherited from Digikam::DImgThreadedFilter

- **DImgThreadedFilter** (DImg \*const orgImage, QObject \*const parent, const QString &name=QString())  
*Constructs a filter with all arguments (ready to use).*
- **DImgThreadedFilter** (QObject \*const parent=nullptr, const QString &name=QString())  
*Constructs a filter without argument.*
- virtual void **cancelFilter** ()  
*Cancel the threaded computation.*
- const QString & **filterName** ()
- int **filterVersion** () const
- **DImg getTargetImage** ()
- QList< int > **multithreadedSteps** (int stop, int start=0) const  
*This method return a list of steps to process parallelized operation in filter using QtConcurrents API.*
- virtual bool **parametersSuccessfullyRead** () const  
*Optional: error handling for readParameters.*
- virtual QString **readParametersError** (const **FilterAction** &actionThatFailed) const
- void **setFilterName** (const QString &name)
- void **setFilterVersion** (int version)  
*Replaying a filter action: Set the filter version.*
- void **setOriginalImage** (const **DImg** &orgImage)
- void **setupAndStartDirectly** (const **DImg** &orgImage, **DImgThreadedFilter** \*const master, int progress←Begin=0, int progressEnd=100)  
*Initializes the filter for use as a slave and directly starts computation (in-thread)*
- void **setupFilter** (const **DImg** &orgImage)  
*You need to call this and then start filter of you used the constructor not setting an original image.*
- virtual void **startFilter** ()  
*Start the threaded computation.*
- virtual void **startFilterDirectly** ()  
*Start computation of this filter, directly in this thread.*
- virtual QList< int > **supportedVersions** () const

## Public Member Functions inherited from Digikam::DynamicThread

- **DynamicThread** (QObject \*const parent=nullptr)  
*This class extends QRunnable, so you have to reimplement virtual void run().*
- **~DynamicThread** () override  
*The destructor calls stop() and wait(), but if you, in your destructor, delete any data that is accessed by your run() method, you must call stop() and wait() before yourself.*
- bool **isFinished** () const
- bool **isRunning** () const
- QThread::Priority **priority** () const
- void **setEmitSignals** (bool emitThem)
- void **setPriority** (QThread::Priority priority)  
*Sets the priority for this dynamic thread.*
- State **state** () const

### Static Public Member Functions

- static int **CurrentVersion** ()
- static QString **DisplayName** ()
- static QString **FilterIdentifier** ()
- static QList< int > **SupportedVersions** ()

### Additional Inherited Members

### Public Types inherited from [Digikam::DynamicThread](#)

- enum **State** { **Inactive** , **Scheduled** , **Running** , **Deactivating** }

### Public Slots inherited from [Digikam::DynamicThread](#)

- void **start** ()
- void **stop** ()  
*Stop computation, sets the running flag to false.*
- void **wait** ()  
*Waits until the thread finishes.*

### Signals inherited from [Digikam::DImgThreadedFilter](#)

- void **finished** (bool success)  
*Emitted when the computation has completed.*
- void **progress** (int progress)  
*Emitted when progress info from the calculation is available.*
- void **started** ()  
*This signal is emitted when image data is available and the computation has started.*

### Signals inherited from [Digikam::DynamicThread](#)

- void **finished** ()
- void **starting** ()  
*Emitted if emitSignals is enabled.*

## Protected Member Functions inherited from Digikam::DImgThreadedFilter

- [DImgThreadedFilter](#) ([DImgThreadedFilter](#) \*const master, const [DImg](#) &orgImage, const [DImg](#) &destImage, int progressBegin=0, int progressEnd=100, const QString &name=QString())  
*Support for chaining two filters as master and thread.*
- virtual void [cleanupFilter](#) ()  
*Clean up filter data if necessary, called by stopComputation() method.*
- virtual void [initFilter](#) ()  
*Start filter operation before threaded method.*
- void [initMaster](#) ()
- void [initSlave](#) ([DImgThreadedFilter](#) \*const master, int progressBegin=0, int progressEnd=100)  
*Initialize the filter for use as a slave - reroutes progress info to master.*
- virtual int [modulateProgress](#) (int progress)  
*This method modulates the progress value from the 0..100 span to the span of this slave.*
- void [postProgress](#) (int progress)  
*Emit progress info.*
- virtual void [prepareDestImage](#) ()
- void [run](#) () override  
*List of threaded operations by filter.*
- void [setSlave](#) ([DImgThreadedFilter](#) \*const slave)  
*Inform the master that there is currently a slave.*

## Protected Member Functions inherited from Digikam::DynamicThread

- bool [runningFlag](#) () const volatile  
*In you run() method, you shall regularly check for runningFlag() and cleanup and return if false.*
- void [shutDown](#) ()  
*If you are deleting data in your destructor which is accessed from the thread, do one of the following from your destructor to guarantee a safe shutdown: 1) Call this method 2) Call stop() and wait(), knowing that nothing will call start() anymore after this 3) Be sure the thread will never be running at destruction.*
- void [start](#) (QMutexLocker< QMutex > &locker)  
*Doing the same as start(), stop() and wait above, provide it with a locked QMutexLocker on mutex().*
- void [stop](#) (const QMutexLocker< QMutex > &locker)
- QMutex \* [threadMutex](#) () const  
*This is the non-recursive mutex used to protect state variables and waiting in this class.*
- void [wait](#) (QMutexLocker< QMutex > &locker)

## Protected Attributes inherited from Digikam::DImgThreadedFilter

- [DImg](#) [m\\_destImage](#)  
*Output image data.*
- [DImgThreadedFilter](#) \* [m\\_master](#) = nullptr  
*The master of this slave filter.*
- QString [m\\_name](#)  
*Filter name.*
- [DImg](#) [m\\_orgImage](#)  
*Copy of original Image data.*
- int [m\\_progressBegin](#) = 0  
*The progress span that a slave filter uses in the parent filter's progress.*
- int [m\\_progressCurrent](#) = 0  
*To prevent signals bombarding with progress indicator value in postProgress().*
- int [m\\_progressSpan](#) = 0
- [DImgThreadedFilter](#) \* [m\\_slave](#) = nullptr  
*The current slave.*
- int [m\\_version](#) = 1
- bool [m\\_wasCancelled](#) = false

## 9.901.1 Member Function Documentation

### 9.901.1.1 filterAction()

`FilterAction` Digikam::LensDistortionFilter::filterAction ( ) [override], [virtual]

Implements [Digikam::DImgThreadedFilter](#).

### 9.901.1.2 filterIdentifier()

`QString` Digikam::LensDistortionFilter::filterIdentifier ( ) const [inline], [override], [virtual]

Implements [Digikam::DImgThreadedFilter](#).

### 9.901.1.3 readParameters()

```
void Digikam::LensDistortionFilter::readParameters (
    const FilterAction & action ) [override], [virtual]
```

Implements [Digikam::DImgThreadedFilter](#).

## 9.902 Digikam::LensDistortionPixelAccess Class Reference

[LensDistortionPixelAccess](#) class: solving the eternal problem: random, cubic-interpolated, sub-pixel coordinate access to an image.

### Public Member Functions

- `LensDistortionPixelAccess` (`DImg *srcImage`)
- void `pixelAccessGetCubic` (double srcX, double srcY, double brighten, uchar \*dst)

### Protected Member Functions

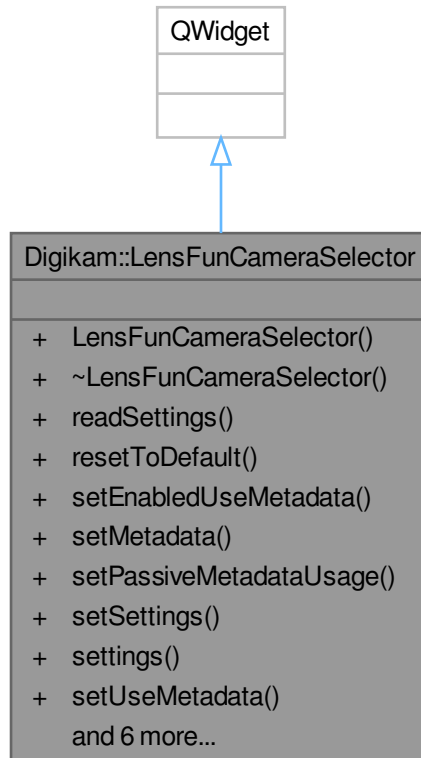

- void `cubicInterpolate` (uchar \*src, int rowStride, uchar \*dst, bool sixteenBit, double dx, double dy, double brighten)
- uchar \* `pixelAccessAddress` (int i, int j)
- void `pixelAccessDoEdge` (int i, int j)
- void `pixelAccessReposition` (int xInt, int yInt)
- void `pixelAccessSelectRegion` (int n)

### 9.902.1 Detailed Description

Assuming that accesses are at least slightly coherent, [LensDistortionPixelAccess](#) keeps `LensDistortionPixelAccessRegions` buffers, each containing a `LensDistortionPixelAccessWidth` x `LensDistortionPixelAccessHeight` region of pixels. `Buffer[0]` is always checked first, so move the last accessed region into that position. When a request arrives which is outside all the regions, get a new region. The new region is placed so that the requested pixel is positioned at [`LensDistortionPixelAccessXOffset`, `LensDistortionPixelAccessYOffset`] in the region.

## 9.903 Digikam::LensFunCameraSelector Class Reference

Inheritance diagram for Digikam::LensFunCameraSelector:

### Public Types

- typedef `QMap< QString, QString >` **Device**

### Signals

- void **signalLensSettingsChanged** ()

### Public Member Functions

- **LensFunCameraSelector** (`QWidget *const parent=nullptr`)
- void **readSettings** (`const KConfigGroup &group`)
- void **resetToDefault** ()
- void **setEnabledUseMetadata** (`bool b`)
- void **setMetadata** (`const MetaEngineData &`)
- void **setPassiveMetadataUsage** (`bool b`)

*Special mode used with BQM which processes multiple items at the same time.*

- void **slotDockLocationChanged** (Qt::DockWidgetArea area)
- void **slotPickLabelChanged** (const QUrl &, int)
- void **slotRatingChanged** (const QUrl &, int)
- void **slotToggleTag** (const QUrl &, int)

### Public Slots inherited from [Digikam::ItemThumbnailBar](#)

- void **assignRating** (const QList< QModelIndex > &index, int rating)
- void **slotDockLocationChanged** (Qt::DockWidgetArea area)

### Public Slots inherited from [Digikam::ItemCategorizedView](#)

- void **hintAt** (const [ItemInfo](#) &info)
 

*Does something to gain attention for info, but not changing current selection.*
- void **openAlbum** (const QList< [Album](#) \* > &album)
- void **setCurrentInfo** (const [ItemInfo](#) &info)
 

*Set as current item the item identified by the imageinfo.*
- void **setCurrentUrl** (const QUrl &url)
 

*Set as current item the item identified by its file url.*
- void **setCurrentUrlWhenAvailable** (const QUrl &url)
 

*Set as current item when it becomes available, the item identified by its file url.*
- void **setCurrentWhenAvailable** (qulonglong imageId)
 

*Scroll the view to the given item when it becomes available.*
- void **setSelectedItemInfos** (const QList< [ItemInfo](#) > &infos)
 

*Set selected items.*
- void **setSelectedUrls** (const QList< QUrl > &urlList)
 

*Set selected items identified by their file urls.*
- void **setThumbnailSize** (int size)

### Public Slots inherited from [Digikam::ItemViewCategorized](#)

- void **copy** () override
- void **cut** () override
- void **hideIndexNotification** ()
- void **paste** () override
- void **showIndexNotification** (const QModelIndex &index, const QString &message)

### Public Slots inherited from [Digikam::DCategorizedView](#)

- void **reset** () override

### Signals

- void **signalClearAll** ()
- void **signalContentChanged** ()
- void **signalDroppedItems** (const QList< [ItemInfo](#) > &)
- void **signalEditItem** (const [ItemInfo](#) &)
- void **signalRemoveItem** (const [ItemInfo](#) &)
- void **signalSetItemOnLeftPanel** (const [ItemInfo](#) &)
- void **signalSetItemOnRightPanel** (const [ItemInfo](#) &)

## Signals inherited from Digikam::ItemCategorizedView

- void **currentChanged** (const [ItemInfo](#) &info)
- void **deselected** (const QList< [ItemInfo](#) > &nowDeselectedInfos)
 

*Emitted when items are deselected. There may be other selected infos left. This signal is not emitted when the model is reset; then only selectionCleared is emitted.*
- void **imageActivated** (const [ItemInfo](#) &info)
 

*Emitted when the given image is activated. Info is never null.*
- void **modelChanged** ()
 

*Emitted when a new model is set.*
- void **selected** (const QList< [ItemInfo](#) > &newSelectedInfos)
 

*Emitted when new items are selected. The parameter includes only the newly selected infos, there may be other already selected infos.*

## Signals inherited from Digikam::ItemViewCategorized

- void **clicked** (const QMouseEvent \*e, const QModelIndex &index)
 

*For overlays: Like the respective parent class signals, but with additional info.*
- void **entered** (const QMouseEvent \*e, const QModelIndex &index)
- void **keyPressed** (QKeyEvent \*e)
 

*Remember you may want to check if the event is accepted or ignored.*
- void **selectionChanged** ()
 

*Emitted when any selection change occurs.*
- void **selectionCleared** ()
 

*Emitted when the selection is completely cleared.*
- void **viewportClicked** (const QMouseEvent \*e)
 

*While [clicked\(\)](#) is emitted with a valid index, this corresponds to clicking on empty space.*
- void **zoomInStep** ()
- void **zoomOutStep** ()

## Public Member Functions

- **LightTableThumbBar** (QWidget \*const parent)
- void **clear** ()
- int **countItems** () const

- virtual void **setThumbnailSize** (const ThumbnailSize &size)
- ThumbnailSize **thumbnailSize** () const
- void **toIndex** (const QUrl &url)
 

*Selects the index as current and scrolls to it.*

## Public Member Functions inherited from Digikam::ItemViewCategorized

- **ItemViewCategorized** (QWidget \*const parent=nullptr)
- void **awayFromSelection** ()
- **DItemDelegate** \* **delegate** () const
- void **invertSelection** ()
- bool **isToolTipEnabled** () const
- int **numberOfSelectedIndexes** () const
- void **scrollTo** (const QModelIndex &index, ScrollHint hint=EnsureVisible) override
- void **scrollToRelaxed** (const QModelIndex &index, ScrollHint hint=EnsureVisible)
  - Like scrollTo, but only scrolls if the index is not visible, regardless of hint.*
- void **setInitialSelectedItem** (bool enabled)
  - Ensure a initial selected item.*
- void **setScrollCurrentToCenter** (bool enabled)
  - Scroll automatically the current index to center of the view.*
- void **setScrollStepGranularity** (int factor)
  - Determine a step size for scrolling: The larger this number, the smaller and more precise is the scrolling.*
- void **setSelectedIndexes** (const QList< QModelIndex > &indexes)
- void **setSpacing** (int spacing)
  - Sets the spacing.*
- void **setToolTipEnabled** (bool enabled)
- void **setUsePointingHandCursor** (bool useCursor)
  - Set if the PointingHand Cursor should be shown over the activation area.*
- void **toFirstIndex** ()
  - Selects the index as current and scrolls to it.*
- void **toIndex** (const QModelIndex &index)
- void **toLastIndex** ()
- void **toNextIndex** ()
- void **toPreviousIndex** ()

## Public Member Functions inherited from Digikam::DCategorizedView

- **DCategorizedView** (QWidget \*const parent=nullptr)
- virtual QModelIndexList **categorizedIndexesIn** (const QRect &rect) const
  - This method will return all indexes whose visual rect intersects rect.*
- virtual QModelIndex **categoryAt** (const QPoint &point) const
  - This method will return the first index of the category in the region of which point is found.*
- **DCategoryDrawer** \* **categoryDrawer** () const
- virtual QItemSelectionRange **categoryRange** (const QModelIndex &index) const
  - This method returns the range of indexes contained in the category in which index is sorted.*
- virtual QRect **categoryVisualRect** (const QModelIndex &index) const
  - This method will return the visual rect of the header of the category in which index is sorted.*
- QModelIndex **indexAt** (const QPoint &point) const override
- void **setCategoryDrawer** (DCategoryDrawer \*categoryDrawer)
- void **setDrawDraggedItems** (bool drawDraggedItems)
  - Switch on drawing of dragged items.*
- void **setGridSize** (const QSize &size)
- void **setModel** (QAbstractItemModel \*model) override
- QRect **visualRect** (const QModelIndex &index) const override

## 9.914.1 Member Function Documentation

### 9.914.1.1 infoIface()

```
DInfoInterface * Digikam::LightTableWindow::infoIface (
    DPluginAction *const ac ) [override], [virtual]
```

Implements [Digikam::DXmlGuiWindow](#).

### 9.914.1.2 loadItemInfos()

```
void Digikam::LightTableWindow::loadItemInfos (
    const ItemInfoList & list,
    const ItemInfo & givenItemInfoCurrent,
    bool addTo )
```

- via CTRL+L (from the albumview) a) digikamapp.cpp: CTRL+key\_L leads to slotImageLightTable() b) digikamview.cpp: void ItemIconView::slotImageLightTable() calls d->iconView->insertToLightTable(list, info); c) albumiconview.cpp: AlbumIconView::insertToLightTable calls lview->loadItemInfos(list, current);
- via drag&drop, i.e. calls issued by the ...Dropped... routines

### 9.914.1.3 slotApplicationSettingsChanged

```
void Digikam::LightTableWindow::slotApplicationSettingsChanged ( ) [slot]
```

## 9.915 Digikam::ListItem Class Reference

Inheritance diagram for Digikam::ListItem:

### Public Member Functions

- `ListItem` (`QList< QVariant > &data`, `ListItem *const parent=nullptr`)
- `QList< ListItem * > allChildren ()` const
- void `appendChild (ListItem *const child)`
- void `appendList (const QList< ListItem * > &items)`
- `ListItem * child (int row)` const
- int `childCount ()` const
- int `columnCount ()` const
- `ListItem * containsItem (ListItem *const item)` const  
*containsItem - search child items if contains a ListItem with the same data as item*
- `QVariant data (int column)` const
- void `deleteChild (int row)`
- void `deleteChild (ListItem *const item)`
- bool `equal (ListItem *const item)` const
- `QList< int > getTagIds ()` const
- `ListItem * parent ()` const
- void `removeAll ()`
- void `removeTagId (int tagId)`
- int `row ()` const
- void `setData (const QList< QVariant > &data)`

## 9.915.1 Member Function Documentation

### 9.915.1.1 containsItem()

```
ListItem * Digikam::ListItem::containsItem (  
    ListItem *const item ) const
```

#### Parameters

<i>item</i>	- <a href="#">ListItem</a> pointer for which we should search if there is a similar item
-------------	--

#### Returns

- NULL if no similar item was found and a valid [ListItem](#) if a [ListItem](#) with the same data was found

## 9.916 Digikam::ListViewComboBox Class Reference

Inheritance diagram for Digikam::ListViewComboBox:

### Public Member Functions

- [ListViewComboBox](#) (QWidget \*parent=nullptr)

*This class provides an implementation of a [StayPoppedUpComboBox](#) with a [QListView](#).*

- virtual void `installView` (QAbstractItemView \*view=nullptr)  
*Replace the standard combo box list view with a QTreeView.*
- QListView \* `view` () const  
*Returns the QTreeView of this class.*

### Public Member Functions inherited from [Digikam::StayPoppedUpComboBox](#)

- [StayPoppedUpComboBox](#) (QWidget \*const parent=nullptr)  
*This class provides an abstract QComboBox with a custom view (which is created by implementing subclasses) instead of the usual QListView.*

### Public Member Functions inherited from [Digikam::ModelIndexBasedComboBox](#)

- [ModelIndexBasedComboBox](#) (QWidget \*const parent=nullptr)  
*QComboBox has a current index based on a single integer.*
- QModelIndex `currentIndex` () const
- void `hidePopup` () override
- void `setCurrentIndex` (const QModelIndex &index)
- void `showPopup` () override

### Protected Member Functions

- void `sendViewportEventToView` (QEvent \*e) override  
*Implement in subclass: Send the given event to the viewportEvent() method of m\_view.*

### Protected Member Functions inherited from [Digikam::StayPoppedUpComboBox](#)

- bool `eventFilter` (QObject \*watched, QEvent \*event) override
- void `installView` (QAbstractItemView \*view)  
*Replace the standard combo box list view with the given view.*

### Additional Inherited Members

### Protected Attributes inherited from [Digikam::StayPoppedUpComboBox](#)

- QAbstractItemView \* `m_view` = nullptr

### Protected Attributes inherited from [Digikam::ModelIndexBasedComboBox](#)

- QPersistentModelIndex `m_currentIndex`

## 9.916.1 Constructor & Destructor Documentation

### 9.916.1.1 ListViewComboBox()

```
Digikam::ListViewComboBox::ListViewComboBox (
    QWidget * parent = nullptr ) [explicit]
```

This is the standard view of a QComboBox, but in conjunction with [StayPoppedUpComboBox](#) some extra steps are needed. You need three steps: Construct the object, call `setModel()` with an appropriate `QAbstractItemModel`, then call `installView()`.

## 9.916.2 Member Function Documentation

### 9.916.2.1 installView()

```
void Digikam::ListViewComboBox::installView (
    QAbstractItemView * view = nullptr ) [virtual]
```

Call this after installing an appropriate model.

Reimplemented in [Digikam::ChoiceSearchComboBox](#).

### 9.916.2.2 sendViewportEventToView()

```
void Digikam::ListViewComboBox::sendViewportEventToView (
    QEvent * e ) [override], [protected], [virtual]
```

This method is protected for a usual `QAbstractItemView`. You can override, pass a view, and call parent implementation. The existing view will be used. You must then also reimplement `sendViewportEventToView`.

Implements [Digikam::StayPoppedUpComboBox](#).

### 9.916.2.3 view()

```
QListView * Digikam::ListViewComboBox::view ( ) const
```

Valid after `installView()` has been called.

## 9.917 Digikam::LoadingCache Class Reference

Inheritance diagram for Digikam::LoadingCache:

### Classes

- class [CacheLock](#)

### Signals

- void [fileChanged](#) (const QString &filePath)  
*This signal is emitted when the cache is notified that a file was changed.*

### Public Member Functions

- void [addLoadingProcess](#) ([LoadingProcess](#) \*const process)  
*Add a loading process to the list.*
- quint64 [getCacheSize](#) () const

*Get the cache size in bytes.*

- bool **hasThumbnailPixmap** (const QString &cacheKey) const
- bool **isCacheable** (const DImg &img) const
 

*Returns whether the given DImg fits in the cache.*
- void **notifyFileChanged** (const QString &filePath, bool notify=true)
 

*Remove all entries from cache that were loaded from filePath.*
- void **notifyNewLoadingProcess** (LoadingProcess \*const process, const LoadingDescription &description)
 

*Notify all currently registered loading processes.*
- bool **putImage** (const QString &cacheKey, const DImg &img, const QString &filePath) const
 

*Put image into for given string into the cache.*
- void **putThumbnail** (const QString &cacheKey, const QImage &thumb, const QString &filePath)
 

*Puts a thumbnail into the thumbnail cache.*
- void **putThumbnail** (const QString &cacheKey, const QPixmap &thumb, const QString &filePath)
- void **removeImage** (const QString &cacheKey)
 

*Remove entries for the given cacheKey from the cache.*
- void **removeImages** ()
 

*Remove all entries from the cache.*
- void **removeLoadingProcess** (LoadingProcess \*const process)
 

*Remove loading process for given cache key.*
- void **removeThumbnail** (const QString &cacheKey)
 

*Remove the thumbnail for the given file path from the thumbnail cache.*
- void **removeThumbnails** ()
 

*Remove all thumbnails.*
- const QPixmap \* **retrieveBufferedTPixmap** (const QString &cacheKey) const
- DImg \* **retrieveImage** (const QString &cacheKey) const
 

*Retrieves an image for the given string from the cache, or 0 if no image is found.*
- LoadingProcess \* **retrieveLoadingProcess** (const QString &cacheKey) const
 

*Find the loading process for given cacheKey, or 0 if not found.*
- const QImage \* **retrieveThumbnail** (const QString &cacheKey) const
 

*The LoadingCache support both the caching of QImage and QPixmap objects.*
- const QPixmap \* **retrieveThumbnailPixmap** (const QString &cacheKey) const
- void **setCacheSize** (int megabytes)
 

*Sets the cache size in megabytes.*
- void **setFileWatch** (LoadingCacheFileWatch \*const watch)
 

*Sets a LoadingCacheFileWatch to watch the files contained in this cache.*
- void **setThumbnailCacheSize** (int numberOfQImages, int numberOfQPixmaps)
 

*Sets the size of the thumbnail cache.*

### Static Public Member Functions

- static LoadingCache \* **cache** ()
- static void **cleanUp** ()

### Friends

- class **CacheLock**
- class **LoadingCacheFileWatch**

## 9.917.1 Member Function Documentation

### 9.917.1.1 addLoadingProcess()

```
void Digikam::LoadingCache::addLoadingProcess (
    LoadingProcess *const process )
```

Only one loading process for the same cache key is registered at a time.

### 9.917.1.2 fileChanged

```
void Digikam::LoadingCache::fileChanged (
    const QString & filePath ) [signal]
```

There is no information in this signal if the file was ever contained in the cache. The signal may be emitted under [CacheLock](#). Strongly consider a queued connection.

### 9.917.1.3 notifyFileChanged()

```
void Digikam::LoadingCache::notifyFileChanged (
    const QString & filePath,
    bool notify = true )
```

Emits relevant signals if notify = true.

### 9.917.1.4 putImage()

```
bool Digikam::LoadingCache::putImage (
    const QString & cacheKey,
    const DImg & img,
    const QString & filePath ) const
```

Returns true if image has been put in the cache, false otherwise. Ownership of the [DImg](#) instance is passed to the cache. When it cannot be put in the cache it is deleted. The third parameter specifies a file path that will be watched. If this file changes, the object will be removed from the cache.

### 9.917.1.5 retrieveThumbnail()

```
const QImage * Digikam::LoadingCache::retrieveThumbnail (
    const QString & cacheKey ) const
```

QPixmap can only be accessed from the main thread, so the tasks cannot access this cache. Retrieves a thumbnail for the given filePath from the thumbnail cache, or a 0 if the thumbnail is not found.

### 9.917.1.6 setCacheSize()

```
void Digikam::LoadingCache::setCacheSize (
    int megabytes )
```

The thumbnail cache is not affected and setThumbnailCacheSize takes the maximum number.

### 9.917.1.7 setFileWatch()

```
void Digikam::LoadingCache::setFileWatch (
    LoadingCacheFileWatch *const watch )
```

Ownership of this object is transferred to the cache.

### 9.917.1.8 setThumbnailCacheSize()

```
void Digikam::LoadingCache::setThumbnailCacheSize (
    int numberOfQImages,
    int numberOfQPixmaps )
```

#### Parameters

<i>numberOfQImages</i>	The maximum number of thumbnails of max possible size in QImage format that will be cached. If the size of the images is smaller, a larger number will be cached.
<i>numberOfQPixmaps</i>	The maximum number of thumbnails of max possible size in QPixmap format that will be cached. If the size of the images is smaller, a larger number will be cached. Note: The main cache is unaffected by this method, and setCacheSize takes megabytes as parameter. Note: A good caching strategy will be to set one of the numbers to 0 Default values: (0, 100)

## 9.918 Digikam::LoadingCache::CacheLock Class Reference

### Public Member Functions

- **CacheLock** ([LoadingCache](#) \*const cache)
- void **timedWait** ()
- void **wakeAll** ()

### 9.918.1 Detailed Description

## Warning

All methods of [LoadingCache](#) shall only be called when a [CacheLock](#) is held

## 9.919 Digikam::LoadingCacheFileWatch Class Reference

Inheritance diagram for Digikam::LoadingCacheFileWatch:

### Public Member Functions

## 9.919.1 Member Function Documentation

### 9.919.1.1 notifyFileChanged()

```
void Digikam::LoadingCacheFileWatch::notifyFileChanged (
    const QString & filePath ) [protected]
```

Call this to tell the cache to remove stored images for filePath from the cache. Calling this method is fast, you do not need to check if the file is contained in the cache. Do not hold the CacheLock when calling this method.

## 9.920 Digikam::LoadingCacheInterface Class Reference

### Static Public Member Functions

- static void **cleanCache** ()  
*remove all images from the cache (e.g.*
- static void **cleanThumbnailCache** ()  
*Remove all thumbnails from the thumbnail cache.*
- static void **cleanUp** ()  
*clean up cache at shutdown*
- static void **connectToSignalFileChanged** (QObject \*const object, const char \*slot)  
*Connect the given object/slot to the signal void fileChanged(const QString& filePath); which is emitted when the cache gains knowledge about a possible change of this file on disk.*
- static void **fileChanged** (const QString &filePath, bool notify=true)  
*Remove an image from the cache because it may have changed on disk.*
- static void **initialize** ()
- static void **putImage** (const QString &filePath, const DImg &img)  
*add a copy of the image to cache*
- static void **setCacheOptions** (int cacheSize)  
*Set cache size in Megabytes.*

## 9.920.1 Member Function Documentation

### 9.920.1.1 cleanCache()

```
void Digikam::LoadingCacheInterface::cleanCache ( ) [static]
```

when loading settings changed) Does not affect thumbnails.

### 9.920.1.2 cleanThumbnailCache()

```
void Digikam::LoadingCacheInterface::cleanThumbnailCache ( ) [static]
```

Does not affect main image cache.

### 9.920.1.3 setCacheOptions()

```
void Digikam::LoadingCacheInterface::setCacheOptions (
    int cacheSize ) [static]
```

Set to 0 to disable caching.

## 9.921 Digikam::LoadingDescription Class Reference

### Classes

- class [PostProcessingParameters](#)
- class [PreviewParameters](#)

### Public Types

- enum [ColorManagementSettings](#) { [NoColorConversion](#) , [ApplyTransform](#) , [ConvertForEditor](#) , [ConvertToSRGB](#) , [ConvertForDisplay](#) , [ConvertForOutput](#) }
- enum [RawDecodingHint](#) { [RawDecodingDefaultSettings](#) , [RawDecodingGlobalSettings](#) , [RawDecodingCustomSettings](#) , [RawDecodingTimeOptimized](#) }

### Public Member Functions

- **LoadingDescription** ()  
*An invalid [LoadingDescription](#).*
- **LoadingDescription** (const QString &filePath, [ColorManagementSettings](#)=NoColorConversion)  
*Use this for full loading of non-raw files.*
- **LoadingDescription** (const QString &filePath, const [DRawDecoding](#) &settings, [RawDecodingHint](#) rawDecodingHint=[RawDecodingCustomSettings](#), [ColorManagementSettings](#)=NoColorConversion)  
*Use this for full loading of raw files.*
- **LoadingDescription** (const QString &filePath, const [PreviewSettings](#) &settings, int size, [ColorManagementSettings](#)=NoColorConversion, [PreviewParameters::PreviewType](#)=[PreviewParameters::PreviewImage](#))  
*For preview and thumbnail jobs: Stores preview max size and Exif rotation.*
- QString **cacheKey** () const  
*Return the cache key for this description.*
- bool **equalsIgnoreReducedVersion** (const [LoadingDescription](#) &other) const  
*Returns whether the other loading task equals this one ignoring parameters used to specify a reduced version.*
- bool **equalsOrBetterThan** (const [LoadingDescription](#) &other) const  
*Returns whether this loading task equals the other one or is superior to it, if the other one is a reduced version.*
- bool **isPreviewImage** () const  
*Returns if this description will load a preview.*
- bool **isReducedVersion** () const  
*Returns whether this description describes a loading operation which loads the image in a reduced version (quality, size etc.)*
- bool **isThumbnail** () const  
*Returns if this description will load a thumbnail.*
- QStringList **lookupCacheKeys** () const  
*Return all possible cache keys, starting with the best choice, for which a result may be found in the cache for this description.*

- bool [needCheckRawDecoding](#) () const  
*For some RAW images, the same cache key is not enough to say it is the correct result.*
- bool **operator!=** (const [LoadingDescription](#) &other) const
- bool **operator==** (const [LoadingDescription](#) &other) const  
*Returns whether the other loading task equals this one.*
- [ThumbnailIdentifier](#) **thumbnailIdentifier** () const  
*If this referenced a thumbnail, recreate the identifier.*

### Static Public Member Functions

- static QStringList **possibleCacheKeys** (const QString &filePath)  
*Returns all possible cacheKeys for the given file path (all cache keys under which the given file could be stored in the cache).*
- static QStringList **possibleThumbnailCacheKeys** (const QString &filePath)

### Public Attributes

- QString **filePath**
- [PostProcessingParameters](#) **postProcessingParameters**
- [PreviewParameters](#) **previewParameters**
- [RawDecodingHint](#) **rawDecodingHint** = [RawDecodingDefaultSettings](#)
- [DRawDecoding](#) **rawDecodingSettings**

## 9.921.1 Member Enumeration Documentation

### 9.921.1.1 ColorManagementSettings

enum [Digikam::LoadingDescription::ColorManagementSettings](#)

#### Enumerator

ApplyTransform	IccData is an <a href="#">IccTransform</a> .
ConvertForDisplay	IccData can be the output profile.
ConvertForOutput	IccData is the output profile.

### 9.921.1.2 RawDecodingHint

enum [Digikam::LoadingDescription::RawDecodingHint](#)

#### Enumerator

RawDecodingDefaultSettings	The raw decoding options passed are taken from default, hardcoded settings.
RawDecodingGlobalSettings	The raw decoding options passed are taken from global settings.
RawDecodingCustomSettings	The raw decoding options may be customly edited by the user.
RawDecodingTimeOptimized	The raw decoding options are hardcoded settings optimized for loading time The halfSizeColorImage and 16bit settings can be adjusted separately.

## 9.921.2 Constructor & Destructor Documentation

### 9.921.2.1 LoadingDescription()

```
Digikam::LoadingDescription::LoadingDescription (
    const QString & filePath,
    const PreviewSettings & settings,
    int size,
    ColorManagementSettings cm = NoColorConversion,
    PreviewParameters::PreviewType type = PreviewParameters::PreviewImage )
```

Raw files / preview jobs: If size is not 0, the embedded preview will be loaded if available. If size is 0, [DImg](#) based loading will be used with default raw decoding settings. You can also adjust raw decoding settings and hint in this case.

## 9.921.3 Member Function Documentation

### 9.921.3.1 lookupCacheKeys()

```
QStringList Digikam::LoadingDescription::lookupCacheKeys ( ) const
```

Included in the list are better quality versions, if this description is reduced.

### 9.921.3.2 needCheckRawDecoding()

```
bool Digikam::LoadingDescription::needCheckRawDecoding ( ) const
```

You must check the raw decoding settings in this case.

## 9.922 Digikam::LoadingDescription::PostProcessingParameters Class Reference

### Public Member Functions

## Public Member Functions inherited from [Digikam::LoadSaveTask](#)

- **LoadSaveTask** ([LoadSaveThread](#) \*const thread)

## Public Member Functions inherited from [Digikam::DImgLoaderObserver](#)

- virtual float [granularity](#) ()  
*Return a relative value which determines the granularity, the frequency with which the [DImgLoaderObserver](#) is checked and progress is posted.*

## Protected Attributes

- [LoadingDescription](#) **m\_loadingDescription**
- volatile LoadingTaskStatus **m\_loadingTaskStatus** = LoadingTaskStatusLoading

## Protected Attributes inherited from [Digikam::LoadSaveTask](#)

- [LoadSaveThread](#) \* **m\_thread** = nullptr

## 9.926.1 Member Function Documentation

### 9.926.1.1 continueQuery()

```
bool Digikam::LoadingTask::continueQuery ( ) [override], [virtual]
```

Implements [Digikam::LoadSaveTask](#).

### 9.926.1.2 execute()

```
void Digikam::LoadingTask::execute ( ) [override], [virtual]
```

Implements [Digikam::LoadSaveTask](#).

### 9.926.1.3 progressInfo()

```
void Digikam::LoadingTask::progressInfo (
    float progress ) [override], [virtual]
```

Implements [Digikam::LoadSaveTask](#).

### 9.926.1.4 type()

```
LoadingTask::TaskType Digikam::LoadingTask::type ( ) [override], [virtual]
```

Implements [Digikam::LoadSaveTask](#).

## 9.927 Digikam::LoadSaveFileInfoProvider Class Reference

Inheritance diagram for Digikam::LoadSaveFileInfoProvider:

## Public Member Functions

- virtual QSize [dimensionsHint](#) (const QString &path)=0  
*Gives a hint at the size of the image.*
- virtual int [orientationHint](#) (const QString &path)=0  
*Gives a hint at the orientation of the image.*

## 9.927.1 Member Function Documentation

### 9.927.1.1 dimensionsHint()

```
virtual QSize Digikam::LoadSaveFileInfoProvider::dimensionsHint (  
    const QString & path ) [pure virtual]
```

This can be used to supersede the Exif information in the file.

Implemented in [Digikam::DatabaseLoadSaveFileInfoProvider](#).

### 9.927.1.2 orientationHint()

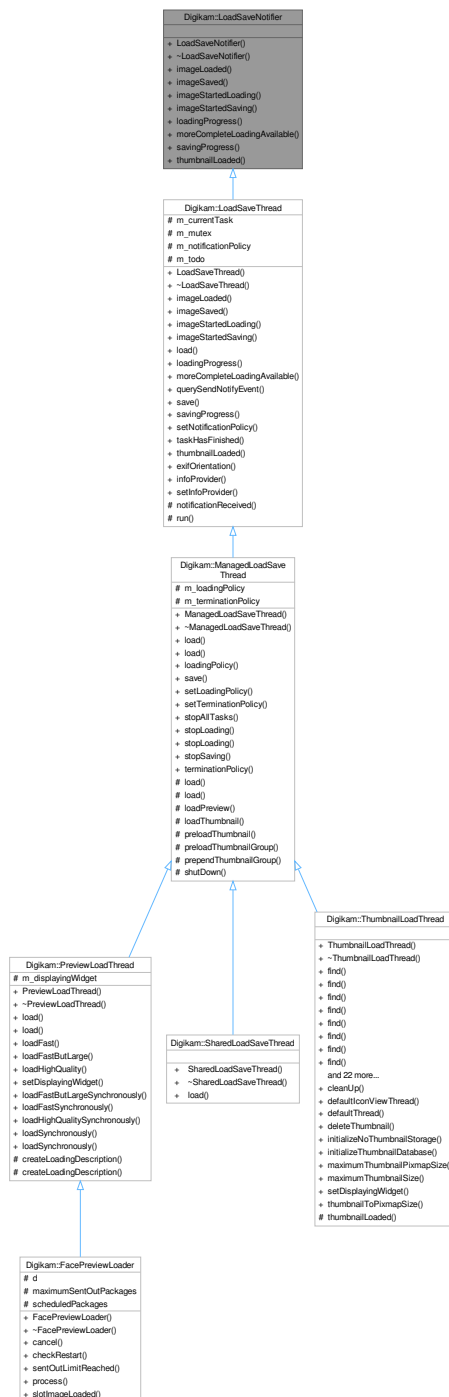

```
virtual int Digikam::LoadSaveFileInfoProvider::orientationHint (  
    const QString & path ) [pure virtual]
```

This can be used to supersede the Exif information in the file. Will not be used if DMetadata::ORIENTATION\_↔ UNSPECIFIED (default value)

Implemented in [Digikam::DatabaseLoadSaveFileInfoProvider](#).

## 9.928 Digikam::LoadSaveNotifier Class Reference

Inheritance diagram for Digikam::LoadSaveNotifier:

### Public Member Functions

- virtual void **imageLoaded** (const [LoadingDescription](#) &loadingDescription, const [DImg](#) &img)=0
- virtual void **imageSaved** (const QString &filePath, bool success)=0

- virtual void **imageStartedLoading** (const [LoadingDescription](#) &loadingDescription)=0
- virtual void **imageStartedSaving** (const QString &filePath)=0

## Public Member Functions inherited from [Digikam::DynamicThread](#)

- [DynamicThread](#) (QObject \*const parent=nullptr)
 

*This class extends QRunnable, so you have to reimplement virtual void [run\(\)](#).*
- [~DynamicThread](#) () override
 

*The destructor calls [stop\(\)](#) and [wait\(\)](#), but if you, in your destructor, delete any data that is accessed by your [run\(\)](#) method, you must call [stop\(\)](#) and [wait\(\)](#) before yourself.*
- bool [isFinished](#) () const
- bool [isRunning](#) () const
- QThread::Priority [priority](#) () const
- void [setEmitSignals](#) (bool emitThem)
- void [setPriority](#) (QThread::Priority priority)
 

*Sets the priority for this dynamic thread.*
- State [state](#) () const

## Static Public Member Functions

- static int [exifOrientation](#) (const QString &filePath, const [DMetadata](#) &metadata, bool isRaw, bool fromRaw↔ EmbeddedPreview)
 

*Retrieves the Exif orientation, either from the info provider if available, or from the metadata.*
- static [LoadSaveFileInfoProvider](#) \* [infoProvider](#) ()
- static void [setInfoProvider](#) ([LoadSaveFileInfoProvider](#) \*const infoProvider)

## Protected Member Functions

- void [notificationReceived](#) ()
- void [run](#) () override
 

*Implement this pure virtual function in your subclass.*

## Protected Member Functions inherited from [Digikam::DynamicThread](#)

- bool [runningFlag](#) () const volatile
 

*In you [run\(\)](#) method, you shall regularly check for [runningFlag\(\)](#) and cleanup and return if false.*
- void [shutDown](#) ()
 

*If you are deleting data in your destructor which is accessed from the thread, do one of the following from your destructor to guarantee a safe shutdown: 1) Call this method 2) Call [stop\(\)](#) and [wait\(\)](#), knowing that nothing will call [start\(\)](#) anymore after this 3) Be sure the thread will never be running at destruction.*
- void [start](#) (QMutexLocker< QMutex > &locker)
 

*Doing the same as [start\(\)](#), [stop\(\)](#) and [wait](#) above, provide it with a locked QMutexLocker on [mutex\(\)](#).*
- void [stop](#) (const QMutexLocker< QMutex > &locker)
- QMutex \* [threadMutex](#) () const
 

*This is the non-recursive mutex used to protect state variables and waiting in this class.*
- void [wait](#) (QMutexLocker< QMutex > &locker)

## Protected Attributes

- [LoadSaveTask](#) \* [m\\_currentTask](#) = nullptr
- QMutex [m\\_mutex](#)
- [NotificationPolicy](#) [m\\_notificationPolicy](#) = [NotificationPolicyTimeLimited](#)
- QList< [LoadSaveTask](#) \* > [m\\_todo](#)

## Additional Inherited Members

## Public Slots inherited from [Digikam::DynamicThread](#)

- void **start** ()
- void **stop** ()
  - Stop computation, sets the running flag to false.*
- void **wait** ()
  - Waits until the thread finishes.*

## 9.930.1 Member Enumeration Documentation

### 9.930.1.1 AccessMode

```
enum Digikam::LoadSaveThread::AccessMode
```

#### Enumerator

AccessModeRead	image will only be used for reading
AccessModeReadWrite	image data will possibly be changed

### 9.930.1.2 NotificationPolicy

```
enum Digikam::LoadSaveThread::NotificationPolicy
```

#### Enumerator

NotificationPolicyDirect	Always send notification, unless the last event is still in the event queue.
NotificationPolicyTimeLimited	Always wait for a certain amount of time after the last event sent. In particular, the first event will be sent only after waiting for this time span. (Or no event will be sent, when the loading has finished before) This is the default.

## 9.930.2 Member Function Documentation

### 9.930.2.1 imageLoaded()

```
void Digikam::LoadSaveThread::imageLoaded (
    const LoadingDescription & loadingDescription,
    const DImg & img ) [override], [virtual]
```

Implements [Digikam::LoadSaveNotifier](#).

### 9.930.2.2 imageSaved()

```
void Digikam::LoadSaveThread::imageSaved (
    const QString & filePath,
    bool success ) [override], [virtual]
```

Implements [Digikam::LoadSaveNotifier](#).

### 9.930.2.3 imageStartedLoading()

```
void Digikam::LoadSaveThread::imageStartedLoading (
    const LoadingDescription & loadingDescription ) [override], [virtual]
```

Implements [Digikam::LoadSaveNotifier](#).

### 9.930.2.4 imageStartedSaving()

```
void Digikam::LoadSaveThread::imageStartedSaving (
    const QString & filePath ) [override], [virtual]
```

Implements [Digikam::LoadSaveNotifier](#).

### 9.930.2.5 loadingProgress()

```
void Digikam::LoadSaveThread::loadingProgress (
    const LoadingDescription & loadingDescription,
    float progress ) [override], [virtual]
```

Implements [Digikam::LoadSaveNotifier](#).

### 9.930.2.6 moreCompleteLoadingAvailable()

```
void Digikam::LoadSaveThread::moreCompleteLoadingAvailable (
    const LoadingDescription & oldLoadingDescription,
    const LoadingDescription & newLoadingDescription ) [override], [virtual]
```

Implements [Digikam::LoadSaveNotifier](#).

### 9.930.2.7 run()

```
void Digikam::LoadSaveThread::run ( ) [override], [protected], [virtual]
```

Implements [Digikam::DynamicThread](#).

### 9.930.2.8 savingProgress()

```
void Digikam::LoadSaveThread::savingProgress (
    const QString & filePath,
    float progress ) [override], [virtual]
```

Implements [Digikam::LoadSaveNotifier](#).

### 9.930.2.9 signalImageLoaded

```
void Digikam::LoadSaveThread::signalImageLoaded (
    const LoadingDescription & loadingDescription,
    const QImage & img ) [signal]
```

If the process failed, img is null.

### 9.930.2.10 signalImageStartedLoading

```
void Digikam::LoadSaveThread::signalImageStartedLoading (
    const LoadingDescription & loadingDescription ) [signal]
```

This thread must use its event loop to get the signals. You must connect to these signals with Qt::AutoConnection (default) or Qt::QueuedConnection. This signal is emitted when the loading process begins.

### 9.930.2.11 signalLoadingProgress

```
void Digikam::LoadSaveThread::signalLoadingProgress (
    const LoadingDescription & loadingDescription,
    float progress ) [signal]
```

No progress info will be sent for preloaded images ([ManagedLoadSaveThread](#)).

### 9.930.2.12 signalMoreCompleteLoadingAvailable

```
void Digikam::LoadSaveThread::signalMoreCompleteLoadingAvailable (
    const LoadingDescription & oldLoadingDescription,
    const LoadingDescription & newLoadingDescription ) [signal]
```

- you are doing shared loading ([SharedLoadSaveThread](#))
- you started a loading operation with a [LoadingDescription](#) for a reduced version of the image
- another thread started a loading operation for a more complete version You may want to cancel the current operation and start with the given loadingDescription

### 9.930.2.13 thumbnailLoaded()

```
void Digikam::LoadSaveThread::thumbnailLoaded (
    const LoadingDescription & loadingDescription,
    const QImage & img ) [override], [virtual]
```

Implements [Digikam::LoadSaveNotifier](#).

Reimplemented in [Digikam::ThumbnailLoadThread](#).

## 9.931 Digikam::LocalContrastContainer Class Reference

### Public Member Functions

- double **getBlur** (int nstage) const
- double **getPower** (int nstage) const

### Public Attributes

### Signals inherited from [Digikam::DImgThreadedFilter](#)

- void **finished** (bool success)  
*Emitted when the computation has completed.*
- void **progress** (int progress)  
*Emitted when progress info from the calculation is available.*
- void **started** ()  
*This signal is emitted when image data is available and the computation has started.*

### Signals inherited from [Digikam::DynamicThread](#)

- void **finished** ()
- void **starting** ()  
*Emitted if emitSignals is enabled.*

## Protected Member Functions inherited from [Digikam::DImgThreadedFilter](#)

- [DImgThreadedFilter](#) ([DImgThreadedFilter](#) \*const master, const [DImg](#) &orgImage, const [DImg](#) &destImage, int progressBegin=0, int progressEnd=100, const QString &name=QString())  
*Support for chaining two filters as master and thread.*
- virtual void [cleanupFilter](#) ()  
*Clean up filter data if necessary, called by stopComputation() method.*
- virtual void [initFilter](#) ()  
*Start filter operation before threaded method.*
- void [initMaster](#) ()
- void [initSlave](#) ([DImgThreadedFilter](#) \*const master, int progressBegin=0, int progressEnd=100)  
*Initialize the filter for use as a slave - reroutes progress info to master.*
- virtual int [modulateProgress](#) (int progress)  
*This method modulates the progress value from the 0..100 span to the span of this slave.*
- void [postProgress](#) (int progress)  
*Emit progress info.*
- virtual void [prepareDestImage](#) ()
- void [run](#) () override  
*List of threaded operations by filter.*
- void [setSlave](#) ([DImgThreadedFilter](#) \*const slave)  
*Inform the master that there is currently a slave.*

## Protected Member Functions inherited from [Digikam::DynamicThread](#)

- bool [runningFlag](#) () const volatile  
*In you run() method, you shall regularly check for runningFlag() and cleanup and return if false.*
- void [shutDown](#) ()  
*If you are deleting data in your destructor which is accessed from the thread, do one of the following from your destructor to guarantee a safe shutdown: 1) Call this method 2) Call stop() and wait(), knowing that nothing will call start() anymore after this 3) Be sure the thread will never be running at destruction.*
- void [start](#) (QMutexLocker< QMutex > &locker)  
*Doing the same as start(), stop() and wait above, provide it with a locked QMutexLocker on mutex().*
- void [stop](#) (const QMutexLocker< QMutex > &locker)
- QMutex \* [threadMutex](#) () const  
*This is the non-recursive mutex used to protect state variables and waiting in this class.*
- void [wait](#) (QMutexLocker< QMutex > &locker)

## Protected Attributes inherited from [Digikam::DImgThreadedFilter](#)

- [DImg](#) [m\\_destImage](#)  
*Output image data.*
- [DImgThreadedFilter](#) \* [m\\_master](#) = nullptr  
*The master of this slave filter.*
- QString [m\\_name](#)  
*Filter name.*
- [DImg](#) [m\\_orgImage](#)  
*Copy of original Image data.*
- int [m\\_progressBegin](#) = 0  
*The progress span that a slave filter uses in the parent filter's progress.*
- int [m\\_progressCurrent](#) = 0  
*To prevent signals bombarding with progress indicator value in postProgress().*
- int [m\\_progressSpan](#) = 0
- [DImgThreadedFilter](#) \* [m\\_slave](#) = nullptr  
*The current slave.*
- int [m\\_version](#) = 1
- bool [m\\_wasCancelled](#) = false

## 9.932.1 Member Function Documentation

### 9.932.1.1 filterAction()

`FilterAction` Digikam::LocalContrastFilter::filterAction ( ) [override], [virtual]

Implements [Digikam::DImgThreadedFilter](#).

### 9.932.1.2 filterIdentifier()

`QString` Digikam::LocalContrastFilter::filterIdentifier ( ) const [inline], [override], [virtual]

Implements [Digikam::DImgThreadedFilter](#).

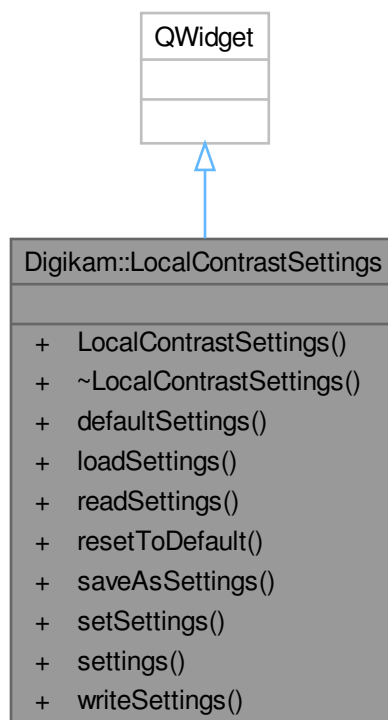

### 9.932.1.3 readParameters()

```
void Digikam::LocalContrastFilter::readParameters (
    const FilterAction & action ) [override], [virtual]
```

Implements [Digikam::DImgThreadedFilter](#).

## 9.933 Digikam::LocalContrastSettings Class Reference

Inheritance diagram for Digikam::LocalContrastSettings:

## Signals

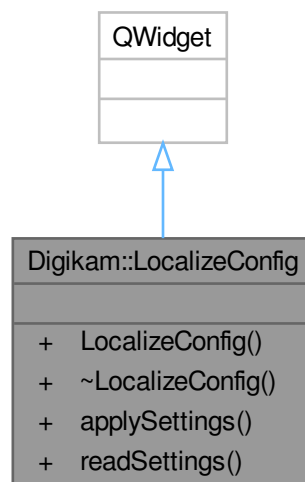

- void **signalSettingsChanged** ()

## Public Member Functions

- **LocalContrastSettings** (QWidget \*const parent)
- [LocalContrastContainer](#) **defaultSettings** () const
- void **loadSettings** ()
- void **readSettings** (KConfigGroup &group)
- void **resetToDefault** ()
- void **saveAsSettings** ()
- void **setSettings** (const [LocalContrastContainer](#) &settings)
- [LocalContrastContainer](#) **settings** () const
- void **writeSettings** (KConfigGroup &group)

## 9.934 Digikam::LocalizeConfig Class Reference

Inheritance diagram for Digikam::LocalizeConfig:

## Public Member Functions

- **LocalizeConfig** (QWidget \*const parent=nullptr)
- void **applySettings** ()
- void **readSettings** ()

## 9.935 Digikam::LocalizeContainer Class Reference

The class [LocalizeContainer](#) encapsulates all spell-check and localize related settings.

### Public Member Functions

- void **readFromConfig** (const KConfigGroup &group)
- void **writeToConfig** (KConfigGroup &group) const

### Public Attributes

- QStringList **alternativeLang**  
*List of langges to use with Alternative Languages Text editor.*
- QString **defaultLanguage**
- bool **enableSpellCheck** = false  
*Enable spell-checking feature.*
- QStringList **ignoredWords**  
*Default language code to use with x-default (empty for auto-detection).*
- [DOnlineTranslator::Engine](#) **translatorEngine** = [DOnlineTranslator::Google](#)  
*Online translator to use.*
- QStringList **translatorLang**  
*List of langues to use with Online translator.*

### 9.935.1 Member Data Documentation

#### 9.935.1.1 ignoredWords

```
QStringList Digikam::LocalizeContainer::ignoredWords
```

Words to ignore with spell-checking.

## 9.936 Digikam::LocalizeSelector Class Reference

Inheritance diagram for Digikam::LocalizeSelector:

### Signals

- void **signalTranslate** (const QString &lang)

### Public Member Functions

- **LocalizeSelector** (QWidget \*const parent)
- void **populateTranslationEntries** ()

## Public Member Functions inherited from Digikam::DHBox

- **DHBox** (QWidget \*const parent=nullptr)
- QSize **minimumSizeHint** () const override
- void **setContentsMargins** (const QMargins &margins)
- void **setContentsMargins** (int left, int top, int right, int bottom)
- void **setSpacing** (int space)
- void **setStretchFactor** (QWidget \*const widget, int stretch)
- QSize **sizeHint** () const override

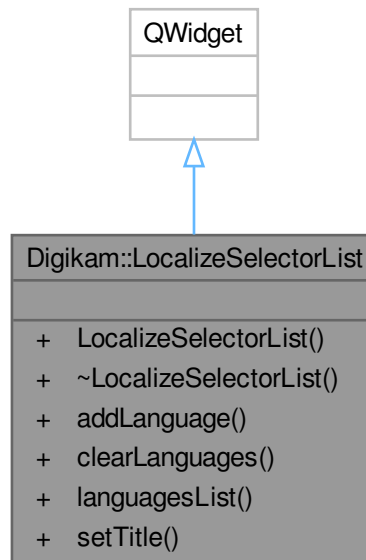

## Additional Inherited Members

## Protected Member Functions inherited from Digikam::DHBox

- **DHBox** (bool vertical, QWidget \*const parent)
- void **childEvent** (QChildEvent \*e) override

## 9.937 Digikam::LocalizeSelectorList Class Reference

Inheritance diagram for Digikam::LocalizeSelectorList:

## Signals

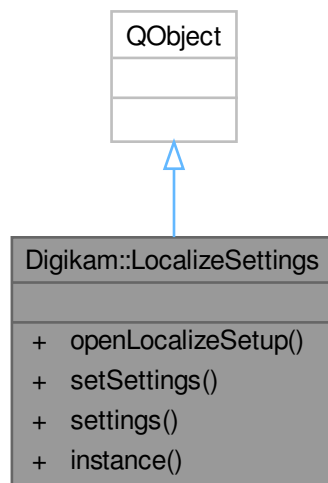

- void **signalSettingsChanged** ()

### Public Member Functions

- **LocalizeSelectorList** (QWidget \*const parent)
- void **addLanguage** (const QString &code)
- void **clearLanguages** ()
- QStringList **languagesList** () const
- void **setTitle** (const QString &title)

## 9.938 Digikam::LocalizeSettings Class Reference

Inheritance diagram for Digikam::LocalizeSettings:

### Public Types

- enum **ConfigPart** { **LocalizeConfig** , **SpellCheckConfig** , **AllConfig** }

### Signals

- void **signalOpenLocalizeSetup** ()
- void **signalSettingsChanged** ()

### Public Member Functions

- void **openLocalizeSetup** ()
- void **setSettings** (const [LocalizeContainer](#) &settings, ConfigPart config)  
*Sets the current Metadata settings and writes them to config.*
- [LocalizeContainer](#) **settings** () const  
*Returns the current Metadata settings.*

### Static Public Member Functions

- static [LocalizeSettings](#) \* [instance](#) ()  
*Global container for spell-check and localize settings.*

### Friends

- class [LocalizeSettingsCreator](#)

## 9.938.1 Member Function Documentation

### 9.938.1.1 [instance\(\)](#)

`LocalizeSettings * Digikam::LocalizeSettings::instance ( ) [static]`

All accessor methods are thread-safe.

## 9.939 Digikam::LookupAltitude Class Reference

Inheritance diagram for Digikam::LookupAltitude:

### Classes

- class [Request](#)

### Public Types

- typedef QFlags< StatusEnum > **StatusAltitude**
- enum **StatusEnum** { **StatusInProgress** = 0 , **StatusSuccess** = 1 , **StatusCanceled** = 2 , **StatusError** = 3 }

### Signals

- void **signalDone** ()
- void **signalRequestsReady** (const QList< int > &readyRequests)

### Public Member Functions

- **LookupAltitude** (QObject \*const parent)
- virtual void **addRequests** (const Request::List &requests)=0
- virtual QString **backendHumanName** () const =0
- virtual QString **backendName** () const =0
- virtual void **cancel** ()=0

## Signals inherited from [Digikam::LookupAltitude](#)

- void **signalDone** ()
- void **signalRequestsReady** (const QList< int > &readyRequests)

## 9.941.1 Member Function Documentation

### 9.941.1.1 backendHumanName()

```
QString Digikam::LookupAltitudeGeonames::backendHumanName ( ) const [override], [virtual]
```

Implements [Digikam::LookupAltitude](#).

### 9.941.1.2 backendName()

```
QString Digikam::LookupAltitudeGeonames::backendName ( ) const [override], [virtual]
```

Implements [Digikam::LookupAltitude](#).

### 9.941.1.3 cancel()

```
void Digikam::LookupAltitudeGeonames::cancel ( ) [override], [virtual]
```

Implements [Digikam::LookupAltitude](#).

#### 9.941.1.4 errorMessage()

```
QString Digikam::LookupAltitudeGeonames::errorMessage ( ) const [override], [virtual]
```

Implements [Digikam::LookupAltitude](#).

#### 9.941.1.5 getRequest()

```
LookupAltitude::Request Digikam::LookupAltitudeGeonames::getRequest (
    const int index ) const [override], [virtual]
```

Implements [Digikam::LookupAltitude](#).

#### 9.941.1.6 getRequests()

```
LookupAltitude::Request::List Digikam::LookupAltitudeGeonames::getRequests ( ) const [override],
[virtual]
```

Implements [Digikam::LookupAltitude](#).

#### 9.941.1.7 getStatus()

```
LookupAltitude::StatusAltitude Digikam::LookupAltitudeGeonames::getStatus ( ) const [override],
[virtual]
```

Implements [Digikam::LookupAltitude](#).

#### 9.941.1.8 startLookup()

```
void Digikam::LookupAltitudeGeonames::startLookup ( ) [override], [virtual]
```

Implements [Digikam::LookupAltitude](#).

## 9.942 Digikam::LookupFactory Class Reference

### Static Public Member Functions

- static [LookupAltitude](#) \* **getAltitudeLookup** (const QString &backendName, QObject \*const parent)

## 9.943 Digikam::MaintenanceData Class Reference

### Public Member Functions

- [Identity](#) `getIdentity ()` const

## 9.946.1 Member Data Documentation

### 9.946.1.1 qualityScanMode

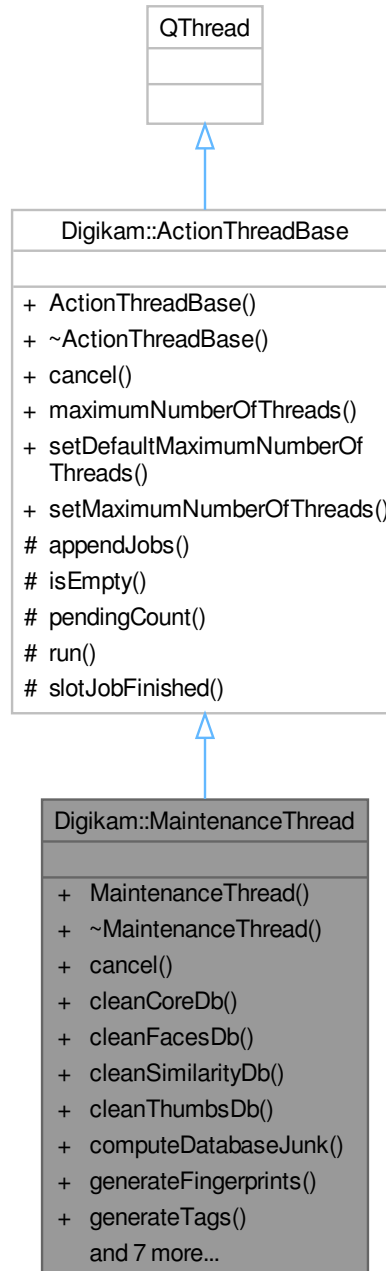

```
int Digikam::MaintenanceSettings::qualityScanMode = ImageQualitySorter::AllItems
```

#### Note

turn all items by default to prevent clearing whole Pick Labels from Collection

## 9.947 Digikam::MaintenanceThread Class Reference

Inheritance diagram for Digikam::MaintenanceThread:

### Signals

- void **signalAddItemsToProcess** (int count)  
*Signal to emit the count of additional items to process.*

- void **signalAdvance** ()
  - Emit when an item was processed and on additional information is necessary.*
- void **signalAdvance** (const [ItemInfo](#) &, const QImage &)
- void **signalAdvance** (const [ItemInfo](#) &, const QImage &, const QStringList &)
- void [signalAdvance](#) (const [ItemInfo](#) &, const QImage &, int)
  - Emit when an item have been processed.*
- void **signalAdvance** (const QImage &)
- void **signalCanceled** ()
  - Signal to emit to sub-tasks to cancel processing.*
- void **signalCompleted** ()
  - Emit when a items list have been fully processed.*
- void **signalData** (const QList< qlonglong > &staleImageIds, const QList< int > &staleThumbIds, const QList< [Identity](#) > &staleIdentities, const QList< qlonglong > &staleSimilarityImageIds)
  - Signal to emit junk data for db cleaner.*
- void **signalFinished** (bool done, bool errorFree)
  - Signal to emit after processing with info if the processing was done and if yes, without errors.*
- void **signalRemovePending** (const [ItemInfo](#) &info)
  - Signal to remove pending item from lazy sync.*
- void **signalStarted** ()
  - Emit when the task has started it's work.*

## Public Member Functions

- **MaintenanceThread** (QObject \*const parent)
- void **cancel** ()
- void **cleanCoreDb** (const QList< qlonglong > &imageIds)
- void **cleanFacesDb** (const QList< [Identity](#) > &staleIdentities)
- void **cleanSimilarityDb** (const QList< qlonglong > &imageIds)
- void **cleanThumbsDb** (const QList< int > &thumbnaillds)

- void **syncMetadata** (const [ItemInfoList](#) &items, MetadataSynchronizer::SyncDirection dir, bool tagsOnly)

## Public Member Functions inherited from [Digikam::ActionThreadBase](#)

- **ActionThreadBase** (QObject \*const parent=nullptr)
- void **cancel** (bool isCancel=true)
  - Cancel processing of current jobs under progress.*
- int **maximumNumberOfThreads** () const
  - Return the maximum number of threads used to parallelize collection of job processing.*
- void [setDefaultMaximumNumberOfThreads](#) ()
  - Reset maximum number of threads used to parallelize collection of job processing to max core detected on computer.*
- void **setMaximumNumberOfThreads** (int n)
  - Adjust maximum number of threads used to parallelize collection of job processing.*

## Additional Inherited Members

### Protected Slots inherited from [Digikam::ActionThreadBase](#)

- void `slotJobFinished ()`

### Protected Member Functions inherited from [Digikam::ActionThreadBase](#)

- void `appendJobs` (const [ActionJobCollection](#) &jobs)  
*Append a collection of jobs to process into QThreadPool.*
- bool `isEmpty ()` const  
*Return true if list of pending jobs to process is empty.*
- int `pendingCount ()` const  
*Return the number of pending jobs to process.*
- void `run ()` override  
*Main thread loop used to process jobs in todo list.*

## 9.947.1 Member Function Documentation

### 9.947.1.1 signalAdvance

```
void Digikam::MaintenanceThread::signalAdvance (
    const ItemInfo & ,
    const QImage & ,
    int ) [signal]
```

[QImage](#) can be used to pass item thumbnail processed.

## 9.948 Digikam::MaintenanceTool Class Reference

Inheritance diagram for [Digikam::MaintenanceTool](#):

## Public Slots

- void `start ()`

## Signals

- void **signalCanceled** ()  
*Emit when process is canceled.*
- void **signalComplete** ()  
*Emit when process is done (not canceled).*

## Signals inherited from [Digikam::ProgressItem](#)

- void [progressItemAdded](#) ([ProgressItem](#) \*item)  
*Emitted when a new [ProgressItem](#) is added.*
- void [progressItemCanceled](#) ([ProgressItem](#) \*item)  
*Emitted when an item was canceled.*
- void **progressItemCanceledById** (const QString &id)
- void [progressItemCompleted](#) ([ProgressItem](#) \*item)  
*Emitted when a progress item was completed.*
- void [progressItemLabel](#) ([ProgressItem](#) \*item, const QString &label)  
*Emitted when the label of an item changed.*
- void [progressItemProgress](#) ([ProgressItem](#) \*item, unsigned int v)  
*Emitted when the progress value of an item changes.*
- void [progressItemStatus](#) ([ProgressItem](#) \*item, const QString &mess)  
*Emitted when the status message of an item changed.*
- void [progressItemThumbnail](#) ([ProgressItem](#) \*item, const QPixmap &thumb)  
*Emitted when the thumbnail data must be set in item.*
- void [progressItemUsesBusyIndicator](#) ([ProgressItem](#) \*item, bool value)  
*Emitted when the busy indicator state of an item changes.*

## Public Member Functions

- **MaintenanceTool** (const QString &id, [ProgressItem](#) \*const parent=nullptr)
- void **setNotificationEnabled** (bool b)  
*If true, show a notification message on desktop notification manager with time elapsed to run process.*
- virtual void [setUseMultiCoreCPU](#) (bool)  
*Re-implement this method if your tool is able to use multi-core CPU to process item in parallel.*

## Public Member Functions inherited from [Digikam::ProgressItem](#)

- **ProgressItem** ([ProgressItem](#) \*const parent, const QString &id, const QString &label, const QString &status, bool [canBeCanceled](#), bool hasThumb)
- void **addChild** ([ProgressItem](#) \*const kiddo)
- bool [advance](#) (unsigned int v)  
*Advance total items processed by n values and update percentage in progressbar.*
- bool [canBeCanceled](#) () const
- void **cancel** ()
- bool **canceled** () const
- unsigned int **completedItems** () const
- bool [hasThumbnail](#) () const
- const QString & [id](#) () const

- const QString & **label** () const
- ProgressItem \* **parent** () const
- unsigned int **progress** () const
- void **removeChild** (ProgressItem \*const kiddo)
- void **reset** ()
  - Reset the progress value of this item to 0 and the status string to the empty string.*
- void **setComplete** ()
  - Tell the item it has finished.*
- bool **setCompletedItems** (unsigned int v)
- void **setLabel** (const QString &v)
- void **setProgress** (unsigned int v)
  - Set the progress (percentage of completion) value of this item.*
- void **setShowAtStart** (bool showAtStart)
  - Set the property to pop-up item when it's added in progress manager.*
- void **setStatus** (const QString &v)
  - Set the string to be used for showing this item's current status.*
- void **setThumbnail** (const QIcon &icon)
  - Sets whether this item has a thumbnail.*
- void **setTotalItems** (unsigned int v)
- void **setUsesBusyIndicator** (bool useBusyIndicator)
  - Sets whether this item uses a busy indicator instead of real progress for its progress bar.*
- bool **showAtStart** () const
- const QString & **status** () const
- bool **totalCompleted** () const
- unsigned int **totalItems** () const
- void **updateProgress** ()
  - Recalculate progress according to total/completed items and update.*
- bool **usesBusyIndicator** () const

### Protected Slots

- virtual void **slotCancel** ()
- virtual void **slotDone** ()
- virtual void **slotStart** ()

## 9.948.1 Member Function Documentation

### 9.948.1.1 setUseMultiCoreCPU()

```
virtual void Digikam::MaintenanceTool::setUseMultiCoreCPU (
    bool ) [inline], [virtual]
```

Reimplemented in [Digikam::AutotagsAssignment](#), [Digikam::DbCleaner](#), [Digikam::FingerPrintsGenerator](#), [Digikam::ImageQualitySorter](#), [Digikam::MetadataRemover](#), [Digikam::MetadataSynchronizer](#), and [Digikam::ThumbsGenerator](#).

### 9.950.1 Member Enumeration Documentation

#### 9.950.1.1 LoadingMode

enum `Digikam::ManagedLoadSaveThread::LoadingMode`

Enumerator

<code>LoadingModeNormal</code>	no sharing of loading process, no caching of image
<code>LoadingModeShared</code>	loading process is shared, image is cached

#### 9.950.1.2 LoadingPolicy

enum `Digikam::ManagedLoadSaveThread::LoadingPolicy`

## Enumerator

LoadingPolicyFirstRemovePrevious	Load image immediately, remove and stop all previous loading tasks.
LoadingPolicyPrepend	Prepend loading in front of all other tasks, but wait for the current task to finish. No other tasks will be removed, preloading tasks will be stopped and postponed.
LoadingPolicySimplePrepend	Prepend in front of all other tasks (not touching the current task). Do not check for duplicate tasks, do not check for preloading tasks.
LoadingPolicyAppend	Append loading task to the end of the list, but in front of all preloading tasks. No other tasks will be removed, preloading tasks will be stopped and postponed. This is similar to the simple <code>load()</code> operation from <a href="#">LoadSaveThread</a> , except for the special care taken for preloading.
LoadingPolicySimpleAppend	Append to the lists of tasks. Do not check for duplicate tasks, do not check for preloading tasks.
LoadingPolicyPreload	Preload image, i.e. load it with low priority when no other tasks are scheduled. All other tasks will take precedence, and preloading tasks will be stopped and postponed when another task is added. No progress info will be sent for preloaded images

## 9.950.1.3 LoadingTaskFilter

```
enum Digikam::ManagedLoadSaveThread::LoadingTaskFilter
```

## Enumerator

LoadingTaskFilterAll	filter all loading tasks
LoadingTaskFilterPreloading	filter only tasks with preloading policy

## 9.950.1.4 TerminationPolicy

```
enum Digikam::ManagedLoadSaveThread::TerminationPolicy
```

## Enumerator

TerminationPolicyTerminateLoading	Wait for saving tasks, stop and remove loading tasks This is the default.
TerminationPolicyTerminatePreloading	Wait for loading and saving tasks, stop and remove preloading tasks.
TerminationPolicyWait	Wait for all pending tasks.
TerminationPolicyTerminateAll	Stop all pending tasks.

## 9.950.2 Member Function Documentation

## 9.950.2.1 load()

```
void Digikam::ManagedLoadSaveThread::load (
    const LoadingDescription & description )
```

If there is already a task for the given file, it will possibly be rescheduled, but no second task will be added. Only loading tasks will - if required by the policy - be stopped or removed, saving tasks will not be touched.

### 9.950.2.2 setLoadingPolicy()

```
void Digikam::ManagedLoadSaveThread::setLoadingPolicy (
    LoadingPolicy policy )
```

Default is LoadingPolicyAppend. You can override the default value for each operation.

### 9.950.2.3 stopLoading()

```
void Digikam::ManagedLoadSaveThread::stopLoading (
    const QString & filePath = QString(),
    LoadingTaskFilter filter = LoadingTaskFilterAll )
```

If filePath isNull, applies to all file paths.

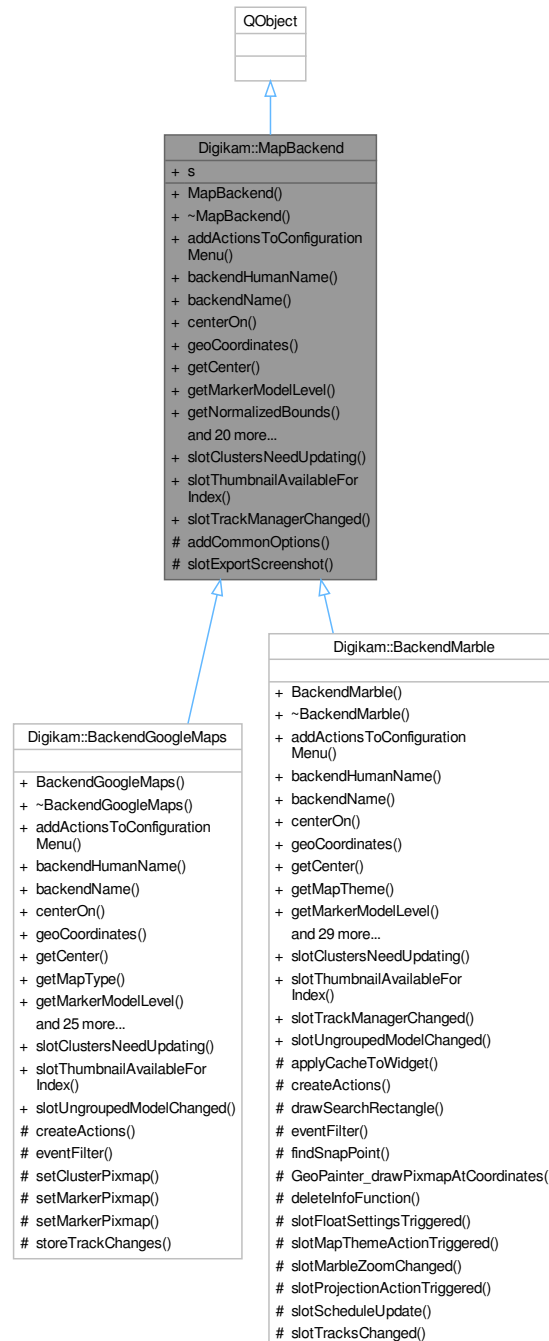

### 9.950.2.4 stopSaving()

```
void Digikam::ManagedLoadSaveThread::stopSaving (
    const QString & filePath = QString() )
```

If filePath isNull, applies to all file paths.

### 9.954.1 Member Function Documentation

#### 9.954.1.1 bestRepresentativeIndexFromList()

```
QPersistentModelIndex Digikam::MapViewModelHelper::bestRepresentativeIndexFromList (
    const QList< QPersistentModelIndex > & list,
    const int sortKey ) [override], [virtual]
```

This is needed to display a thumbnail for a marker group.

## Parameters

<i>list</i>	A list containing markers.
<i>sortKey</i>	Determines the sorting options and is actually of type <code>GPSItemInfoSorter::SortOptions</code>

## Returns

Returns the index of the marker.

Reimplemented from [Digikam::GeoModelHelper](#).

**9.954.1.2 itemCoordinates()**

```
bool Digikam::MapViewModelHelper::itemCoordinates (
    const QModelIndex & index,
    GeoCoordinates *const coordinates ) const [override], [virtual]
```

## Parameters

<i>index</i>	Current model index.
<i>coordinates</i>	Here will be returned the coordinates of the current marker.

## Returns

True, if the marker has coordinates.

Implements [Digikam::GeoModelHelper](#).

**9.954.1.3 model()**

```
QAbstractItemModel * Digikam::MapViewModelHelper::model ( ) const [override], [virtual]
```

## Returns

Returns digiKam's filter model.

Implements [Digikam::GeoModelHelper](#).

**9.954.1.4 onIndicesClicked()**

```
void Digikam::MapViewModelHelper::onIndicesClicked (
    const QList< QPersistentModelIndex > & clickedIndices ) [override], [virtual]
```

## Parameters

<i>clickedIndices</i>	A list containing the marker indices belonging to the group whose thumbnail has been clicked.
-----------------------	---

Reimplemented from [Digikam::GeoModelHelper](#).

### 9.954.1.5 pixmapFromRepresentativeIndex()

```
QPixmap Digikam::MapViewModelHelper::pixmapFromRepresentativeIndex (
    const QPersistentModelIndex & index,
    const QSize & size ) [override], [virtual]
```

#### Parameters

<i>index</i>	The marker's index.
<i>size</i>	The size of the thumbnail.

#### Returns

If the thumbnail has been loaded in the [ThumbnailLoadThread](#) instance, it is returned. If not, a QPixmap is returned and [ThumbnailLoadThread](#)'s signal named `signalThumbnailLoaded` is emitted when the thumbnail becomes available.

Reimplemented from [Digikam::GeoModelHelper](#).

### 9.954.1.6 selectionModel()

```
QItemSelectionModel * Digikam::MapViewModelHelper::selectionModel ( ) const [override], [virtual]
```

#### Returns

Returns digiKam's selection model.

Implements [Digikam::GeoModelHelper](#).

## 9.955.1 Detailed Description

The [MapWidget](#) class is the central widget of geolocation interface. It provides a widget which can display maps using either the Marble or Google Maps backend. Using a model, items can be displayed on the map. For models containing only a small number of items, the items can be shown directly, but for models with a larger number of items, the items can also be grouped. Currently, any number of ungrouped models can be shown, but only one grouped model. Item selection models can also be used along with the models, to interact with the selection states of the items on the map. In order to use a model with geolocation interface, however, a model helper has to be implemented, which extracts data from the model that is not provided by the Qt part of a model's API.

Now, a brief introduction on how to get geolocation interface working is provided:

- First, an instance of [MapWidget](#) has to be created.
- Next, [GeoModelHelper](#) has to be subclassed and at least the pure virtual functions have to be implemented.
- To show the model's data ungrouped, the model helper has to be added to [MapWidget](#) instance using `addUngroupedModel`.
- To show the model's data grouped, an instance of [AbstractMarkerTiler](#) has to be created and the model helper has to be set to it using `setMarkerGeoModelHelper`. The [AbstractMarkerTiler](#) has then to be given to [MapWidget](#) using `setGroupedModel`. If the items to be displayed do not reside in a model, a subclass of [AbstractMarkerTiler](#) can be created which returns just the number of items in a particular area, and picks representative items for thumbnails.
- To handle dropping of items from the host applications UI onto the map, `DragDropHandler` has to be subclassed as well and added to the model using `setDragDropHandler`.
- Finally, `setActive()` has to be called to tell the widget that it should start displaying things.

## 9.955.2 Constructor & Destructor Documentation

### 9.955.2.1 `~MapWidget()`

```
Digikam::MapWidget::~MapWidget ( ) [override]
```

## 9.955.3 Member Function Documentation

### 9.955.3.1 `addUngroupedModel()`

```
void Digikam::MapWidget::addUngroupedModel (
    GeoModelHelper *const modelHelper )
```

### 9.955.3.2 `adjustBoundariesToGroupedMarkers()`

```
void Digikam::MapWidget::adjustBoundariesToGroupedMarkers (
    const bool useSaneZoomLevel = true )
```

Note that a call to this function currently has no effect if the widget has been set inactive via `setActive()` or the backend is not yet ready.

## Parameters

<i>useSaneZoomLevel</i>	Stop zooming at a sane level, if markers are too close together.
-------------------------	--

**9.955.3.3 applyCacheToBackend()**

```
void Digikam::MapWidget::applyCacheToBackend ( ) [protected]
```

**9.955.3.4 convertZoomToBackendZoom()**

```
QString Digikam::MapWidget::convertZoomToBackendZoom (
    const QString & someZoom,
    const QString & targetBackend ) const
```

**9.955.3.5 dragEnterEvent()**

```
void Digikam::MapWidget::dragEnterEvent (
    QDragEnterEvent * event ) [override], [protected]
```

**9.955.3.6 getColorInfos() [1/2]**

```
void Digikam::MapWidget::getColorInfos (
    const GeoGroupState groupState,
    const int nMarkers,
    QColor * fillColor,
    QColor * strokeColor,
    Qt::PenStyle * strokeStyle,
    QString * labelText,
    QColor * labelColor ) const
```

**9.955.3.7 getColorInfos() [2/2]**

```
void Digikam::MapWidget::getColorInfos (
    const int clusterIndex,
    QColor * fillColor,
    QColor * strokeColor,
    Qt::PenStyle * strokeStyle,
    QString * labelText,
    QColor * labelColor,
    const GeoGroupState *const overrideSelection = nullptr,
    const int *const overrideCount = nullptr ) const
```

## Parameters

<i>clusterIndex</i>	Index of the cluster
<i>fillColor</i>	Color used to fill the circle
<i>strokeColor</i>	Color used for the stroke around the circle
<i>strokeStyle</i>	Style used to draw the stroke around the circle
<i>labelText</i>	Text for the label
<i>labelColor</i>	Color for the label text
<i>overrideSelection</i>	Get the colors for a different selection state
<i>overrideCount</i>	Get the colors for a different amount of markers

### 9.955.3.8 getDecoratedPixmapForCluster()

```
QPixmap Digikam::MapWidget::getDecoratedPixmapForCluster (
    const int clusterId,
    const GeoGroupState *const selectedStateOverride,
    const int *const countOverride,
    QPoint *const centerPoint )
```

### 9.955.3.9 removeUngroupedModel()

```
void Digikam::MapWidget::removeUngroupedModel (
    GeoModelHelper *const modelHelper )
```

### 9.955.3.10 setBackend()

```
bool Digikam::MapWidget::setBackend (
    const QString & backendName )
```

### 9.955.3.11 setGroupedModel()

```
void Digikam::MapWidget::setGroupedModel (
    AbstractMarkerTiler *const markerModel )
```

### 9.955.3.12 setSortKey()

```
void Digikam::MapWidget::setSortKey (
    const int sortKey )
```

### 9.955.3.13 setThumbnailSize()

```
void Digikam::MapWidget::setThumbnailSize (
    const int newThumbnailSize )
```

### 9.955.3.14 slotClustersClicked

```
void Digikam::MapWidget::slotClustersClicked (
    const QList & clusterIndices ) [protected], [slot]
```

### 9.955.3.15 slotClustersMoved

```
void Digikam::MapWidget::slotClustersMoved (
    const QList & clusterIndices,
    const QPair< int, QModelIndex > & snapTarget ) [protected], [slot]
```

**9.955.3.16 slotItemDisplaySettingsChanged**

```
void Digikam::MapWidget::slotItemDisplaySettingsChanged ( ) [protected], [slot]
```

**9.955.3.17 slotMouseModeChanged**

```
void Digikam::MapWidget::slotMouseModeChanged (
    QAction * triggeredAction ) [protected], [slot]
```

**9.955.3.18 slotNewSelectionFromMap**

```
void Digikam::MapWidget::slotNewSelectionFromMap (
    const Digikam::GeoCoordinates::Pair & sel ) [protected], [slot]
```

**9.955.3.19 slotUpdateActionsEnabled**

```
void Digikam::MapWidget::slotUpdateActionsEnabled ( ) [slot]
```

**9.955.3.20 updateClusters()**

```
void Digikam::MapWidget::updateClusters ( )
```

**9.956 Digikam::MapWidgetView Class Reference**

Class containing digiKam's central map view.

Inheritance diagram for Digikam::MapView:

## Public Types

- enum **Application** { **ApplicationDigikam** = 1 , **ApplicationImportUI** = 2 }

## Public Types inherited from Digikam::StateSavingObject

- enum **StateSavingDepth** { **INSTANCE** , **DIRECT\_CHILDREN** , **RECURSIVE** }

*This enum defines the "depth" of the [StateSavingObject::loadState\(\)](#) and [StateSavingObject::saveState\(\)](#) methods.*

## Public Member Functions

- [MapWidgetView](#) (QItemSelectionModel \*const selectionModel, [DCategorizedSortFilterProxyModel](#) \*const imageFilterModel, QWidget \*const parent, const Application application)  
*Constructor.*
- [~MapWidgetView](#) () override  
*Destructor.*
- [CamItemInfo currentCamItemInfo](#) () const  
*Returns the [CamItemInfo](#) for the current image.*
- [ItemInfo currentItemInfo](#) () const  
*Returns the [ItemInfo](#) for the current image.*
- bool [getActiveState](#) () const
- void [setActive](#) (const bool state)  
*Set the map active/inactive.*

## Public Member Functions inherited from [Digikam::StateSavingObject](#)

- [StateSavingObject](#) (QObject \*const host)  
*Constructor.*
- virtual [~StateSavingObject](#) ()  
*Destructor.*
- [StateSavingDepth getStateSavingDepth](#) () const  
*Returns the depth used for state saving or loading.*
- void [loadState](#) ()  
*Invokes loading the class' state.*
- void [saveState](#) ()  
*Invokes saving the class' state.*
- virtual void [setConfigGroup](#) (const KConfigGroup &group)  
*Sets a dedicated config group that will be used to store and reload the state from.*
- virtual void [setEntryPrefix](#) (const QString &prefix)  
*Define a prefix that will be used for every entry in the config group.*
- void [setStateSavingDepth](#) (const [StateSavingDepth](#) depth)  
*Sets the depth used for state saving or loading.*

## Protected Member Functions

- void [doLoadState](#) () override  
*Implement this hook method for state loading.*
- void [doSaveState](#) () override  
*Implement this hook method for state saving.*

## Protected Member Functions inherited from [Digikam::StateSavingObject](#)

- QString [entryName](#) (const QString &base) const  
*Always use this method to create config group entry names.*
- KConfigGroup [getConfigGroup](#) () const  
*Returns the config group that must be used for state saving and loading.*

## 9.956.1 Constructor & Destructor Documentation

### 9.956.1.1 MapWidgetView()

```
Digikam::MapWidgetView::MapWidgetView (
    QItemSelectionModel *const selectionModel,
    DategorizedSortFilterProxyModel *const imageFilterModel,
    QWidget *const parent,
    const Application application ) [explicit]
```

#### Parameters

<i>selectionModel</i>	digikam's selection model
<i>imageFilterModel</i>	digikam's filter model
<i>parent</i>	the parent object
<i>application</i>	the type of application host

## 9.956.2 Member Function Documentation

### 9.956.2.1 currentCamItemInfo()

```
CamItemInfo Digikam::MapWidgetView::currentCamItemInfo ( ) const
```

### 9.956.2.2 currentItemInfo()

```
ItemInfo Digikam::MapWidgetView::currentItemInfo ( ) const
```

### 9.956.2.3 doLoadState()

```
void Digikam::MapWidgetView::doLoadState ( ) [override], [protected], [virtual]
```

Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 9.956.2.4 doSaveState()

```
void Digikam::MapWidgetView::doSaveState ( ) [override], [protected], [virtual]
```

Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 9.956.2.5 getActiveState()

```
bool Digikam::MapWidgetView::getActiveState ( ) const
```

#### Returns

The map's active state

### 9.956.2.6 setActive()

```
void Digikam::MapWidgetView::setActive (
    const bool state )
```

## Parameters

<code>state</code>	If true, the map is active.
--------------------	-----------------------------

## 9.957 Digikam::Mat Struct Reference

[Mat](#):

### Public Attributes

- `int cols`  
*Number of columns in the matrix.*
- `double * data`  
*Content of the matrix.*
- `int rows`  
*Number of rows in the matrix.*

### 9.957.1 Detailed Description

Normal matrix type. Indices range from [0, rows - 1 ] and [0, cols - 1].

## 9.958 Digikam::MdKeyListViewItem Class Reference

Inheritance diagram for Digikam::MdKeyListViewItem:

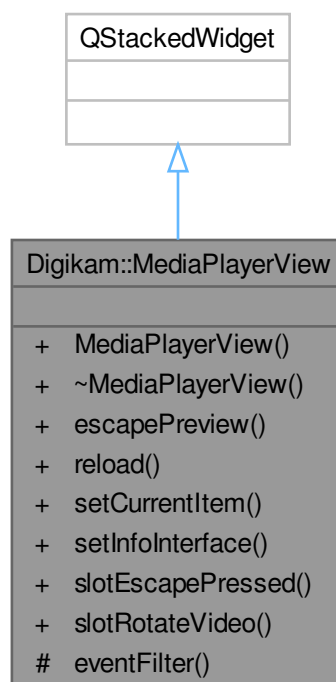

### Public Member Functions

- **MdKeyListViewItem** (QTreeWidget \*const parent, const QString &key)
- QString **getDecryptedKey** () const
- QString **getKey** () const

## 9.959 Digikam::MediaPlayerView Class Reference

Inheritance diagram for Digikam::MediaPlayerView:

### Public Slots

- void **slotEscapePressed** ()
- void **slotRotateVideo** ()

### Signals

- void **signalEscapePreview** ()
- void **signalNextItem** ()
- void **signalPrevItem** ()

**Public Member Functions**

- **MediaPlayerView** (QWidget \*const parent)
- void **escapePreview** ()
- void **reload** ()
- void **setCurrentItem** (const QUrl &url=QUrl(), bool hasPrevious=false, bool hasNext=false)
- void **setInfoInterface** (DInfoInterface \*const iface)

**Protected Member Functions**

- bool **eventFilter** (QObject \*watched, QEvent \*event) override

**9.960 Digikam::MetadataHub Class Reference****Public Types**

- enum **Status** { [MetadataInvalid](#) , [MetadataAvailable](#) }  
*The status enum describes the result of joining several metadata sets.*
- typedef QFlags< WriteComponents > **WriteComponent**
- enum **WriteComponents** {  
  **WRITE\_DATETIME** = 1 , **WRITE\_TITLE** = 2 , **WRITE\_COMMENTS** = 4 , **WRITE\_PICKLABEL** = 8 ,  
  **WRITE\_COLORLABEL** = 16 , **WRITE\_RATING** = 32 , **WRITE\_TEMPLATE** = 64 , **WRITE\_TAGS** = 128 ,  
  **WRITE\_POSITION** = 256 , **WRITE\_ALL** = 511 }
- enum **WriteMode** { [FullWrite](#) , [FullWriteIfChanged](#) , [PartialWrite](#) }

**Public Member Functions**

- **MetadataHub** ()  
*Constructs a [MetadataHub](#).*
- QStringList **cleanupTags** (const QStringList &toClean)  
*cleanupTags remove duplicates and obsolete tags before setting metadata*
- void **load** (const [ItemInfo](#) &info)  
*Add metadata information contained in the [ItemInfo](#) object.*
- void **reset** ()
- bool **willWriteMetadata** (Digikam::MetadataHub::WriteComponent writeMode=WRITE\_ALL, const [MetaEngineSettingsContainer](#) &settings=[MetaEngineSettings::instance\(\)](#) ->settings()) const  
*With the currently applied changes, the given writeMode and settings.*
- bool **write** (const [DImg](#) &image, WriteComponent writeMode=WRITE\_ALL, bool ignoreLazySync=false, const [MetaEngineSettingsContainer](#) &settings=[MetaEngineSettings::instance\(\)](#) ->settings())  
*Constructs a meta engine object from the metadata stored in the given [DImg](#) object, calls the above method, and changes the stored metadata in the [DImg](#) object.*
- bool **write** (const QString &filePath, WriteComponent writeMode=WRITE\_ALL, bool ignoreLazySync=false, const [MetaEngineSettingsContainer](#) &settings=[MetaEngineSettings::instance\(\)](#) ->settings())  
*Constructs a meta engine object for given filePath, calls the above method, writes the changes out to the file, and notifies the [ItemAttributesWatch](#).*
- bool **writeTags** (const [DMetadata](#) &metadata, bool saveTags)  
*Used to deduplicate code from writeTags and usual write, all write to tags operations must be done here.*
- bool **writeTags** (const QString &filePath, WriteComponent writeMode=WRITE\_ALL, const [MetaEngineSettingsContainer](#) &settings=[MetaEngineSettings::instance\(\)](#) ->settings())  
*Will write only Tags to image.*
- void **writeToBaloo** (const QString &filePath, const [MetaEngineSettingsContainer](#) &settings=[MetaEngineSettings::instance\(\)](#) ->settings())  
*write tags, comments and rating to KDE Nepomuk replacement: Baloo*
- bool **writeToMetadata** (const [ItemInfo](#) &info, WriteComponent writeMode=WRITE\_ALL, bool ignoreLazySync=false, const [MetaEngineSettingsContainer](#) &settings=[MetaEngineSettings::instance\(\)](#) ->settings())  
*writeToMetadata write to metadata using image info to retrieve tags and filepath use this method when multiple image infos are loaded in hub*

## Protected Member Functions

- void **applyChangeNotifications** ()
- void **load** (const QDateTime &dateTime, const [CaptionsMap](#) &titles, const [CaptionsMap](#) &comment, int colorLabel, int pickLabel, int rating, const [Template](#) &t)
 

*private common code to load dateTime, comment, color label, pick label, rating*
- void **loadFaceTags** (const [ItemInfo](#) &info)
- void **loadTags** (const QList< int > &loadedTagIds)
 

*private common code to merge tags*
- void **notifyTagDeleted** (int id)
- bool **write** ([DMetadata](#) &metadata, WriteComponent writeMode=WRITE\_ALL, const [MetaEngineSettingsContainer](#) &settings=[MetaEngineSettings::instance\(\)](#) ->settings())
 

*Applies the set of metadata contained in this [MetadataHub](#) to the given meta engine object.*

## 9.960.1 Member Enumeration Documentation

### 9.960.1.1 Status

enum [Digikam::MetadataHub::Status](#)

If only one set has been added, the status is always MetadataAvailable. If no set has been added, the status is always MetadataInvalid

#### Enumerator

MetadataInvalid	not yet filled with any value
MetadataAvailable	only one data set has been added, or a common value is available

### 9.960.1.2 WriteMode

enum [Digikam::MetadataHub::WriteMode](#)

#### Enumerator

FullWrite	Write all available information.
FullWriteIfChanged	Do a full write if and only if. <ul style="list-style-type: none"> <li>• metadata fields changed</li> <li>• the changed fields shall be written according to write settings "Changed" in this context means changed by one of the set... methods, the <a href="#">load()</a> methods are ignored for this attribute. This mode allows to avoid write operations when e.g. the user does not want keywords to be written and only changes keywords.</li> </ul>
PartialWrite	Write only the changed parts. Metadata fields which cannot be changed from <a href="#">MetadataHub</a> (photographer ID etc.) will never be written

## 9.960.2 Member Function Documentation

### 9.960.2.1 cleanupTags()

```
QStringList Digikam::MetadataHub::cleanupTags (
    const QStringList & toClean )
```

#### Parameters

<i>toClean</i>	tag list to be cleared and de-duplicated
----------------	--

#### Returns

clean tag list

### 9.960.2.2 load()

```
void Digikam::MetadataHub::load (
    const ItemInfo & info )
```

This method (or in combination with the other load methods) can be called multiple times on the same [MetadataHub](#) object. In this case, the metadata will be combined.

### 9.960.2.3 willWriteMetadata()

```
bool Digikam::MetadataHub::willWriteMetadata (
    Digikam::MetadataHub::WriteComponent writeMode = WRITE_ALL,
    const MetaEngineSettingsContainer & settings = MetaEngineSettings::instance()->settings()
) const
```

#### Parameters

<i>writeMode</i>	The mode to write metadata
<i>settings</i>	The metadata settings to be set

#### Returns

if write(DMetadata), write(QString) or write(DImg) will actually apply any changes.

### 9.960.2.4 write() [1/3]

```
bool Digikam::MetadataHub::write (
    const DImg & image,
    WriteComponent writeMode = WRITE_ALL,
    bool ignoreLazySync = false,
    const MetaEngineSettingsContainer & settings = MetaEngineSettings::instance()->settings()
)
```

## Parameters

<i>image</i>	The <a href="#">DImg</a> container to retrieve current tags
<i>writeMode</i>	The mode to write metadata
<i>ignoreLazySync</i>	The flag to ignore the lazy sync metadata stage
<i>settings</i>	The metadata settings to be set

## Returns

Returns if the [DImg](#) object has been touched

**9.960.2.5 write()** [2/3]

```
bool Digikam::MetadataHub::write (
    const QString & filePath,
    WriteComponent writeMode = WRITE_ALL,
    bool ignoreLazySync = false,
    const MetaEngineSettingsContainer & settings = MetaEngineSettings::instance()->settings()
)
```

## Parameters

<i>filePath</i>	The file path to retrieve current tags
<i>writeMode</i>	The mode to write metadata
<i>ignoreLazySync</i>	The flag to ignore the lazy sync metadata stage
<i>settings</i>	The metadata settings to be set

## Warning

Do not use this method when multiple image infos are loaded It will result in disjoint tags not being written Use `writeToMetadata(Image info ...)` instead

## Returns

Returns if the file has been touched

**9.960.2.6 write()** [3/3]

```
bool Digikam::MetadataHub::write (
    DMetadata & metadata,
    WriteComponent writeMode = WRITE_ALL,
    const MetaEngineSettingsContainer & settings = MetaEngineSettings::instance()->settings()
) [protected]
```

## Parameters

<i>metadata</i>	The metadata backend instance.
<i>writeMode</i>	The mode to write metadata.

## Parameters

<i>settings</i>	<p>The <a href="#">MetaEngineSettingsContainer</a> determine whether data is actually set or not. The following metadata fields may be set (depending on settings):</p> <ul style="list-style-type: none"> <li>• Comment</li> <li>• Date</li> <li>• Rating</li> <li>• Tags</li> <li>• Photographer ID (data from settings)</li> <li>• Credits (data from settings)</li> </ul>
-----------------	---

## Note

The data fields taken from this [MetadataHub](#) object are only set if their status is `MetadataAvailable`. If the status is `MetadataInvalid` or `MetadataDisjoint`, the respective metadata field is not touched.

## Returns

Returns true if the metadata object has been touched.

**9.960.2.7 writeTags()** [1/2]

```
bool Digikam::MetadataHub::writeTags (
    const DMetadata & metadata,
    bool saveTags )
```

## Parameters

<i>metadata</i>	meta engine object that apply changes
<i>saveTags</i>	save switch

## Returns

if tags were successfully set

**9.960.2.8 writeTags()** [2/2]

```
bool Digikam::MetadataHub::writeTags (
    const QString & filePath,
    WriteComponent writeMode = WRITE_ALL,
    const MetaEngineSettingsContainer & settings = MetaEngineSettings::instance()->settings()
)
```

Used by [TagsManager](#) to write tags to image Other metadata are not updated.

## Parameters

<i>filePath</i>	The file path to update current tags
<i>writeMode</i>	The mode to write metadata
<i>settings</i>	The metadata settings to be set

## Returns

if tags were successfully written.

**9.960.2.9 writeToBaloo()**

```
void Digikam::MetadataHub::writeToBaloo (
    const QString & filePath,
    const MetaEngineSettingsContainer & settings = MetaEngineSettings::instance()->settings()
)
```

## Parameters

<i>filePath</i>	path to file to add comments, tags and rating
<i>settings</i>	metadata settings to be set

**9.960.2.10 writeToMetadata()**

```
bool Digikam::MetadataHub::writeToMetadata (
    const ItemInfo & info,
    WriteComponent writeMode = WRITE_ALL,
    bool ignoreLazySync = false,
    const MetaEngineSettingsContainer & settings = MetaEngineSettings::instance()->settings()
)
```

safe method

## Parameters

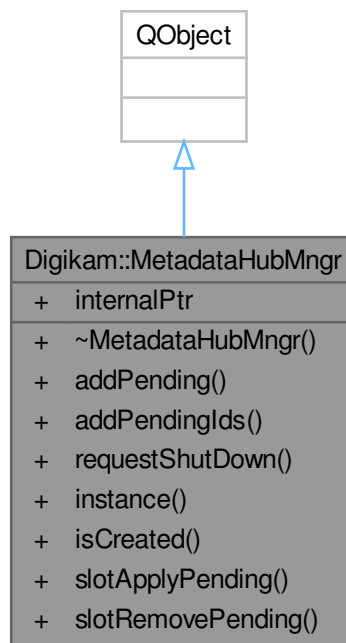

<i>info</i>	The image info to retrieve current tags
<i>writeMode</i>	The mode to write metadata
<i>ignoreLazySync</i>	The flag to ignore the lazy sync metadata stage
<i>settings</i>	The metadata settings to be set

**Returns**

true if everything is successful

## 9.961 Digikam::MetadataHubMngr Class Reference

Inheritance diagram for Digikam::MetadataHubMngr:

**Public Slots**

- void **slotApplyPending** ()
- void **slotRemovePending** (const [ItemInfo](#) &info)

**Signals**

- void **signalPendingMetadata** (int numbers)

**Public Member Functions**

- void **addPending** (const [ItemInfo](#) &info)
- void **addPendingIds** (const QList< qlonglong > &imageIds)
- void **requestShutDown** ()

### Static Public Member Functions

- static [MetadataHubMngr](#) \* **instance** ()
- static bool **isCreated** ()

### Static Public Attributes

## 9.962 Digikam::MetadataKeys Class Reference

Inheritance diagram for Digikam::MetadataKeys:

### Protected Member Functions

- QString `getDbValue` (const QString &key, [ParseSettings](#) &settings) override  
*Abstract method for retrieving the value from the database for the given key.*

### Protected Member Functions inherited from [Digikam::DbKeysCollection](#)

- void `addId` (const QString &id, const QString &description)  
*Add an ID to the key collection.*

## Additional Inherited Members

## Public Member Functions inherited from Digikam::DbKeysCollection

- [DbKeysCollection](#) (const QString &n)  
*Default constructor.*
- QString [collectionName](#) () const  
*Get the name of the DbKeysCollection.*
- QString [getValue](#) (const QString &key, [ParseSettings](#) &settings)  
*Get a value from the database.*
- DbKeyIdsMap [ids](#) () const  
*Get all IDs associated with this key collection.*

## 9.962.1 Member Function Documentation

### 9.962.1.1 getDbValue()

```
QString Digikam::MetadataKeys::getDbValue (  
    const QString & key,  
    ParseSettings & settings ) [override], [protected], [virtual]
```

This method has to be implemented by all child classes. It is called by the [getValue\(\)](#) method.

#### Parameters

<i>key</i>	the key representing the value in the database
<i>settings</i>	the ParseSettings object holding all relevant information about the image.

#### Returns

the value of the given database key

See also

[DbKeysCollection::getValue\(\)](#)

Implements [Digikam::DbKeysCollection](#).

## 9.963 Digikam::MetadataListView Class Reference

Inheritance diagram for Digikam::MetadataListView:

### 9.965.1 Member Function Documentation

#### 9.965.1.1 [parseOperation\(\)](#)

```
QString Digikam::MetadataOption::parseOperation (
    ParseSettings & settings,
    const QRegularExpressionMatch & match ) [override], [protected], [virtual]
```

##### Parameters

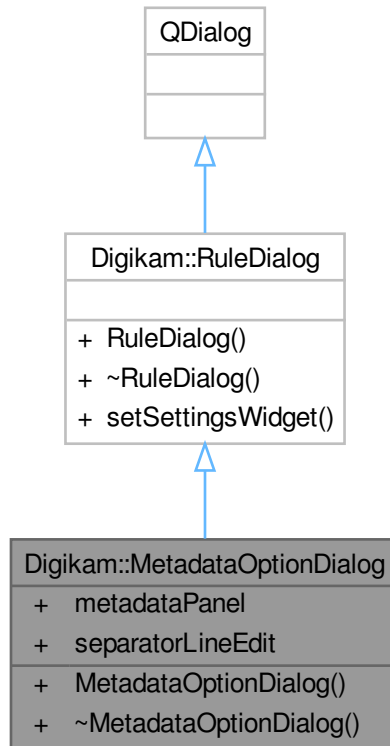

<i>settings</i>	contains settings
<i>match</i>	result of the regular expression match done in <a href="#">Option::parse()</a>

##### Returns

Implements [Digikam::Option](#).

## 9.966 Digikam::MetadataOptionDialog Class Reference

Inheritance diagram for Digikam::MetadataOptionDialog:

### Public Member Functions

- `MetadataOptionDialog` ([Rule](#) \*const parent)

### Public Member Functions inherited from [Digikam::RuleDialog](#)

- `RuleDialog` ([Rule](#) \*const parent)
- void `setSettingsWidget` (QWidget \*const settingsWidget)

### Public Attributes

- `MetadataPanel` \* `metadataPanel` = nullptr
- `QLineEdit` \* `separatorLineEdit` = nullptr

## 9.967 Digikam::MetadataPage Class Reference

Inheritance diagram for Digikam::MetadataPage:

### Public Member Functions

- **MetadataPage** (QWizard \*const dlg)
- void **saveSettings** ()

### Public Member Functions inherited from [Digikam::DWizardPage](#)

- **DWizardPage** (QWizard \*const dlg, const QString &title)
- QWizard \* **assistant** () const

- int **id** () const
- bool **isComplete** () const override
- void **removePageWidget** (QWidget \*const w)
- void **setComplete** (bool b)
- void **setLeftBottomPix** (const QIcon &icon)
- void **setLeftBottomPix** (const QPixmap &pix)
- void **setPageWidget** (QWidget \*const w)
- void **setShowLeftView** (bool v)

## 9.968 Digikam::MetadataPanel Class Reference

Inheritance diagram for Digikam::MetadataPanel:

### Public Member Functions

- **MetadataPanel** (QTabWidget \*const tab)
- void **applySettings** ()
- QStringList **getAllCheckedTags** () const
- QList< [MetadataSelectorView](#) \* > **viewers** () const

**Static Public Member Functions**

- static QStringList **defaultExifFilter** ()
- static QStringList **defaultExifToolFilter** ()
- static QStringList **defaultIptcFilter** ()
- static QStringList **defaultMknoteFilter** ()
- static QStringList **defaultXmpFilter** ()

## 9.969 Digikam::MetadataRemover Class Reference

Inheritance diagram for Digikam::MetadataRemover:

### Public Types

- enum `RemoveAction` { `None = 0` , `Faces` , `Tags` }

## Public Member Functions

- [MetadataRemover](#) (const AlbumList &list=AlbumList(), RemoveAction action=None, [ProgressItem](#) \*const parent=nullptr)  
*Constructor which remove all images metadata from an Albums list.*
- [MetadataRemover](#) (const ItemInfoList &list, RemoveAction action=None, [ProgressItem](#) \*const parent=nullptr)  
*Constructor which remove all images metadata from an Images list.*
- void [setUseMultiCoreCPU](#) (bool b) override  
*Re-implement this method if your tool is able to use multi-core CPU to process item in parallel.*

## Public Member Functions inherited from [Digikam::MaintenanceTool](#)

- [MaintenanceTool](#) (const QString &id, [ProgressItem](#) \*const parent=nullptr)
- void [setNotificationEnabled](#) (bool b)  
*If true, show a notification message on desktop notification manager with time elapsed to run process.*

## Public Member Functions inherited from [Digikam::ProgressItem](#)

- [ProgressItem](#) ([ProgressItem](#) \*const parent, const QString &id, const QString &label, const QString &status, bool canBeCanceled, bool hasThumb)
- void [addChild](#) ([ProgressItem](#) \*const kiddo)
- bool [advance](#) (unsigned int v)  
*Advance total items processed by n values and update percentage in progressbar.*
- bool [canBeCanceled](#) () const
- void [cancel](#) ()
- bool [canceled](#) () const
- unsigned int [completedItems](#) () const
- bool [hasThumbnail](#) () const
- const QString & [id](#) () const
- bool [incCompletedItems](#) (unsigned int v=1)
- void [incTotalItems](#) (unsigned int v=1)
- const QString & [label](#) () const
- [ProgressItem](#) \* [parent](#) () const
- unsigned int [progress](#) () const
- void [removeChild](#) ([ProgressItem](#) \*const kiddo)
- void [reset](#) ()  
*Reset the progress value of this item to 0 and the status string to the empty string.*
- void [setComplete](#) ()  
*Tell the item it has finished.*
- bool [setCompletedItems](#) (unsigned int v)
- void [setLabel](#) (const QString &v)
- void [setProgress](#) (unsigned int v)  
*Set the progress (percentage of completion) value of this item.*
- void [setShowAtStart](#) (bool showAtStart)  
*Set the property to pop-up item when it's added in progress manager.*
- void [setStatus](#) (const QString &v)  
*Set the string to be used for showing this item's current status.*
- void [setThumbnail](#) (const QIcon &icon)  
*Sets whether this item has a thumbnail.*
- void [setTotalItems](#) (unsigned int v)
- void [setUsesBusyIndicator](#) (bool useBusyIndicator)

Sets whether this item uses a busy indicator instead of real progress for its progress bar.

- bool `showAtStart` () const
- const QString & `status` () const
- bool `totalCompleted` () const
- unsigned int `totalItems` () const
- void `updateProgress` ()

Recalculate progress according to total/completed items and update.

- bool `usesBusyIndicator` () const

### Additional Inherited Members

### Public Slots inherited from [Digikam::MaintenanceTool](#)

- void `start` ()

### Signals inherited from [Digikam::MaintenanceTool](#)

- void `signalCanceled` ()  
*Emit when process is canceled.*
- void `signalComplete` ()  
*Emit when process is done (not canceled).*

### Signals inherited from [Digikam::ProgressItem](#)

- void `progressItemAdded` ([ProgressItem](#) \*item)  
*Emitted when a new [ProgressItem](#) is added.*
- void `progressItemCanceled` ([ProgressItem](#) \*item)  
*Emitted when an item was canceled.*
- void `progressItemCanceledById` (const QString &id)
- void `progressItemCompleted` ([ProgressItem](#) \*item)  
*Emitted when a progress item was completed.*
- void `progressItemLabel` ([ProgressItem](#) \*item, const QString &label)  
*Emitted when the label of an item changed.*
- void `progressItemProgress` ([ProgressItem](#) \*item, unsigned int v)  
*Emitted when the progress value of an item changes.*
- void `progressItemStatus` ([ProgressItem](#) \*item, const QString &mess)  
*Emitted when the status message of an item changed.*
- void `progressItemThumbnail` ([ProgressItem](#) \*item, const QPixmap &thumb)  
*Emitted when the thumbnail data must be set in item.*
- void `progressItemUsesBusyIndicator` ([ProgressItem](#) \*item, bool value)  
*Emitted when the busy indicator state of an item changes.*

### Protected Slots inherited from [Digikam::MaintenanceTool](#)

- virtual void `slotCancel` ()
- virtual void `slotDone` ()
- virtual void `slotStart` ()

## 9.969.1 Constructor & Destructor Documentation

### 9.969.1.1 MetadataRemover()

```
Digikam::MetadataRemover::MetadataRemover (
    const AlbumList & list = AlbumList(),
    RemoveAction action = None,
    ProgressItem *const parent = nullptr ) [explicit]
```

If list is empty, whole Albums collection is processed.

## 9.969.2 Member Function Documentation

### 9.969.2.1 setUseMultiCoreCPU()

```
void Digikam::MetadataRemover::setUseMultiCoreCPU (
    bool ) [override], [virtual]
```

Reimplemented from [Digikam::MaintenanceTool](#).

## 9.970 Digikam::MetadataRemoveTask Class Reference

Inheritance diagram for Digikam::MetadataRemoveTask:

### Signals

- void **signalFinished** (const [ItemInfo](#) &, const [QImage](#) &)

### Signals inherited from [Digikam::ActionJob](#)

- void **signalDone** ()  
*Use this signal in your implementation to inform [ActionThreadBase](#) manager the job is done.*
- void **signalProgress** (int)  
*Use this signal in your implementation to inform [ActionThreadBase](#) manager the job progress.*
- void **signalStarted** ()  
*Use this signal in your implementation to inform [ActionThreadBase](#) manager that job is started.*

### Public Member Functions

- void **setMaintenanceData** ([MaintenanceData](#) \*const data=nullptr)
- void **setRemoveAction** ([MetadataRemover::RemoveAction](#) action)

### Public Member Functions inherited from [Digikam::ActionJob](#)

- **ActionJob** ([QObject](#) \*const parent=nullptr)  
*Constructor which delegate deletion of [QRunnable](#) instance to [ActionThreadBase](#), not [QThreadPool](#).*
- [~ActionJob](#) () override  
*Re-implement destructor in you implementation.*

### Protected Member Functions

- void **run** () override

### Additional Inherited Members

### Public Slots inherited from [Digikam::ActionJob](#)

- void **cancel** ()  
*Call this method to cancel job.*

### Public Attributes inherited from [Digikam::ActionJob](#)

- [QElapsedTimer](#) **m\_timer**  
*Timer to determine the running time of the job.*

### Protected Attributes inherited from [Digikam::ActionJob](#)

- bool **m\_cancel** = false  
*You can use this boolean in your implementation to know if job must be canceled.*

## 9.971 Digikam::MetadataSelector Class Reference

Inheritance diagram for Digikam::MetadataSelector:

### Public Member Functions

- **MetadataSelector** ([MetadataSelectorView](#) \*const parent)
- `QStringList checkedTagsList ()`
- void **clearSelection** ()
- void **selectAll** () override
- void **setCheckedTagsList** (const QStringList &list)
- void **setTagsMap** (const [DMetadata::TagsMap](#) &map)

## 9.972 Digikam::MetadataSelectorItem Class Reference

Inheritance diagram for Digikam::MetadataSelectorItem:

### Public Member Functions

- **MetadataSelectorItem** ([MdKeyListViewItem](#) \*const parent, const QString &key, const QString &title, const QString &desc)
- QString **key** () const
- QString **mdKeyTitle** () const

## 9.973 Digikam::MetadataSelectorView Class Reference

Inheritance diagram for Digikam::MetadataSelectorView:

### Public Types

- enum **Backend** { **Exiv2Backend** = 0 , **ExifToolBackend** }
- enum **ControlElement** { **SelectAllBtn** = 0x01 , **ClearBtn** = 0x02 , **DefaultBtn** = 0x04 , **SearchBar** = 0x08 }
- typedef `QFlags< ControlElement >` **ControlElements**

### Public Member Functions

- **MetadataSelectorView** (`QWidget *const parent`, `Backend be`)
- Backend **backend** () const
- `QStringList` **checkedTagsList** () const
- void **clearSelection** ()
- `QStringList` **defaultFilter** () const
- int **itemCount** () const
- void **selectAll** ()
- void **selectDefault** ()

- void **setCheckedTagsList** (const QStringList &list)
- void **setControlElements** (ControlElements controllerMask)
- void **setDefaultFilter** (const QStringList &list)
- void **setTagsMap** (const [DMetadata::TagsMap](#) &map)

## 9.974 Digikam::MetadataStatusBar Class Reference

Inheritance diagram for Digikam::MetadataStatusBar:

### Public Slots

- void **slotAddedProgressItem** ([ProgressItem](#) \*item)
- void **slotCompletedProgressItem** ([ProgressItem](#) \*item)
- void **slotSetPendingItems** (int number)
- void **slotSettingsChanged** ()

### Public Member Functions

- **MetadataStatusBar** ([QWidget](#) \*const parent)

## 9.975 Digikam::MetadataSynchronizer Class Reference

Inheritance diagram for Digikam::MetadataSynchronizer:

### Public Types

- enum **SyncDirection** { **WriteFromDatabaseToFile** = 0 , **ReadFromFileToDatabase** }

## Signals

- void **signalRemovePending** (const [ItemInfo](#) &info)

## Signals inherited from [Digikam::MaintenanceTool](#)

- void **signalCanceled** ()  
*Emit when process is canceled.*
- void **signalComplete** ()  
*Emit when process is done (not canceled).*

## Signals inherited from [Digikam::ProgressItem](#)

- void **progressItemAdded** ([ProgressItem](#) \*item)  
*Emitted when a new [ProgressItem](#) is added.*
- void **progressItemCanceled** ([ProgressItem](#) \*item)  
*Emitted when an item was canceled.*
- void **progressItemCanceledById** (const [QString](#) &id)
- void **progressItemCompleted** ([ProgressItem](#) \*item)  
*Emitted when a progress item was completed.*
- void **progressItemLabel** ([ProgressItem](#) \*item, const [QString](#) &label)  
*Emitted when the label of an item changed.*
- void **progressItemProgress** ([ProgressItem](#) \*item, unsigned int v)  
*Emitted when the progress value of an item changes.*
- void **progressItemStatus** ([ProgressItem](#) \*item, const [QString](#) &mess)  
*Emitted when the status message of an item changed.*
- void **progressItemThumbnail** ([ProgressItem](#) \*item, const [QPixmap](#) &thumb)  
*Emitted when the thumbnail data must be set in item.*
- void **progressItemUsesBusyIndicator** ([ProgressItem](#) \*item, bool value)  
*Emitted when the busy indicator state of an item changes.*

## Public Member Functions

- [MetadataSynchronizer](#) (const [AlbumList](#) &list=[AlbumList](#)(), [SyncDirection](#) direction=[WriteFromDatabaseToFile](#), [ProgressItem](#) \*const parent=nullptr)  
*Constructor which sync all images metadata from an Albums list.*
- [MetadataSynchronizer](#) (const [ItemInfoList](#) &list, [SyncDirection](#)=[WriteFromDatabaseToFile](#), [ProgressItem](#) \*const parent=nullptr)  
*Constructor which sync all images metadata from an Images list.*
- void **setTagsOnly** (bool value)
- void **setUseMultiCoreCPU** (bool b) override  
*Re-implement this method if your tool is able to use multi-core CPU to process item in parallel.*

## Public Member Functions inherited from [Digikam::MaintenanceTool](#)

- **MaintenanceTool** (const [QString](#) &id, [ProgressItem](#) \*const parent=nullptr)
- void **setNotificationEnabled** (bool b)  
*If true, show a notification message on desktop notification manager with time elapsed to run process.*

## Public Member Functions inherited from Digikam::ProgressItem

- **ProgressItem** ([ProgressItem](#) \*const [parent](#), const QString &[id](#), const QString &[label](#), const QString &[status](#), bool [canBeCanceled](#), bool [hasThumb](#))
- void **addChild** ([ProgressItem](#) \*const [kiddo](#))
- bool [advance](#) (unsigned int [v](#))
  - Advance total items processed by n values and update percentage in progressbar.*
- bool [canBeCanceled](#) () const

## Public Member Functions

- **MetaEngine** ()  
*Standard constructor.*
- **MetaEngine** (const [MetaEngineData](#) &data)  
*Constructor to load from parsed data.*
- **MetaEngine** (const QString &filePath)  
*Constructor to Load Metadata from item file.*
- virtual ~**MetaEngine** ()  
*Standard destructor.*

## General methods

- [MetaEngineData](#) **data** () const
- void **setData** (const [MetaEngineData](#) &data)
- bool **loadFromData** (const QByteArray &imgData)  
*Load all metadata (Exif, Iptc, Xmp, and JFIF Comments) from a byte array.*
- bool **loadFromDataAndMerge** (const QByteArray &imgData, const QStringList &exclude=QStringList())  
*Load and merge metadata (Exif, Iptc and Xmp) from a byte array.*
- bool **isEmpty** () const  
*Return 'true' if metadata container in memory as no Comments, Exif, Iptc, and Xmp.*
- QSize **getPixelSize** () const  
*Returns the pixel size of the current item.*
- QString **getMimeType** () const  
*Returns the mime type of this item.*
- void **setReadWithExifTool** (const bool on)  
*Enable or disable reading metadata operations with ExifTool.*

- bool **readWithExifTool** () const  
*Return true if reading metadata operations with ExifTool is enabled.*
- void **setWriteWithExifTool** (const bool on)  
*Enable or disable writing metadata operations with ExifTool.*
- bool **writeWithExifTool** () const  
*Return true if writing metadata operations with ExifTool is enabled.*
- void **setWriteRawFiles** (const bool on)  
*Enable or disable writing metadata operations to RAW files.*
- bool **writeRawFiles** () const  
*Return true if writing metadata operations on RAW files is enabled.*
- void **setWriteDngFiles** (const bool on)  
*Enable or disable writing metadata operations to DNG files.*
- bool **writeDngFiles** () const  
*Return true if writing metadata operations on DNG files is enabled.*
- void **setUseXMPSidecar4Reading** (const bool on)  
*Enable or disable using XMP sidecar for reading metadata.*
- bool **useXMPSidecar4Reading** () const  
*Return true if using XMP sidecar for reading metadata is enabled.*
- void **setUseCompatibleFileName** (const bool on)  
*Enable or disable using compatible file name for sidecar files.*
- bool **useCompatibleFileName** () const  
*Return true if using compatible file name for sidecar files.*
- void **setMetadataWritingMode** (const int mode)  
*Set metadata writing mode.*
- int **metadataWritingMode** () const  
*Return the metadata writing mode.*
- void **setUpdateFileTimeStamp** (bool on)  
*Enable or disable file timestamp updating when metadata are saved.*
- bool **updateFileTimeStamp** () const  
*Return true if file timestamp is updated when metadata are saved.*

### Metadata item information manipulation methods

- bool **setItemProgramId** (const QString &program, const QString &version) const  
*Set Program name and program version in Exif and Iptc Metadata.*
- QSize **getItemDimensions** () const  
*Return the size of item in pixels using Exif tags.*
- bool **setItemDimensions** (const QSize &size) const  
*Set the size of item in pixels in Exif tags.*
- **MetaEngine::ImageOrientation** **getItemOrientation** () const  
*Return the item orientation set in Exif metadata.*
- bool **setItemOrientation** (**ImageOrientation** orientation) const  
*Set the Exif orientation tag of item.*
- **MetaEngine::ImageColorWorkSpace** **getItemColorWorkSpace** () const  
*Return the item color-space set in Exif metadata.*
- bool **setItemColorWorkSpace** (**ImageColorWorkSpace** workspace) const  
*Set the Exif color-space tag of item.*
- QDateTime **getItemDateTime** () const  
*Return the time stamp of item.*
- bool **setItemDateTime** (const QDateTime &dateTime, bool setDateDigitized=false) const  
*Set the Exif and Iptc time stamp.*
- QDateTime **getItemDigitizationDateTime** (bool fallbackToCreationTime=false) const  
*Return the digitization time stamp of the item.*
- bool **getItemPreview** (QImage &preview) const  
*Return a QImage copy of Iptc preview image.*
- bool **setItemPreview** (const QImage &preview) const  
*Set the Iptc preview image.*
- QByteArray **getItemIccProfile** () const  
*Get image ICC profile.*
- bool **setItemIccProfile** (const QByteArray &iccData) const  
*Set image ICC profile.*

## Static Public Member Functions

### Static methods

- static bool `initializeExiv2 ()`  
*Return true if Exiv2 library initialization is done properly.*
- static bool `supportXmp ()`  
*Return true if Exiv2 library is compiled with Xmp metadata support.*
- static bool `supportJpegXL ()`  
*Return true if Exiv2 library is compiled with JpegXL metadata support.*
- static bool `supportBmff ()`  
*Return true if library support Base Media File Format (aka CR3, HEIF, HEIC, and AVIF).*
- static bool `supportMetadataWriting (const QString &typeMime)`  
*Return true if library can write metadata to typeMime file format.*
- static QString `Exiv2Version ()`  
*Return a string version of Exiv2 release in format "major.minor.patch".*

### GPS manipulation methods

- class `MetaEnginePreviews`
- bool `initializeGPSInfo ()`  
*Make sure all static required GPS EXIF and XMP tags exist.*
- bool `getGPSInfo (double &altitude, double &latitude, double &longitude) const`  
*Get all GPS location information set in item.*
- QString `getGPSLatitudeString () const`  
*Get GPS location information set in the item, in the GPSCoordinate format as described in the XMP specification.*
- QString `getGPSLongitudeString () const`
- bool `getGPSLatitudeNumber (double *const latitude) const`  
*Get GPS location information set in the item, as a double floating point number as in degrees where the sign determines the direction ref (North + / South - ; East + / West -).*
- bool `getGPSLongitudeNumber (double *const longitude) const`
- bool `getGPSAltitude (double *const altitude) const`  
*Get GPS altitude information, in meters, relative to sea level (positive sign above sea level)*
- bool `setGPSInfo (const double altitude, const double latitude, const double longitude)`  
*Set all GPS location information into item.*
- bool `setGPSInfo (const double *const altitude, const double latitude, const double longitude)`  
*Set all GPS location information into item.*
- bool `setGPSInfo (const double altitude, const QString &latitude, const QString &longitude)`  
*Set all GPS location information into item.*
- bool `removeGPSInfo ()`  
*Remove all Exif tags relevant of GPS location information.*
- static void `convertToRational (const double number, long int *const numerator, long int *const denominator, const int rounding)`  
*This method converts 'number' to a rational value, returned in the 'numerator' and 'denominator' parameters.*
- static void `convertToRationalSmallDenominator (const double number, long int *const numerator, long int *const denominator)`  
*This method convert a 'number' to a rational value, returned in 'numerator' and 'denominator' parameters.*
- static double `convertDegreeAngleToDouble (double degrees, double minutes, double seconds)`  
*Converts degrees values as a double representation.*
- static QString `convertToGPSCoordinateString (const long int numeratorDegrees, const long int denominatorDegrees, const long int numeratorMinutes, const long int denominatorMinutes, const long int numeratorSeconds, const long int denominatorSeconds, const char directionReference)`

Converts a GPS position stored as rationals in Exif to the form described as GPSCoordinate in the XMP specification, either in the form "256,45,34N" or "256,45.566667N".

- static QString **convertToGPSCoordinateString** (const bool isLatitude, double coordinate)
 

Converts a GPS position stored as double floating point number in degrees to the form described as GPSCoordinate in the XMP specification.
- static bool **convertFromGPSCoordinateString** (const QString &coordinate, long int \*const numeratorDegrees, long int \*const denominatorDegrees, long int \*const numeratorMinutes, long int \*const denominatorMinutes, long int \*const numeratorSeconds, long int \*const denominatorSeconds, char \*const directionReference)
 

Converts a GPSCoordinate string as defined by XMP to three rationals and the direction reference.
- static bool **convertFromGPSCoordinateString** (const QString &gpsString, double \*const coordinate)
 

Convert a GPSCoordinate string as defined by XMP to a double floating point number in degrees where the sign determines the direction ref (North + / South - ; East + / West -).
- static bool **convertToUserPresentableNumbers** (const QString &coordinate, int \*const degrees, int \*const minutes, double \*const seconds, char \*const directionReference)
 

Converts a GPSCoordinate string to user presentable numbers, integer degrees and minutes and double floating point seconds, and a direction reference ('N' or 'S', 'E' or 'W')
- static void **convertToUserPresentableNumbers** (const bool isLatitude, double coordinate, int \*const degrees, int \*const minutes, double \*const seconds, char \*const directionReference)
 

Converts a double floating point number to user presentable numbers, integer degrees and minutes and double floating point seconds, and a direction reference ('N' or 'S', 'E' or 'W').
- bool **setProgramId** () const
 

Set the Program Name and Program Version information in Exif and Iptc metadata.

## File I/O methods

- void **setFilePath** (const QString &path)
 

Set the file path of current item.
- QString **getFilePath** () const
 

Return the file path of current item.
- bool **load** (const QString &filePath, Backend \*backend=nullptr)
 

Load all metadata (Exif, Iptc, Xmp, and JFIF Comments) from a picture (JPEG, RAW, TIFF, PNG, DNG, etc...).
- bool **loadFromSidecarAndMerge** (const QString &filePath)
 

Load metadata from a sidecar file and merge.
- bool **save** (const QString &filePath, bool setVersion=false) const
 

Save all metadata to a file.
- bool **applyChanges** (bool setVersion=false) const
 

The same than **save()** method, but it apply on current item.
- bool **exportChanges** (const QString &exvTmpFile) const
 

Export metadata to a temporary EXV file container.
- static QString **sidecarFilePathForFile** (const QString &path)
 

Return the XMP Sidecar file path for a item file path.
- static QString **sidecarPath** (const QString &path)
 

Like **sidecarFilePathForFile()**, but works for local file path.
- static QUrl **sidecarUrl** (const QUrl &url)
 

Like **sidecarFilePathForFile()**, but works for remote URLs.
- static QUrl **sidecarUrl** (const QString &path)
 

Gives a file url for a local path.
- static bool **hasSidecar** (const QString &path)
 

Performs a QFileInfo based check if the given local file has a sidecar.
- static QString **backendName** (Backend t)
 

Return a string of backend name used to parse metadata from file.

### Comments manipulation methods

- bool **hasComments** () const  
*Return 'true' if metadata container in memory as Comments.*
- bool **clearComments** () const  
*Clear the Comments metadata container in memory.*
- QByteArray **getComments** () const  
*Return a Qt byte array copy of Comments container get from current item.*
- QString **getCommentsDecoded** () const  
*Return a Qt string object of Comments from current item decoded using the 'detectEncodingAndDecode()' method.*
- bool **setComments** (const QByteArray &data) const  
*Set the Comments data using a Qt byte array.*
- static bool **canWriteComment** (const QString &filePath)  
*Return 'true' if Comments can be written in file.*
- static QString **detectLanguageAlt** (const QString &value, QString &lang)  
*Language Alternative autodetection.*

### Exif manipulation methods

- TagsMap **getStdExifTagsList** () const  
*Return a map of all standard Exif tags supported by Exiv2.*
- TagsMap **getMakernoteTagsList** () const  
*Return a map of all non-standard Exif tags (makernotes) supported by Exiv2.*
- bool **hasExif** () const  
*Return 'true' if metadata container in memory as Exif.*
- bool **clearExif** () const  
*Clear the Exif metadata container in memory.*
- QByteArray **getExifEncoded** (bool addExifHeader=false) const  
*Returns the exif data encoded to a QByteArray in a form suitable for storage in a JPEG image.*
- bool **setExif** (const QByteArray &data) const  
*Set the Exif data using a Qt byte array.*
- QImage **getExifThumbnail** (bool fixOrientation) const  
*Return a QImage copy of Exif thumbnail image.*
- bool **rotateExifQImage** (QImage &image, ImageOrientation orientation) const  
*Fix orientation of a QImage image accordingly with Exif orientation tag.*
- bool **setExifThumbnail** (const QImage &thumb) const  
*Set the Exif Thumbnail image.*
- bool **removeExifThumbnail** () const  
*Remove the Exif Thumbnail from the item.*
- bool **setTiffThumbnail** (const QImage &thumb) const  
*Adds a JPEG thumbnail to a TIFF images.*
- QString **getExifComment** (bool readDescription=true) const  
*Return a QString copy of Exif user comments.*
- QString **getExifTagComment** (const char \*exifTagName) const  
*Return a Exif tag comment like a string.*
- bool **setExifComment** (const QString &comment, bool writeDescription=true) const  
*Set the Exif user comments from item.*
- QString **getExifTagString** (const char \*exifTagName, bool escapeCR=true) const  
*Get an Exif tags content like a string.*
- bool **setExifTagString** (const char \*exifTagName, const QString &value) const

- Set an Exif tag content using a string.*

  - bool [getExifTagLong](#) (const char \*exifTagName, long &val) const

*Get an Exif tag content like a long value.*
- bool [getExifTagLong](#) (const char \*exifTagName, long &val, int component) const

*Get an Exif tag content like a long value.*
- bool [setExifTagLong](#) (const char \*exifTagName, long val) const

*Set an Exif tag content using a long value.*
- bool [setExifTagUShort](#) (const char \*exifTagName, unsigned int val) const

*Set an Exif tag content using a unsigned short value.*
- bool [getExifTagRational](#) (const char \*exifTagName, long int &num, long int &den, int component=0) const

*Get the 'component' index of an Exif tags content like a rational value.*
- bool [setExifTagRational](#) (const char \*exifTagName, long int num, long int den) const

*Set an Exif tag content using a rational value.*
- bool [setExifTagURational](#) (const char \*exifTagName, unsigned long int num, unsigned long int den) const

*Set an Exif tag content using a unsigned rational value.*
- QByteArray [getExifTagData](#) (const char \*exifTagName) const

*Get an Exif tag content like a bytes array.*
- bool [setExifTagData](#) (const char \*exifTagName, const QByteArray &data) const

*Set an Exif tag content using a bytes array.*
- QVariant [getExifTagVariant](#) (const char \*exifTagName, bool rationalAsListOfInts=true, bool escapeCR=true, int component=0) const

*Get an Exif tags content as a QVariant.*
- bool [setExifTagVariant](#) (const char \*exifTagName, const QVariant &data, bool rationalWantSmall↔Denominator=true) const

*Set an Exif tag content using a QVariant.*
- bool [removeExifTag](#) (const char \*exifTagName) const

*Remove the Exif tag 'exifTagName' from Exif metadata.*
- QString [getExifTagTitle](#) (const char \*exifTagName)

*Return the Exif Tag title or a null string.*
- QString [getExifTagDescription](#) (const char \*exifTagName)

*Return the Exif Tag description or a null string.*
- QString [createExifUserStringFromValue](#) (const char \*exifTagName, const QVariant &val, bool escape↔CR=true)

*Takes a QVariant value as it could have been retrieved by getExifTagVariant with the given exifTagName, and returns its value properly converted to a string (including translations from Exiv2).*
- [MetaEngine::MetaDataMap](#) [getExifTagsDataList](#) (const QStringList &exifKeysFilter=QStringList(), bool invertSelection=false, bool extractBinary=true) const

*Return a map of Exif tags name/value found in metadata sorted by Exif keys given by 'exifKeysFilter'.*
- static bool [canWriteExif](#) (const QString &filePath)

*Return 'true' if Exif can be written in file.*

### IPTC manipulation methods

- [MetaEngine::TagsMap](#) [getIptcTagsList](#) () const

*Return a map of all standard Iptc tags supported by Exiv2.*
- bool [hasIptc](#) () const

*Return 'true' if metadata container in memory as Iptc.*
- bool [clearIptc](#) () const

*Clear the Iptc metadata container in memory.*
- QByteArray [getIptc](#) (bool addIrbHeader=false) const

*Return a Qt byte array copy of Iptc container get from current item.*

- bool [setIptc](#) (const QByteArray &data) const  
*Set the Iptc data using a Qt byte array.*
- QString [getIptcTagString](#) (const char \*iptcTagName, bool escapeCR=true) const  
*Get an Iptc tag content like a string.*
- bool [setIptcTagString](#) (const char \*iptcTagName, const QString &value) const  
*Set an Iptc tag content using a string.*
- QStringList [getIptcTagsStringList](#) (const char \*iptcTagName, bool escapeCR=true) const  
*Returns a strings list with of multiple Iptc tags from the item.*
- bool [setIptcTagsStringList](#) (const char \*iptcTagName, int maxSize, const QStringList &oldValues, const QStringList &newValues) const  
*Set multiple Iptc tags contents using a strings list.*
- QByteArray [getIptcTagData](#) (const char \*iptcTagName) const  
*Get an Iptc tag content as a bytes array.*
- bool [setIptcTagData](#) (const char \*iptcTagName, const QByteArray &data) const  
*Set an Iptc tag content using a bytes array.*
- bool [removeIptcTag](#) (const char \*iptcTagName) const  
*Remove the all instance of Iptc tags 'iptcTagName' from Iptc metadata.*
- QString [getIptcTagTitle](#) (const char \*iptcTagName)  
*Return the Iptc Tag title or a null string.*
- QString [getIptcTagDescription](#) (const char \*iptcTagName)  
*Return the Iptc Tag description or a null string.*
- [MetaEngine::MetaDataMap](#) [getIptcTagsDataList](#) (const QStringList &iptcKeysFilter=QStringList(), bool invertSelection=false) const  
*Return a map of Iptc tags name/value found in metadata sorted by Iptc keys given by 'iptcKeysFilter'.*
- QStringList [getIptcKeywords](#) () const  
*Return a strings list of Iptc keywords from item.*
- bool [setIptcKeywords](#) (const QStringList &oldKeywords, const QStringList &newKeywords) const  
*Set Iptc keywords using a list of strings defined by 'newKeywords' parameter.*
- QStringList [getIptcSubjects](#) () const  
*Return a strings list of Iptc subjects from item.*
- bool [setIptcSubjects](#) (const QStringList &oldSubjects, const QStringList &newSubjects) const  
*Set Iptc subjects using a list of strings defined by 'newSubjects' parameter.*
- QStringList [getIptcSubCategories](#) () const  
*Return a strings list of Iptc sub-categories from item.*
- bool [setIptcSubCategories](#) (const QStringList &oldSubCategories, const QStringList &newSubCategories) const  
*Set Iptc sub-categories using a list of strings defined by 'newSubCategories' parameter.*
- static bool [canWriteIptc](#) (const QString &filePath)  
*Return 'true' if Iptc can be written in file.*

### XMP manipulation methods

- [MetaEngine::TagsMap](#) [getXmpTagsList](#) () const  
*Return a map of all standard Xmp tags supported by Exiv2.*
- bool [hasXmp](#) () const  
*Return 'true' if metadata container in memory as Xmp.*
- bool [clearXmp](#) () const  
*Clear the Xmp metadata container in memory.*
- QByteArray [getXmp](#) () const  
*Return a Qt byte array copy of XMP container get from current item.*

- bool [setXmp](#) (const QByteArray &data) const  
*Set the Xmp data using a Qt byte array.*
- QString [getXmpTagString](#) (const char \*xmpTagName, bool escapeCR=true) const  
*Get a Xmp tag content like a string.*
- bool [setXmpTagString](#) (const char \*xmpTagName, const QString &value) const  
*Set a Xmp tag content using a string.*
- bool [setXmpTagString](#) (const char \*xmpTagName, const QString &value, [XmpTagType](#) type) const  
*Set a Xmp tag with a specific type.*
- QString [getXmpTagTitle](#) (const char \*xmpTagName)  
*Return the Xmp Tag title or a null string.*
- QString [getXmpTagDescription](#) (const char \*xmpTagName)  
*Return the Xmp Tag description or a null string.*
- [MetaEngine::MetaDataMap](#) [getXmpTagsDataList](#) (const QStringList &xmpKeysFilter=QStringList(), bool invertSelection=false) const  
*Return a map of Xmp tags name/value found in metadata sorted by Xmp keys given by 'xmpKeysFilter'.*
- [MetaEngine::AltLangMap](#) [getXmpTagStringListLangAlt](#) (const char \*xmpTagName, bool escapeCR=true) const  
*Get all redondant Alternative Language Xmp tags content like a map.*
- bool [setXmpTagStringListLangAlt](#) (const char \*xmpTagName, const [MetaEngine::AltLangMap](#) &values) const  
*Set an Alternative Language Xmp tag content using a map.*
- QString [getXmpTagStringLangAlt](#) (const char \*xmpTagName, const QString &langAlt, bool escapeCR) const  
*Get a Xmp tag content like a string set with an alternative language header 'langAlt' (like "fr-FR" for French - RFC3066 notation) If 'escapeCR' parameter is true, the CR characters will be removed.*
- bool [setXmpTagStringLangAlt](#) (const char \*xmpTagName, const QString &value, const QString &langAlt) const  
*Set a Xmp tag content using a string with an alternative language header.*
- QStringList [getXmpTagStringSeq](#) (const char \*xmpTagName, bool escapeCR=true) const  
*Get a Xmp tag content like a sequence of strings.*
- bool [setXmpTagStringSeq](#) (const char \*xmpTagName, const QStringList &seq) const  
*Set a Xmp tag content using the sequence of strings 'seq'.*
- QStringList [getXmpTagStringBag](#) (const char \*xmpTagName, bool escapeCR) const  
*Get a Xmp tag content like a bag of strings.*
- bool [setXmpTagStringBag](#) (const char \*xmpTagName, const QStringList &bag) const  
*Set a Xmp tag content using the bag of strings 'bag'.*
- bool [addToXmpTagStringBag](#) (const char \*xmpTagName, const QStringList &entriesToAdd) const  
*Set an Xmp tag content using a list of strings defined by the 'entriesToAdd' parameter.*
- bool [removeFromXmpTagStringBag](#) (const char \*xmpTagName, const QStringList &entriesToRemove) const  
*Remove those Xmp tag entries that are listed in entriesToRemove from the entries in metadata.*
- QVariant [getXmpTagVariant](#) (const char \*xmpTagName, bool rationalAsListOfInts=true, bool stringEscape↔CR=true) const  
*Get an Xmp tag content as a QVariant.*
- QStringList [getXmpKeywords](#) () const  
*Return a strings list of Xmp keywords from item.*
- bool [setXmpKeywords](#) (const QStringList &newKeywords) const  
*Set Xmp keywords using a list of strings defined by 'newKeywords' parameter.*
- bool [removeXmpKeywords](#) (const QStringList &keywordsToRemove)  
*Remove those Xmp keywords that are listed in keywordsToRemove from the keywords in metadata.*
- QStringList [getXmpSubjects](#) () const  
*Return a strings list of Xmp subjects from item.*
- bool [setXmpSubjects](#) (const QStringList &newSubjects) const  
*Set Xmp subjects using a list of strings defined by 'newSubjects' parameter.*

- bool [removeXmpSubjects](#) (const QStringList &subjectsToRemove)  
*Remove those Xmp subjects that are listed in subjectsToRemove from the subjects in metadata.*
- QStringList [getXmpSubCategories](#) () const  
*Return a strings list of Xmp sub-categories from item.*
- bool [setXmpSubCategories](#) (const QStringList &newSubCategories) const  
*Set Xmp sub-categories using a list of strings defined by 'newSubCategories' parameter.*
- bool [removeXmpSubCategories](#) (const QStringList &categoriesToRemove)  
*Remove those Xmp sub-categories that are listed in categoriesToRemove from the sub-categories in metadata.*
- bool [removeXmpTag](#) (const char \*xmpTagName, bool family=false) const  
*Remove the Xmp tag 'xmpTagName' from Xmp metadata.*
- static bool [canWriteXmp](#) (const QString &filePath)  
*Return 'true' if Xmp can be written in file.*
- static bool [registerXmpNameSpace](#) (const QString &uri, const QString &prefix)  
*Register a namespace which Exiv2 doesn't know yet.*
- static bool [unregisterXmpNameSpace](#) (const QString &uri)  
*Unregister a previously registered custom namespace.*

## 9.978.1 Member Typedef Documentation

### 9.978.1.1 AltLangMap

```
typedef QMap<QString, QString> Digikam::MetaEngine::AltLangMap
```

The map key is the language code following RFC3066 notation (like "fr-FR" for French), and the map value the text.

### 9.978.1.2 TagsMap

```
typedef QMap<QString, QStringList> Digikam::MetaEngine::TagsMap
```

- name,
- title,
- description.

## 9.978.2 Member Enumeration Documentation

### 9.978.2.1 Backend

```
enum Digikam::MetaEngine::Backend
```

#### Enumerator

Exiv2Backend	Default backend used by <a href="#">MetaEngine</a> .
LibRawBackend	<a href="#">DMetadata</a> only.
LibHeifBackend	<a href="#">DMetadata</a> only.
ImageMagickBackend	<a href="#">DMetadata</a> only.
FFMpegBackend	<a href="#">DMetadata</a> only.
ExifToolBackend	<a href="#">DMetadata</a> only.
VideoMergeBackend	<a href="#">DMetadata</a> only.
NoBackend	No backend used (aka file cannot be read).

### 9.978.2.2 MetadataWritingMode

enum `Digikam::MetaEngine::MetadataWritingMode`

See also

[MetadataWritingMode\(\)](#), [metadataWritingMode\(\)](#)

Enumerator

<code>WRITE_TO_FILE_ONLY</code>	Write metadata to item file only.
<code>WRITE_TO_SIDECAR_ONLY</code>	Write metadata to sidecar file only.
<code>WRITE_TO_SIDECAR_AND_FILE</code>	Write metadata to item and sidecar files.
<code>WRITE_TO_SIDECAR_ONLY_FOR_READ_ONLY_FILES</code>	Write metadata to sidecar file only for read only items such as RAW files for example.

## 9.978.3 Member Function Documentation

### 9.978.3.1 addToXmpTagStringBag()

```
bool Digikam::MetaEngine::addToXmpTagStringBag (
    const char * xmpTagName,
    const QStringList & entriesToAdd ) const
```

The existing entries are preserved. The method will compare all new with all already existing entries to prevent duplicates in the item. Return true if the entries have been added to metadata.

### 9.978.3.2 applyChanges()

```
bool Digikam::MetaEngine::applyChanges (
    bool setVersion = false ) const
```

Return true if metadata have been saved into file.

### 9.978.3.3 backendName()

```
QString Digikam::MetaEngine::backendName (
    Backend t ) [static]
```

See Backend enum for details.

### 9.978.3.4 convertDegreeAngleToDouble()

```
double Digikam::MetaEngine::convertDegreeAngleToDouble (
    double degrees,
    double minutes,
    double seconds ) [static]
```

This code take a care about hemisphere position.

**9.978.3.5 convertFromGPSCoordinateString() [1/2]**

```
bool Digikam::MetaEngine::convertFromGPSCoordinateString (
    const QString & coordinate,
    long int *const numeratorDegrees,
    long int *const denominatorDegrees,
    long int *const numeratorMinutes,
    long int *const denominatorMinutes,
    long int *const numeratorSeconds,
    long int *const denominatorSeconds,
    char *const directionReference ) [static]
```

Returns true if the conversion was successful. If minutes is given in the fractional form, a denominator of 1000000 for the minutes will be used.

**9.978.3.6 convertFromGPSCoordinateString() [2/2]**

```
bool Digikam::MetaEngine::convertFromGPSCoordinateString (
    const QString & gpsString,
    double *const coordinate ) [static]
```

Returns true if the conversion was successful.

**9.978.3.7 convertToGPSCoordinateString()**

```
QString Digikam::MetaEngine::convertToGPSCoordinateString (
    const long int numeratorDegrees,
    const long int denominatorDegrees,
    const long int numeratorMinutes,
    const long int denominatorMinutes,
    const long int numeratorSeconds,
    const long int denominatorSeconds,
    const char directionReference ) [static]
```

Precision: A second at sea level measures 30m for our purposes, a minute 1800m. (for more details, see [https://en.wikipedia.org/wiki/Geographic\\_coordinate\\_system](https://en.wikipedia.org/wiki/Geographic_coordinate_system)) This means with a decimal precision of 8 for minutes we get +/-0,018mm. (if I calculated correctly)

**9.978.3.8 convertToRational()**

```
void Digikam::MetaEngine::convertToRational (
    const double number,
    long int *const numerator,
    long int *const denominator,
    const int rounding ) [static]
```

Set the precision using 'rounding' parameter. Use this method if you want to retrieve a most exact rational for a number without further properties, without any requirements to the denominator.

### 9.978.3.9 convertToRationalSmallDenominator()

```
void Digikam::MetaEngine::convertToRationalSmallDenominator (
    const double number,
    long int *const numerator,
    long int *const denominator ) [static]
```

This method will be able to retrieve a rational number from a double - if you constructed your double with 1.0 / 4786.0, this method will retrieve 1 / 4786. If your number is not expected to be rational, use the method above which is just as exact with rounding = 4 and more exact with rounding > 4.

### 9.978.3.10 convertToUserPresentableNumbers()

```
void Digikam::MetaEngine::convertToUserPresentableNumbers (
    const bool isLatitude,
    double coordinate,
    int *const degrees,
    int *const minutes,
    double *const seconds,
    char *const directionReference ) [static]
```

The method needs to know for the direction reference if the latitude or the longitude is meant by the double parameter.

### 9.978.3.11 createExifUserStringFromValue()

```
QString Digikam::MetaEngine::createExifUserStringFromValue (
    const char * exifTagName,
    const QVariant & val,
    bool escapeCR = true )
```

This is equivalent to calling `getExifTagString` directly. If `escapeCR` is true CR characters will be removed from the result.

### 9.978.3.12 detectLanguageAlt()

```
QString Digikam::MetaEngine::detectLanguageAlt (
    const QString & value,
    QString & lang ) [static]
```

Return a QString without language alternative header. Header is saved into 'lang'. If no language alternative is found, value is returned as well and 'lang' is set to a null string.

### 9.978.3.13 exportChanges()

```
bool Digikam::MetaEngine::exportChanges (
    const QString & exvTmpFile ) const
```

'exvTmpFile' is the path to the temporary EXV container to create.

#### 9.978.3.14 `getComments()`

```
QByteArray Digikam::MetaEngine::getComments ( ) const
```

Comments are JFIF section of JPEG images. Look Exiv2 API for more information. Return a null Qt byte array if there is no Comments metadata in memory.

#### 9.978.3.15 `getCommentsDecoded()`

```
QString Digikam::MetaEngine::getCommentsDecoded ( ) const
```

Return a null string if there is no Comments metadata available.

#### 9.978.3.16 `getDigitizationDateTime()`

```
QDateTime Digikam::MetaEngine::getDigitizationDateTime (
    bool fallbackToCreationTime = false ) const
```

First Exif information is checked, then IPTC. If no digitization time stamp is found, [getItemDateTime\(\)](#) is called if `fallbackToCreationTime` is true, or a null `QDateTime` is returned if `fallbackToCreationTime` is false.

#### 9.978.3.17 `getExifComment()`

```
QString Digikam::MetaEngine::getExifComment (
    bool readDescription = true ) const
```

Return a null string if user comments cannot be found.

#### 9.978.3.18 `getExifEncoded()`

```
QByteArray Digikam::MetaEngine::getExifEncoded (
    bool addExifHeader = false ) const
```

Note that this encoding is a lossy operation.

Set true 'addExifHeader' parameter to add an Exif header to Exif metadata. Returns a null Qt byte array if there is no Exif metadata in memory.

#### 9.978.3.19 `getExifTagComment()`

```
QString Digikam::MetaEngine::getExifTagComment (
    const char * exifTagName ) const
```

Return a null string if user comments cannot be found.

**9.978.3.20 getExifTagData()**

```
QByteArray Digikam::MetaEngine::getExifTagData (
    const char * exifTagName ) const
```

Return an empty bytes array if Exif tag cannot be found.

**9.978.3.21 getExifTagLong() [1/2]**

```
bool Digikam::MetaEngine::getExifTagLong (
    const char * exifTagName,
    long & val ) const
```

Return true if Exif tag be found.

**9.978.3.22 getExifTagLong() [2/2]**

```
bool Digikam::MetaEngine::getExifTagLong (
    const char * exifTagName,
    long & val,
    int component ) const
```

Return true if Exif tag be found.

**9.978.3.23 getExifTagRational()**

```
bool Digikam::MetaEngine::getExifTagRational (
    const char * exifTagName,
    long int & num,
    long int & den,
    int component = 0 ) const
```

'num' and 'den' are the numerator and the denominator of the rational value. Return true if Exif tag be found.

**9.978.3.24 getExifTagsDataList()**

```
MetaEngine::MetaDataMap Digikam::MetaEngine::getExifTagsDataList (
    const QStringList & exifKeysFilter = QStringList(),
    bool invertSelection = false,
    bool extractBinary = true ) const
```

'exifKeysFilter' is a QStringList of Exif keys. For example, if you use the string list given below:

```
"Iop" "Thumbnail" "Image" "Photo"
```

List can be empty to not filter output.

... this method will return a map of all Exif tags which :

- include "Iop", or "Thumbnail", or "Image", or "Photo" in the Exif tag keys if 'invertSelection' is false.
- not include "Iop", or "Thumbnail", or "Image", or "Photo" in the Exif tag keys if 'invertSelection' is true. if 'extractBinary' is true, tags with undefined types of data are extracted (default), else contents is replaced by "Binary data ... bytes". Take a care as large binary data as original RAW data from DNG container can be huge and listing Exif tags from GUI can take a while.

### 9.978.3.25 `getExifTagString()`

```
QString Digikam::MetaEngine::getExifTagString (
    const char * exifTagName,
    bool escapeCR = true ) const
```

If 'escapeCR' parameter is true, the CR characters will be removed. If Exif tag cannot be found a null string is returned.

### 9.978.3.26 `getExifTagVariant()`

```
QVariant Digikam::MetaEngine::getExifTagVariant (
    const char * exifTagName,
    bool rationalAsListOfInts = true,
    bool escapeCR = true,
    int component = 0 ) const
```

Returns a null QVariant if the Exif tag cannot be found. For string and integer values the matching QVariant types will be used, for date and time values QVariant::DateTime. Rationals will be returned as QVariant::List with two integer QVariants (numerator, denominator) if rationalAsListOfInts is true, as double if rationalAsListOfInts is false. An exif tag of numerical type may contain more than one value; set component to the desired index.

### 9.978.3.27 `getExifThumbnail()`

```
QImage Digikam::MetaEngine::getExifThumbnail (
    bool fixOrientation ) const
```

Return a null image if thumbnail cannot be found. The 'fixOrientation' parameter will rotate automatically the thumbnail if Exif orientation tags information are attached with thumbnail.

### 9.978.3.28 `getGPSInfo()`

```
bool Digikam::MetaEngine::getGPSInfo (
    double & altitude,
    double & latitude,
    double & longitude ) const
```

Return true if all information can be found.

### 9.978.3.29 `getGPSLatitudeNumber()`

```
bool Digikam::MetaEngine::getGPSLatitudeNumber (
    double *const latitude ) const
```

Returns true if the information is available.

### 9.978.3.30 `getGPSLatitudeString()`

```
QString Digikam::MetaEngine::getGPSLatitudeString ( ) const
```

Returns a null string in the information cannot be found.

### 9.978.3.31 getIptc()

```
QByteArray Digikam::MetaEngine::getIptc (
    bool addIrbHeader = false ) const
```

Set true 'addIrbHeader' parameter to add an Irb header to Iptc metadata. Return a null Qt byte array if there is no Iptc metadata in memory.

### 9.978.3.32 getIptcKeywords()

```
QStringList Digikam::MetaEngine::getIptcKeywords ( ) const
```

Return an empty list if no keyword are set.

### 9.978.3.33 getIptcSubCategories()

```
QStringList Digikam::MetaEngine::getIptcSubCategories ( ) const
```

Return an empty list if no sub-category are set.

### 9.978.3.34 getIptcSubjects()

```
QStringList Digikam::MetaEngine::getIptcSubjects ( ) const
```

Return an empty list if no subject are set.

### 9.978.3.35 getIptcTagData()

```
QByteArray Digikam::MetaEngine::getIptcTagData (
    const char * iptcTagName ) const
```

Return an empty bytes array if Iptc tag cannot be found.

### 9.978.3.36 getIptcTagsDataList()

```
MetaEngine::MetaDataMap Digikam::MetaEngine::getIptcTagsDataList (
    const QStringList & iptcKeysFilter = QStringList(),
    bool invertSelection = false ) const
```

'IptcKeysFilter' is a QStringList of Iptc keys. For example, if you use the string list given below:

```
"Envelope" "Application2"
```

List can be empty to not filter output.

... this method will return a map of all Iptc tags which :

- include "Envelope", or "Application2" in the Iptc tag keys if 'invertSelection' is false.
- not include "Envelope", or "Application2" in the Iptc tag keys if 'invertSelection' is true.

### 9.978.3.37 `getIptcTagsStringList()`

```
QStringList Digikam::MetaEngine::getIptcTagsStringList (
    const char * iptcTagName,
    bool escapeCR = true ) const
```

Return an empty list if no tag is found. Get the values of all IPTC tags with the given tag name in a string list. (In Iptc, there can be multiple tags with the same name) If the 'escapeCR' parameter is true, the CR characters will be removed. If no tag can be found an empty list is returned.

### 9.978.3.38 `getIptcTagString()`

```
QString Digikam::MetaEngine::getIptcTagString (
    const char * iptcTagName,
    bool escapeCR = true ) const
```

If 'escapeCR' parameter is true, the CR characters will be removed. If Iptc tag cannot be found a null string is returned.

### 9.978.3.39 `getItemColorWorkSpace()`

```
MetaEngine::ImageColorWorkSpace Digikam::MetaEngine::getItemColorWorkSpace ( ) const
```

The makernotes of item are also parsed to get this information. See [ImageColorWorkSpace](#) values for details.

### 9.978.3.40 `getItemDateTime()`

```
QDateTime Digikam::MetaEngine::getItemDateTime ( ) const
```

Exif information are check in first, IPTC in second if item don't have Exif information. If no time stamp is found, a null date is returned.

### 9.978.3.41 `getItemDimensions()`

```
QSize Digikam::MetaEngine::getItemDimensions ( ) const
```

Return a null dimension if size cannot be found.

### 9.978.3.42 `getItemOrientation()`

```
MetaEngine::ImageOrientation Digikam::MetaEngine::getItemOrientation ( ) const
```

The makernotes of item are also parsed to get this information. See [ImageOrientation](#) values for details.

### 9.978.3.43 `getItemPreview()`

```
bool Digikam::MetaEngine::getItemPreview (
    QImage & preview ) const
```

Return a null item if preview cannot be found.

#### 9.978.3.44 `getMimeType()`

```
QString Digikam::MetaEngine::getMimeType ( ) const
```

The information is read from the file; see the docs for [getPixelSize\(\)](#) to know when it is available.

#### 9.978.3.45 `getPixelSize()`

```
QSize Digikam::MetaEngine::getPixelSize ( ) const
```

This information is read from the file, not from the metadata. The returned `QSize` is valid if the [MetaEngine](#) object was *constructed* by reading a file or item data; the information is not available when the object was created from [MetaEngineData](#). Note that in the Exif or XMP metadata, there may be fields describing the item size. These fields are not accessed by this method. When replacing the metadata with `setData()`, the metadata may change; this information always keeps referring to the file it was initially read from.

#### 9.978.3.46 `getXmp()`

```
QByteArray Digikam::MetaEngine::getXmp ( ) const
```

Return a null Qt byte array if there is no Xmp metadata in memory.

#### 9.978.3.47 `getXmpKeywords()`

```
QStringList Digikam::MetaEngine::getXmpKeywords ( ) const
```

Return an empty list if no keyword are set.

#### 9.978.3.48 `getXmpSubCategories()`

```
QStringList Digikam::MetaEngine::getXmpSubCategories ( ) const
```

Return an empty list if no sub-category are set.

#### 9.978.3.49 `getXmpSubjects()`

```
QStringList Digikam::MetaEngine::getXmpSubjects ( ) const
```

Return an empty list if no subject are set.

**9.978.3.50 getXmpTagsDataList()**

```
MetaEngine::MetaDataMap Digikam::MetaEngine::getXmpTagsDataList (
    const QStringList & xmpKeysFilter = QStringList(),
    bool invertSelection = false ) const
```

'xmpKeysFilter' is a QStringList of Xmp keys. For example, if you use the string list given below:

"dc" // Dublin Core schema. "xmp" // Standard Xmp schema.

List can be empty to not filter output.

... this method will return a map of all Xmp tags which :

- include "dc", or "xmp" in the Xmp tag keys if 'invertSelection' is false.
- not include "dc", or "xmp" in the Xmp tag keys if 'invertSelection' is true.

**9.978.3.51 getXmpTagString()**

```
QString Digikam::MetaEngine::getXmpTagString (
    const char * xmpTagName,
    bool escapeCR = true ) const
```

If 'escapeCR' parameter is true, the CR characters will be removed. If Xmp tag cannot be found a null string is returned.

**9.978.3.52 getXmpTagStringBag()**

```
QStringList Digikam::MetaEngine::getXmpTagStringBag (
    const char * xmpTagName,
    bool escapeCR ) const
```

If 'escapeCR' parameter is true, the CR characters will be removed from strings. If Xmp tag cannot be found a null string list is returned.

**9.978.3.53 getXmpTagStringLangAlt()**

```
QString Digikam::MetaEngine::getXmpTagStringLangAlt (
    const char * xmpTagName,
    const QString & langAlt,
    bool escapeCR ) const
```

If Xmp tag cannot be found a null string is returned.

**9.978.3.54 getXmpTagStringListLangAlt()**

```
MetaEngine::AltLangMap Digikam::MetaEngine::getXmpTagStringListLangAlt (
    const char * xmpTagName,
    bool escapeCR = true ) const
```

See AltLangMap class description for details. If 'escapeCR' parameter is true, the CR characters will be removed from strings. If Xmp tag cannot be found a null string list is returned.

### 9.978.3.55 getXmpTagStringSeq()

```
QStringList Digikam::MetaEngine::getXmpTagStringSeq (
    const char * xmpTagName,
    bool escapeCR = true ) const
```

If 'escapeCR' parameter is true, the CR characters will be removed from strings. If Xmp tag cannot be found a null string list is returned.

### 9.978.3.56 getXmpTagVariant()

```
QVariant Digikam::MetaEngine::getXmpTagVariant (
    const char * xmpTagName,
    bool rationalAsListOfInts = true,
    bool stringEscapeCR = true ) const
```

Returns a null QVariant if the Xmp tag cannot be found. For string and integer values the matching QVariant types will be used, for date and time values QVariant::DateTime. Rationals will be returned as QVariant::List with two integer QVariants (numerator, denominator) if rationalAsListOfInts is true, as double if rationalAsListOfInts is false. Arrays (ordered, unordered, alternative) are returned as type QStringList. LangAlt values will have type Map (QMap<QString, QVariant>) with the language code as key and the contents as value, of type String.

### 9.978.3.57 initializeExiv2()

```
bool Digikam::MetaEngine::initializeExiv2 ( ) [static]
```

This method must be called before using libMetaEngine with multithreading. It initialize several non re-entrancy code from Adobe XMP SDK, and register a function to cleanup automatically all XMP SDK memory allocation. See Bug #166424 for details. It cleans up memory used by Adobe XMP SDK automatically at application exit. See Bug #166424 for details.

### 9.978.3.58 load()

```
bool Digikam::MetaEngine::load (
    const QString & filePath,
    Backend * backend = nullptr )
```

Return true if metadata have been loaded successfully from file. If backend is non null, return the backend used to populate metadata (Exiv2). See Backend enum for details.

### 9.978.3.59 loadFromData()

```
bool Digikam::MetaEngine::loadFromData (
    const QByteArray & imgData )
```

Return true if metadata have been loaded successfully from item data.

### 9.978.3.60 loadFromDataAndMerge()

```
bool Digikam::MetaEngine::loadFromDataAndMerge (
    const QByteArray & imgData,
    const QStringList & exclude = QStringList() )
```

Use 'exclude' to remove Exif tags from the 'imgData' that will not be merged. Return true if metadata have been loaded and merged successfully from item data.

### 9.978.3.61 loadFromSidecarAndMerge()

```
bool Digikam::MetaEngine::loadFromSidecarAndMerge (
    const QString & filePath )
```

Return true if metadata have been loaded successfully from file.

### 9.978.3.62 metadataWritingMode()

```
int Digikam::MetaEngine::metadataWritingMode ( ) const
```

#### Returns

Metadata writing mode as defined by the [MetadataWritingMode](#) enum.

#### See also

[MetadataWritingMode](#), [setMetadataWritingMode\(\)](#)

### 9.978.3.63 registerXmpNameSpace()

```
bool Digikam::MetaEngine::registerXmpNameSpace (
    const QString & uri,
    const QString & prefix ) [static]
```

This is only needed when new Xmp properties are added manually. 'uri' is the namespace url and 'prefix' the string used to construct new Xmp key (ex. "Xmp.digiKam.tagList").

#### Note

If the Xmp metadata is read from an item, namespaces are decoded and registered by Exiv2 at the same time.

### 9.978.3.64 removeExifTag()

```
bool Digikam::MetaEngine::removeExifTag (
    const char * exifTagName ) const
```

Return true if tag is removed successfully or if no tag was present.

**9.978.3.65 removeFromXmpTagStringBag()**

```
bool Digikam::MetaEngine::removeFromXmpTagStringBag (
    const char * xmpTagName,
    const QStringList & entriesToRemove ) const
```

Return true if tag entries are no longer contained in metadata. All other entries are preserved.

**9.978.3.66 removeGPSInfo()**

```
bool Digikam::MetaEngine::removeGPSInfo ( )
```

Return true if all tags have been removed successfully in metadata. NOTE: The XMP spec does not mention Xmp.exif.GPSLongitudeRef, and Xmp.exif.GPSLatitudeRef. But because we write historically until 7.6.0 release them in [setGPSInfo\(\)](#), we should also remove them here. See bug #450982.

**9.978.3.67 removeIptcTag()**

```
bool Digikam::MetaEngine::removeIptcTag (
    const char * iptcTagName ) const
```

Return true if all tags have been removed successfully (or none were present).

**9.978.3.68 removeXmpKeywords()**

```
bool Digikam::MetaEngine::removeXmpKeywords (
    const QStringList & keywordsToRemove )
```

Return true if keywords are no longer contained in metadata.

**9.978.3.69 removeXmpSubCategories()**

```
bool Digikam::MetaEngine::removeXmpSubCategories (
    const QStringList & categoriesToRemove )
```

Return true if subjects are no longer contained in metadata.

**9.978.3.70 removeXmpSubjects()**

```
bool Digikam::MetaEngine::removeXmpSubjects (
    const QStringList & subjectsToRemove )
```

Return true if subjects are no longer contained in metadata.

### 9.978.3.71 removeXmpTag()

```
bool Digikam::MetaEngine::removeXmpTag (
    const char * xmpTagName,
    bool family = false ) const
```

Return true if tag is removed successfully or if no tag was present.

### 9.978.3.72 rotateExifQImage()

```
bool Digikam::MetaEngine::rotateExifQImage (
    QImage & image,
    ImageOrientation orientation ) const
```

Return true if image is rotated, else false.

### 9.978.3.73 save()

```
bool Digikam::MetaEngine::save (
    const QString & filePath,
    bool setVersion = false ) const
```

This one can be different than original picture to perform transfer operation Return true if metadata have been saved into file.

### 9.978.3.74 setComments()

```
bool Digikam::MetaEngine::setComments (
    const QByteArray & data ) const
```

Return true if Comments metadata have been changed in memory.

### 9.978.3.75 setExif()

```
bool Digikam::MetaEngine::setExif (
    const QByteArray & data ) const
```

Return true if Exif metadata have been changed in memory.

### 9.978.3.76 setExifComment()

```
bool Digikam::MetaEngine::setExifComment (
    const QString & comment,
    bool writeDescription = true ) const
```

Look Exif specification for more details about this tag. Return true if Exif user comments have been changed in metadata.

**9.978.3.77 setExifTagData()**

```
bool Digikam::MetaEngine::setExifTagData (
    const char * exifTagName,
    const QByteArray & data ) const
```

Return true if tag is set successfully.

**9.978.3.78 setExifTagLong()**

```
bool Digikam::MetaEngine::setExifTagLong (
    const char * exifTagName,
    long val ) const
```

Return true if tag is set successfully.

**9.978.3.79 setExifTagRational()**

```
bool Digikam::MetaEngine::setExifTagRational (
    const char * exifTagName,
    long int num,
    long int den ) const
```

'num' and 'den' are the numerator and the denominator of the rational value. Return true if tag is set successfully.

**9.978.3.80 setExifTagString()**

```
bool Digikam::MetaEngine::setExifTagString (
    const char * exifTagName,
    const QString & value ) const
```

Return true if tag is set successfully.

**9.978.3.81 setExifTagURational()**

```
bool Digikam::MetaEngine::setExifTagURational (
    const char * exifTagName,
    unsigned long int num,
    unsigned long int den ) const
```

'num' and 'den' are the numerator and the denominator of the unsigned rational value. Return true if tag is set successfully.

**9.978.3.82 setExifTagUShort()**

```
bool Digikam::MetaEngine::setExifTagUShort (
    const char * exifTagName,
    unsigned int val ) const
```

Return true if tag is set successfully.

**9.978.3.83 setExifTagVariant()**

```
bool Digikam::MetaEngine::setExifTagVariant (
    const char * exifTagName,
    const QVariant & data,
    bool rationalWantSmallDenominator = true ) const
```

Returns true if tag is set successfully. All types described for the [getExifTagVariant\(\)](#) method are supported. Calling with a QVariant of type QByteArray is equivalent to calling setExifTagData. For the meaning of rationalWantSmall↔Denominator, see the documentation of the convertToRational methods. Setting a value with multiple components is currently not supported.

**9.978.3.84 setExifThumbnail()**

```
bool Digikam::MetaEngine::setExifThumbnail (
    const QImage & thumb ) const
```

The thumbnail image must have the right dimensions before. Look Exif specification for details. Return true if thumbnail have been changed in metadata.

**9.978.3.85 setGPSInfo() [1/3]**

```
bool Digikam::MetaEngine::setGPSInfo (
    const double *altitude,
    const double latitude,
    const double longitude )
```

Return true if all information have been changed in metadata. If you do not want altitude to be set, pass a null pointer. NOTE: The XMP spec does not mention Xmp.exif.GPSLatitudeRef, because the reference is included in Xmp.exif.GPSLatitude. See bug #450982.

NOTE: The XMP spec does not mention Xmp.exif.GPSLongitudeRef, because the reference is included in Xmp.↔exif.GPSLongitude. See bug #450982.

**9.978.3.86 setGPSInfo() [2/3]**

```
bool Digikam::MetaEngine::setGPSInfo (
    const double altitude,
    const double latitude,
    const double longitude )
```

Return true if all information have been changed in metadata.

**9.978.3.87 setGPSInfo() [3/3]**

```
bool Digikam::MetaEngine::setGPSInfo (
    const double altitude,
    const QString & latitude,
    const QString & longitude )
```

Return true if all information have been changed in metadata.

### 9.978.3.88 setImageDateTime()

```
bool Digikam::MetaEngine::setImageDateTime (
    const QDateTime & dateTime,
    bool setDateDigitized = false ) const
```

If 'setDateDigitized' parameter is true, the 'Digitalized' time stamp is set, else only 'Created' time stamp is set.

### 9.978.3.89 setIptc()

```
bool Digikam::MetaEngine::setIptc (
    const QByteArray & data ) const
```

Return true if Iptc metadata have been changed in memory.

### 9.978.3.90 setIptcKeywords()

```
bool Digikam::MetaEngine::setIptcKeywords (
    const QStringList & oldKeywords,
    const QStringList & newKeywords ) const
```

Use 'getImageKeywords()' method to set 'oldKeywords' parameter with existing keywords from item. The method will compare all new keywords with all old keywords to prevent duplicate entries in item. Return true if keywords have been changed in metadata.

### 9.978.3.91 setIptcSubCategories()

```
bool Digikam::MetaEngine::setIptcSubCategories (
    const QStringList & oldSubCategories,
    const QStringList & newSubCategories ) const
```

Use 'getImageSubCategories()' method to set 'oldSubCategories' parameter with existing sub-categories from item. The method will compare all new sub-categories with all old sub-categories to prevent duplicate entries in item. Return true if sub-categories have been changed in metadata.

### 9.978.3.92 setIptcSubjects()

```
bool Digikam::MetaEngine::setIptcSubjects (
    const QStringList & oldSubjects,
    const QStringList & newSubjects ) const
```

Use 'getImageSubjects()' method to set 'oldSubjects' parameter with existing subjects from item. The method will compare all new subjects with all old subjects to prevent duplicate entries in item. Return true if subjects have been changed in metadata.

### 9.978.3.93 setIptcTagData()

```
bool Digikam::MetaEngine::setIptcTagData (
    const char * iptcTagName,
    const QByteArray & data ) const
```

Return true if tag is set successfully.

### 9.978.3.94 setIptcTagsStringList()

```
bool Digikam::MetaEngine::setIptcTagsStringList (
    const char * iptcTagName,
    int maxSize,
    const QStringList & oldValues,
    const QStringList & newValues ) const
```

'maxSize' is the max characters size of one entry. Return true if all tags have been set successfully.

### 9.978.3.95 setIptcTagString()

```
bool Digikam::MetaEngine::setIptcTagString (
    const char * iptcTagName,
    const QString & value ) const
```

Return true if tag is set successfully.

### 9.978.3.96 setItemColorWorkSpace()

```
bool Digikam::MetaEngine::setItemColorWorkSpace (
    ImageColorWorkSpace workspace ) const
```

See ImageColorWorkSpace values for details Return true if work-space have been changed in metadata.

### 9.978.3.97 setItemDimensions()

```
bool Digikam::MetaEngine::setItemDimensions (
    const QSize & size ) const
```

Return true if size have been changed in metadata.

### 9.978.3.98 setItemOrientation()

```
bool Digikam::MetaEngine::setItemOrientation (
    ImageOrientation orientation ) const
```

See ImageOrientation values for details Return true if orientation have been changed in metadata.

### 9.978.3.99 setItemPreview()

```
bool Digikam::MetaEngine::setItemPreview (
    const QImage & preview ) const
```

The thumbnail item must have the right size before (64Kb max with JPEG file, else 256Kb). Look Iptc specification for details. Return true if preview have been changed in metadata. Re-implement this method if you want to use another item file format than JPEG to save preview.

### 9.978.3.100 setItemProgramId()

```
bool Digikam::MetaEngine::setItemProgramId (
    const QString & program,
    const QString & version ) const
```

Return true if information have been changed in metadata.

### 9.978.3.101 setMetadataWritingMode()

```
void Digikam::MetaEngine::setMetadataWritingMode (
    const int mode )
```

#### Parameters

<i>mode</i>	Metadata writing mode as defined by the <a href="#">MetadataWritingMode</a> enum.
-------------	---

#### See also

[MetadataWritingMode](#), [metadataWritingMode\(\)](#)

### 9.978.3.102 setTiffThumbnail()

```
bool Digikam::MetaEngine::setTiffThumbnail (
    const QImage & thumb ) const
```

Use this instead of setExifThumbnail for TIFF images.

### 9.978.3.103 setUpdateFileTimeStamp()

```
void Digikam::MetaEngine::setUpdateFileTimeStamp (
    bool on )
```

By default files timestamp are untouched.

### 9.978.3.104 setWriteRawFiles()

```
void Digikam::MetaEngine::setWriteRawFiles (
    const bool on )
```

By default RAW files are untouched.

### 9.978.3.105 setXmp()

```
bool Digikam::MetaEngine::setXmp (
    const QByteArray & data ) const
```

Return true if Xmp metadata have been changed in memory.

### 9.978.3.106 setXmpKeywords()

```
bool Digikam::MetaEngine::setXmpKeywords (
    const QStringList & newKeywords ) const
```

The existing keywords from item are preserved. The method will compare all new keywords with all already existing keywords to prevent duplicate entries in item. Return true if keywords have been changed in metadata.

### 9.978.3.107 setXmpSubCategories()

```
bool Digikam::MetaEngine::setXmpSubCategories (
    const QStringList & newSubCategories ) const
```

The existing sub-categories from item are preserved. The method will compare all new sub-categories with all already existing sub-categories to prevent duplicate entries in item. Return true if sub-categories have been changed in metadata.

### 9.978.3.108 setXmpSubjects()

```
bool Digikam::MetaEngine::setXmpSubjects (
    const QStringList & newSubjects ) const
```

The existing subjects from item are preserved. The method will compare all new subject with all already existing subject to prevent duplicate entries in item. Return true if subjects have been changed in metadata.

### 9.978.3.109 setXmpTagString() [1/2]

```
bool Digikam::MetaEngine::setXmpTagString (
    const char * xmpTagName,
    const QString & value ) const
```

Return true if tag is set successfully.

### 9.978.3.110 setXmpTagString() [2/2]

```
bool Digikam::MetaEngine::setXmpTagString (
    const char * xmpTagName,
    const QString & value,
    MetaEngine::XmpTagType type ) const
```

Return true if tag is set successfully. This method only accept NormalTag, ArrayBagTag and StructureTag. Other XmpTagTypes do nothing

### 9.978.3.111 setXmpTagStringBag()

```
bool Digikam::MetaEngine::setXmpTagStringBag (
    const char * xmpTagName,
    const QStringList & bag ) const
```

Return true if tag is set successfully.

### 9.978.3.112 setXmpTagStringLangAlt()

```
bool Digikam::MetaEngine::setXmpTagStringLangAlt (
    const char * xmpTagName,
    const QString & value,
    const QString & langAlt ) const
```

'langAlt' contain the language alternative information (like "fr-FR" for French - RFC3066 notation) or is null to set alternative language to default settings ("x-default"). Return true if tag is set successfully.

### 9.978.3.113 setXmpTagStringListLangAlt()

```
bool Digikam::MetaEngine::setXmpTagStringListLangAlt (
    const char * xmpTagName,
    const MetaEngine::AltLangMap & values ) const
```

See AltLangMap class description for details. If tag already exist, it will be removed before. Return true if tag is set successfully.

### 9.978.3.114 setXmpTagStringSeq()

```
bool Digikam::MetaEngine::setXmpTagStringSeq (
    const char * xmpTagName,
    const QStringList & seq ) const
```

Return true if tag is set successfully.

### 9.978.3.115 sidecarFilePathForFile()

```
QString Digikam::MetaEngine::sidecarFilePathForFile (
    const QString & path ) [static]
```

If item file path do not include a file name or is empty, this function return a null string.

### 9.978.3.116 supportBmff()

```
bool Digikam::MetaEngine::supportBmff ( ) [static]
```

Note: use this function only after to call [initializeExiv2\(\)](#), else false will always returned. The function return true only if Exiv2 >= 0.27.4 compiled with BMFF support.

## 9.979 Digikam::MetaEngineData Class Reference

### Public Member Functions

- [MetaEngineData](#) (const [MetaEngineData](#) &)
- [MetaEngineData](#) & [operator=](#) (const [MetaEngineData](#) &)

**Friends**

- class **MetaEngine**

## 9.980 Digikam::MetaEngineMergeHelper< Data, Key, KeyString, KeyStringList > Class Template Reference

**Public Member Functions**

- void [exclusiveMerge](#) (const Data &src, Data &dest)  
*Merge two (Exif,IPTC,Xmp) Data packages, the result is stored in dest.*
- void [mergeAll](#) (const Data &src, Data &dest)  
*Merge two (Exif,IPTC,Xmp) Data packages, where the result is stored in dest and fields from src take precedence over existing data from dest.*
- void [mergeFields](#) (const Data &src, Data &dest)  
*Merge two (Exif,IPTC,Xmp) Data packages, the result is stored in dest.*
- [MetaEngineMergeHelper](#) & [operator](#)<< (const KeyString &key)

**Public Attributes**

- KeyStringList **keys**

**9.980.1 Member Function Documentation****9.980.1.1 exclusiveMerge()**

```
template<class Data , class Key , class KeyString , class KeyStringList = QList<KeyString>>
void Digikam::MetaEngineMergeHelper< Data, Key, KeyString, KeyStringList >::exclusiveMerge (
    const Data & src,
    Data & dest ) [inline]
```

The following steps apply only to keys in "keys": The result is determined by src. Keys must exist in src to kept in dest. Fields from src take precedence over existing data from dest.

**9.980.1.2 mergeFields()**

```
template<class Data , class Key , class KeyString , class KeyStringList = QList<KeyString>>
void Digikam::MetaEngineMergeHelper< Data, Key, KeyString, KeyStringList >::mergeFields (
    const Data & src,
    Data & dest ) [inline]
```

Only keys in keys are considered for merging. Fields from src take precedence over existing data from dest.

## 9.981 Digikam::MetaEnginePreviews Class Reference

### Public Member Functions

- **MetaEnginePreviews** (const QByteArray &imgData)  
*Open the given image data and scan the image for embedded preview images.*
- **MetaEnginePreviews** (const QString &filePath)  
*Open the given file and scan for embedded preview images.*
- int **count** () const  
*Returns how many embedded previews are available.*
- QByteArray **data** (int index=0)  
*Retrieve the image data for the specified embedded preview image.*
- int **dataSize** (int index=0)  
*For each contained preview image, return the size of the image data in bytes, width and height of the preview, the mimeType and the file extension.*
- QString **fileExtension** (int index=0)
- int **height** (int index=0)
- QImage **image** (int index=0)  
*Loads the data of the specified preview and creates a QImage from this data.*
- bool **isEmpty** ()  
*Returns if there are any preview images available.*
- QString **mimeType** (int index=0)
- QString **originalMimeType** () const  
*Returns the mimeType of the original image, detected from the file's content.*
- QSize **originalSize** () const  
*Returns the pixel size of the original image, as read from the file (not the metadata).*
- int **size** () const
- int **width** (int index=0)

### 9.981.1 Member Function Documentation

#### 9.981.1.1 dataSize()

```
int Digikam::MetaEnginePreviews::dataSize (
    int index = 0 )
```

Ensure that index < [count\(\)](#). Previews are sorted by width\*height, largest first.

#### 9.981.1.2 image()

```
QImage Digikam::MetaEnginePreviews::image (
    int index = 0 )
```

Returns a null QImage if the loading failed.

## 9.982 Digikam::MetaEngineRotation Class Reference

### Public Types

- enum [TransformationAction](#) {  
[NoTransformation](#) = 0 , [FlipHorizontal](#) = 1 , [FlipVertical](#) = 2 , [Rotate90](#) = 5 ,  
[Rotate180](#) = 6 , [Rotate270](#) = 7 }

*This describes single transform primitives.*

### Public Member Functions

- **MetaEngineRotation** ()  
*Constructs the identity matrix (the matrix describing no transformation)*
- **MetaEngineRotation** (int m11, int m12, int m21, int m22)
- **MetaEngineRotation** ([MetaEngine::ImageOrientation](#) exifOrientation)  
*Returns the matrix corresponding to the given TransformationAction.*
- **MetaEngineRotation** ([TransformationAction](#) action)  
*Returns the matrix corresponding to the given TransformationAction.*
- [MetaEngine::ImageOrientation](#) exifOrientation () const  
*Returns the Exif orientation flag describing this matrix.*
- bool **isNoTransform** () const  
*Returns true if this matrix describes no transformation (is the identity matrix)*
- bool **operator!=** (const [MetaEngineRotation](#) &ma) const
- [MetaEngineRotation](#) & **operator\*=** (const [MetaEngineRotation](#) &ma)
- [MetaEngineRotation](#) & **operator\*=** (const [QList](#)< [TransformationAction](#) > &actions)  
*Applies the given transform actions to this matrix.*
- [MetaEngineRotation](#) & **operator\*=** ([MetaEngine::ImageOrientation](#) exifOrientation)  
*Applies the given Exif orientation flag to this matrix.*
- [MetaEngineRotation](#) & **operator\*=** ([TransformationAction](#) action)  
*Applies the given transform to this matrix.*
- bool **operator==** (const [MetaEngineRotation](#) &ma) const
- [QTransform](#) **toTransform** () const  
*Returns a QTransform representing this matrix.*
- [QList](#)< [TransformationAction](#) > **transformations** () const  
*Returns the actions described by this matrix.*

### Static Public Member Functions

- static [QTransform](#) **toTransform** ([MetaEngine::ImageOrientation](#) orientation)  
*Returns a QTransform for the given Exif orientation.*

### Protected Member Functions

- void **set** (int m11, int m12, int m21, int m22)

### Protected Attributes

- int **m** [2][2]

## 9.982.1 Member Enumeration Documentation

### 9.982.1.1 TransformationAction

enum `Digikam::MetaEngineRotation::TransformationAction`

Note some of the defined Exif rotation flags combine two of these actions. The enum values correspond to those defined as JXFORM\_CODE in the often used the JPEG tool transupp.h.

## Enumerator

NoTransformation	no transformation
FlipHorizontal	horizontal flip
FlipVertical	vertical flip
Rotate90	90-degree clockwise rotation
Rotate180	180-degree rotation
Rotate270	270-degree clockwise (or 90 ccw)

## 9.982.2 Member Function Documentation

### 9.982.2.1 exifOrientation()

```
MetaEngine::ImageOrientation Digikam::MetaEngineRotation::exifOrientation ( ) const
```

Returns ORIENTATION\_UNSPECIFIED if no flag matches this matrix.

### 9.982.2.2 transformations()

```
QList< MetaEngineRotation::TransformationAction > Digikam::MetaEngineRotation::transformations ( ) const
```

Converts the mathematically correct description into the primitive operations that can be carried out losslessly.

The order matters. Not all possible matrices are supported, but all those that can be combined by Exif rotation flags and the transform actions above. If `isNoTransform()` or the matrix is not supported returns an empty list.

## 9.983 Digikam::MetaEngineSettings Class Reference

Inheritance diagram for Digikam::MetaEngineSettings:

## Signals

- void **signalMetaEngineSettingsChanged** (const [MetaEngineSettingsContainer](#) &current, const [MetaEngineSettingsContainer](#) &previous)
- void **signalSettingsChanged** ()

## Public Member Functions

- bool **exifRotate** () const  
*Shortcut to get exif rotation settings from container.*
- void **setSettings** (const [MetaEngineSettingsContainer](#) &settings)  
*Sets the current Metadata settings and writes them to config.*
- [MetaEngineSettingsContainer](#) **settings** () const  
*Returns the current Metadata settings.*

## Static Public Member Functions

- static [MetaEngineSettings](#) \* **instance** ()  
*Global container for Metadata settings.*

## Friends

- class **MetaEngineSettingsCreator**

## 9.983.1 Member Function Documentation

### 9.983.1.1 instance()

```
MetaEngineSettings * Digikam::MetaEngineSettings::instance ( ) [static]
```

All accessor methods are thread-safe.

## 9.984 Digikam::MetaEngineSettingsContainer Class Reference

The class [MetaEngineSettingsContainer](#) encapsulates all metadata related settings.

## Public Types

- enum **AlbumDateSource** {  
  **NewestItemDate** = 0 , **OldestItemDate** , **AverageDate** , **FolderDate** ,  
  **IgnoreDate** }
- enum [RotationBehaviorFlag](#) {  
  **NoRotation** = 0 , **RotateByInternalFlag** = 1 << 0 , **RotateByMetadataFlag** = 1 << 1 , **RotateBy↔**  
  **LosslessRotation** = 1 << 2 ,  
  **RotateByLossyRotation** = 1 << 3 , **RotatingFlags** = RotateByInternalFlag | RotateByMetadataFlag ,  
  **RotatingPixels** = RotateByLosslessRotation | RotateByLossyRotation }
- typedef QFlags< [RotationBehaviorFlag](#) > **RotationBehaviorFlags**  
*Describes the allowed and desired operation when rotating a picture.*

## Public Member Functions

- QStringList **defaultExifToolSearchPaths** () const
- void **readFromConfig** (const KConfigGroup &group)
- void **writeToConfig** (KConfigGroup &group) const

## Public Attributes

- AlbumDataSource **albumDateFrom** = OldestItemDate
- bool **exifRotate** = true
- bool **exifSetOrientation** = true
- QString **exifToolPath**
- [MetaEngine::MetadataWritingMode](#) **metadataWritingMode** = [MetaEngine::WRITE\\_TO\\_FILE\\_ONLY](#)
- bool **readWithExifTool** = false
- bool **rescanImagelfModified** = false
- RotationBehaviorFlags **rotationBehavior** = RotationBehaviorFlags(RotatingFlags | RotateByLossless↔ Rotation)
- bool **saveColorLabel** = false
- bool **saveComments** = false
- bool **saveDateTime** = false
- bool **saveFaceTags** = false
- bool **savePickLabel** = false
- bool **savePosition** = false
- bool **saveRating** = false
- bool **saveTags** = false
- bool **saveTemplate** = false
- QStringList **sidecarExtensions**
- bool **updateFileTimeStamp** = true
- bool **useCompatibleFileName** = false
- bool **useFastScan** = false
- bool **useLazySync** = false
- bool **useXMPSidecar4Reading** = false
- bool **writeDngFiles** = false
- bool **writeRawFiles** = false
- bool **writeWithExifTool** = false

### 9.984.1 Detailed Description

#### Note

this allows supply changed arguments to [MetadataHub](#) without changing the global settings.

### 9.984.2 Member Enumeration Documentation

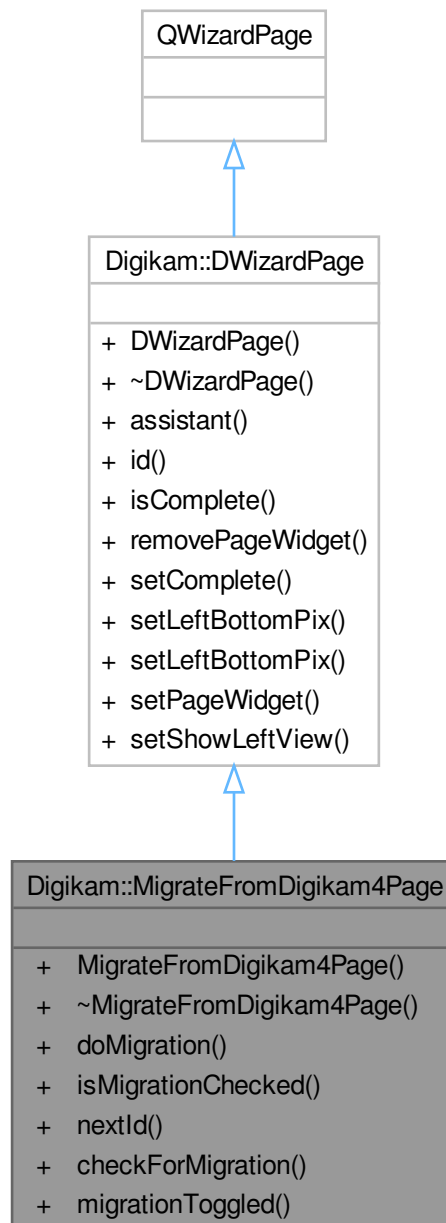

#### 9.984.2.1 RotationBehaviorFlag

```
enum Digikam::MetaEngineSettingsContainer::RotationBehaviorFlag
```

The modes are in escalating order and describe if an operation is allowed. What is actually done will be governed by what is possible: 1) RAW files cannot be rotated by content, setting the metadata may be problematic 2) Read-Only files cannot be edited, neither content nor metadata 3) Writable files will have lossy compression 4) Only JPEG and PGF offer lossless rotation Using a contents-based rotation always implies resetting the flag.

## 9.985 Digikam::MigrateFromDigikam4Page Class Reference

Inheritance diagram for Digikam::MigrateFromDigikam4Page:

### Public Slots

- void **migrationToggled** (bool b)

### Public Member Functions

- **MigrateFromDigikam4Page** (QWizard \*const dlg)
- void **doMigration** ()

## 9.993.1 Member Enumeration Documentation

### 9.993.1.1 MLPipelineStage

enum Digikam::MLPipelineFoundation::MLPipelineStage

#### Enumerator

Finder	Finder stage finds the data for the pipeline.
Loader	Loader stage loads and prepares the data for extraction.
Extractor	Extractor stage pulls the features from the data.
Classifier	Classifier stage adds a label (face, autotag, etc) to an extracted object.
Trainer	Classifier stage adds a label (face, autotag, etc) to an extracted object.
Writer	Writer stage saves the data to the DB.
None	Empty stage.

## 9.993.2 Member Function Documentation

### 9.993.2.1 cancel()

```
void Digikam::MLPipelineFoundation::cancel ( ) [virtual]
```

worker threads can be in 1 of 3 states when cancel is called

1. waiting for a new package
2. processing a package
3. waiting to push a package

handle all 3 cases so the worker thread sees the cancel signal

## 9.994 Digikam::MLPipelineFoundation::\_MLPipelinePerformanceProfile Struct Reference

### Public Attributes

- QAtomicInteger< int > **currentThreadCount**
- int **elapsedTime** = 0
- int **itemCount** = 0
- int **maxElapsedTime** = 0
- int **maxQueueCount** = 0
- QAtomicInteger< int > **maxThreadCount**

## 9.995 Digikam::MLPipelinePackageFoundation Class Reference

Inheritance diagram for Digikam::MLPipelinePackageFoundation:

### Public Attributes

- quint64 **size** = 0
- QIcon **thumbnailIcon**

## 9.996 Digikam::MLPipelinePackageNotify Class Reference

Inheritance diagram for Digikam::MLPipelinePackageNotify:

### Public Types

- typedef `QExplicitlySharedDataPointer< MLPipelinePackageNotify >` **Ptr**

### Public Member Functions

- **MLPipelinePackageNotify** (const QString &\_name, const QString &\_path, int \_processed, const [DImg](#) &↔\_thumbnail)
- **MLPipelinePackageNotify** (const QString &\_name, const QString &\_path, int \_processed, const [QIcon](#) &↔\_thumbnail)

### Public Attributes

- const QString **name**
- const QString **path**
- int **processed** = 0
- [QIcon](#) **thumbnail**

## 9.997 Digikam::ModelCompleter Class Reference

Inheritance diagram for Digikam::ModelCompleter:

### Signals

- void **signalActivated** ()
- void **signalHighlighted** (int albumId)

### Public Member Functions

- **ModelCompleter** (QObject \*const parent=nullptr)
- void **addItem** (const QString &item)
- QAbstractItemModel \* **itemModel** () const
- QStringList **items** () const
- void **setItemModel** (QAbstractItemModel \*const model, int uniqueIdRole, int displayRole=Qt::DisplayRole)  
*If the given model is != null, the model is used to populate the completion for this text field.*
- void **setList** (const QStringList &list)

### 9.997.1 Member Function Documentation

#### 9.997.1.1 setItemModel()

```

void Digikam::ModelCompleter::setItemModel (
    QAbstractItemModel *const model,
    int uniqueIdRole,
    int displayRole = Qt::DisplayRole )
  
```

## Parameters

<i>model</i>	to fill from or null for manual mode
<i>uniqueIdRole</i>	a role for which the model will return a unique integer for each entry
<i>displayRole</i>	the role to retrieve the text for completion, default is Qt::DisplayRole.

## 9.998 Digikam::ModelIndexBasedComboBox Class Reference

Inheritance diagram for Digikam::ModelIndexBasedComboBox:

### Public Member Functions

- [ModelIndexBasedComboBox](#) (QWidget \*const parent=nullptr)  
*QComboBox has a current index based on a single integer.*

- QModelIndex **currentIndex** () const
- void **hidePopup** () override
- void **setCurrentIndex** (const QModelIndex &index)
- void **showPopup** () override

### Protected Attributes

- QPersistentModelIndex **m\_currentIndex**

## 9.998.1 Constructor & Destructor Documentation

### 9.998.1.1 QModelIndexBasedComboBox()

```
Digikam::ModelIndexBasedComboBox::ModelIndexBasedComboBox (  
    QWidget *const parent = nullptr ) [explicit]
```

This is not sufficient for more complex models. This class is a combo box that stores a current index based on QModelIndex.

## 9.999 Digikam::ModelMenu Class Reference

A QMenu that is dynamically populated from a QAbstractItemModel.

Inheritance diagram for Digikam::ModelMenu:

### Signals

- void **activated** (const QModelIndex &index)
- void **hovered** (const QString &text)

### Public Member Functions

- **ModelMenu** (QWidget \*const parent=nullptr)

- int **firstSeparator** () const
- int **hoverRole** () const
- QAction \* **makeAction** (const QIcon &icon, const QString &text, QObject \*const parent)
- int **maxRows** () const
- QAbstractItemModel \* **model** () const
- QModelIndex **rootIndex** () const
- int **separatorRole** () const
- void **setFirstSeparator** (int offset)
- void **setHoverRole** (int role)
- void **setMaxRows** (int max)
- void **setModel** (QAbstractItemModel \*model)
- void **setRootIndex** (const QModelIndex &index)
- void **setSeparatorRole** (int role)

### Protected Member Functions

- void **createMenu** (const QModelIndex &parent, int max, QMenu \*parentMenu=nullptr, QMenu \*menu=nullptr)
  - put all of the children of parent into menu up to max*
- virtual void **postPopulated** ()
  - add any actions after the tree*
- virtual bool **prePopulated** ()
  - add any actions before the tree, return true if any actions are added.*

## 9.999.1 Member Function Documentation

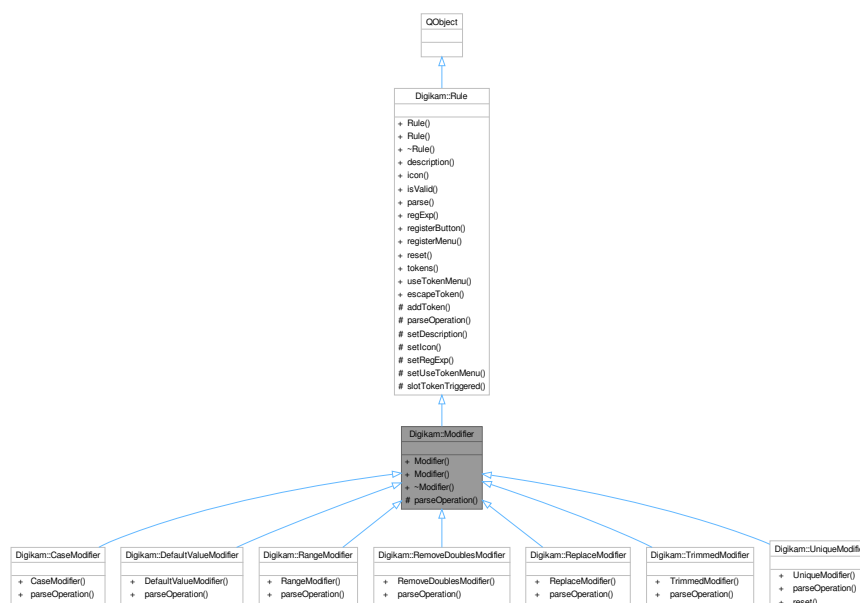

### 9.999.1.1 prePopulated()

```
bool Digikam::ModelMenu::prePopulated ( ) [protected], [virtual]
```

Reimplemented in [Digikam::BookmarksMenu](#).

## 9.1000 Digikam::Modifier Class Reference

Inheritance diagram for Digikam::Modifier:

## Public Member Functions

- **Modifier** (const QString &name, const QString &description)
- **Modifier** (const QString &name, const QString &description, const QString &icon)

## Public Member Functions inherited from [Digikam::Rule](#)

- **Rule** (const QString &name)
- **Rule** (const QString &name, const QString &icon)
- QString **description** () const
- QPixmap **icon** (Rule::IconType type=Rule::Action) const
- bool **isValid** () const

*Checks the validity of the parse object.*

- **ParseResults parse** ([ParseSettings](#) &settings)
- QRegularExpression & **regExp** () const
- TODO: This is probably not needed anymore.*
- QPushButton \* **registerButton** (QWidget \*parent)
- Register a button in the parent object.*
- QAction \* **registerMenu** (QMenu \*parent)
- Register a menu action in the parent object.*
- virtual void **reset** ()
- Resets the parser to its initial state.*
- TokenList & **tokens** () const
- bool **useTokenMenu** () const
- Returns true if a token menu is used.*

## Protected Member Functions

- QString **parseOperation** ([ParseSettings](#) &settings, const QRegularExpressionMatch &match) override=0
- TODO: describe me.*

## Protected Member Functions inherited from [Digikam::Rule](#)

- bool **addToken** (const QString &id, const QString &description, const QString &actionName=QString())
- add a token to the parser, every parser should at least assign one token object*
- void **setDescription** (const QString &desc)
- void **setIcon** (const QString &pixmap)
- void **setRegExp** (const QRegularExpression &regExp)
- void **setUseTokenMenu** (bool value)

*If multiple tokens have been assigned to a rule, a menu will be created.*

## Additional Inherited Members

## Public Types inherited from [Digikam::Rule](#)

- enum **IconType** { **Action** = 0 , **Dialog** }

## Signals inherited from [Digikam::Rule](#)

- void **signalTokenTriggered** (const QString &)

## Static Public Member Functions inherited from [Digikam::Rule](#)

- static QString **escapeToken** (const QString &token)  
*Escape the token characters to make them work in regular expressions.*

## Protected Slots inherited from [Digikam::Rule](#)

- virtual void **slotTokenTriggered** (const QString &)

## 9.1000.1 Member Function Documentation

### 9.1000.1.1 parseOperation()

```
QString Digikam::Modifier::parseOperation (
    ParseSettings & settings,
    const QRegularExpressionMatch & match ) [override], [protected], [pure virtual]
```

#### Parameters

<i>settings</i>	contains settings
<i>match</i>	result of the regular expression match done in <code>Option::parse()</code>

#### Returns

Implements [Digikam::Rule](#).

Implemented in [Digikam::CaseModifier](#), [Digikam::DefaultValueModifier](#), [Digikam::RangeModifier](#), [Digikam::RemoveDoublesModifier](#), [Digikam::ReplaceModifier](#), [Digikam::TrimmedModifier](#), and [Digikam::UniqueModifier](#).

## 9.1001 Digikam::MonthWidget Class Reference

Inheritance diagram for Digikam::MonthWidget:

### Public Member Functions

- **MonthWidget** (`QWidget *const parent`)
- void **setActive** (`bool val`)
- void **setItemModel** (`ItemFilterModel *const model`)
- void **setYearMonth** (`int year, int month`)
- `QSize` **sizeHint** () const override

### Protected Member Functions

- void **mousePressEvent** (`QMouseEvent *e`) override
- void **paintEvent** (`QPaintEvent *`) override
- void **resizeEvent** (`QResizeEvent *e`) override

**9.1008 Digikam::NamespaceListView Class Reference**

Inheritance diagram for Digikam::NamespaceListView:

**Public Slots**

- void **slotDeleteSelected** ()  
*slotDeleteSelected - delete selected item from Quick Access List*
- void **slotMoveItemDown** ()
- void **slotMoveItemUp** ()

## Signals

- void **signalItemsChanged** ()  
*contextMenuEvent* - reimplemented method from *QListView* to handle custom context menu

## Public Member Functions

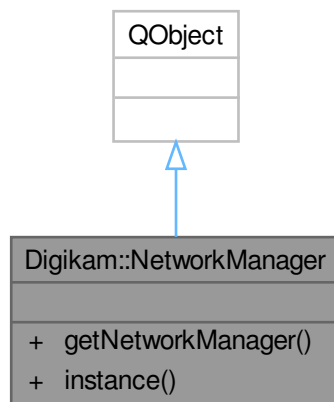

- **NamespaceListView** (QWidget \*const parent=nullptr)
- QModelIndexList **mySelectedIndexes** ()

## Protected Member Functions

- void **dropEvent** (QDropEvent \*e) override
- QModelIndex **indexVisuallyAt** (const QPoint &p)
- void **startDrag** (Qt::DropActions supportedActions) override  
*Reimplemented methods to enable custom drag-n-drop in QListView.*

## 9.1009 Digikam::NetworkManager Class Reference

Inheritance diagram for Digikam::NetworkManager:

## Public Member Functions

- QNetworkAccessManager \* **getNetworkManager** (QObject \*const object) const  
*Get the current QNetworkAccessManager or create a new QNetworkAccessManager if the passed QObject runs on a different thread.*

## Static Public Member Functions

- static NetworkManager \* **instance** ()  
*Global instance of internal network manager.*

## Friends

- class **NetworkManagerCreator**

## 9.1009.1 Member Function Documentation

### 9.1009.1.1 instance()

```
NetworkManager * Digikam::NetworkManager::instance ( ) [static]
```

All accessor methods are thread-safe.

## 9.1010 Digikam::NewItemsFinder Class Reference

Inheritance diagram for Digikam::NewItemsFinder:

### Public Types

- enum `FinderMode` { `CompleteCollectionScan` , `ScanDeferredFiles` , `ScheduleCollectionScan` }

## Public Member Functions

- **NewItemsFinder** (const [FinderMode](#) mode=[CompleteCollectionScan](#), const QStringList &foldersToScan=QStringList(), [ProgressItem](#) \*const parent=nullptr)

## Public Member Functions inherited from [Digikam::MaintenanceTool](#)

- **MaintenanceTool** (const QString &id, [ProgressItem](#) \*const parent=nullptr)
- void **setNotificationEnabled** (bool b)
  - If true, show a notification message on desktop notification manager with time elapsed to run process.*
- virtual void **setUseMultiCoreCPU** (bool)
  - Re-implement this method if your tool is able to use multi-core CPU to process item in parallel.*

## Public Member Functions inherited from [Digikam::ProgressItem](#)

- **ProgressItem** ([ProgressItem](#) \*const parent, const QString &id, const QString &label, const QString &status, bool [canBeCanceled](#), bool hasThumb)
- void **addChild** ([ProgressItem](#) \*const kiddo)
- bool [advance](#) (unsigned int v)
  - Advance total items processed by n values and update percentage in progressbar.*
- bool [canBeCanceled](#) () const
- void **cancel** ()
- bool [canceled](#) () const
- unsigned int **completedItems** () const
- bool [hasThumbnail](#) () const
- const QString &[id](#) () const
- bool **incCompletedItems** (unsigned int v=1)
- void **incTotalItems** (unsigned int v=1)
- const QString &[label](#) () const
- [ProgressItem](#) \* [parent](#) () const
- unsigned int [progress](#) () const
- void **removeChild** ([ProgressItem](#) \*const kiddo)
- void **reset** ()
  - Reset the progress value of this item to 0 and the status string to the empty string.*
- void [setComplete](#) ()
  - Tell the item it has finished.*
- bool **setCompletedItems** (unsigned int v)
- void [setLabel](#) (const QString &v)
- void [setProgress](#) (unsigned int v)
  - Set the progress (percentage of completion) value of this item.*
- void [setShowAtStart](#) (bool [showAtStart](#))
  - Set the property to pop-up item when it's added in progress manager.*
- void [setStatus](#) (const QString &v)
  - Set the string to be used for showing this item's current status.*
- void [setThumbnail](#) (const QIcon &icon)
  - Sets whether this item has a thumbnail.*
- void **setTotalItems** (unsigned int v)
- void [setUsesBusyIndicator](#) (bool useBusyIndicator)
  - Sets whether this item uses a busy indicator instead of real progress for its progress bar.*
- bool [showAtStart](#) () const
- const QString &[status](#) () const
- bool **totalCompleted** () const
- unsigned int **totalItems** () const
- void **updateProgress** ()
  - Recalculate progress according to total/completed items and update.*
- bool [usesBusyIndicator](#) () const

## Additional Inherited Members

## Public Slots inherited from [Digikam::MaintenanceTool](#)

- void **start** ()

## Signals inherited from [Digikam::MaintenanceTool](#)

- void **signalCanceled** ()  
*Emit when process is canceled.*
- void **signalComplete** ()  
*Emit when process is done (not canceled).*

## Signals inherited from [Digikam::ProgressItem](#)

- void [progressItemAdded](#) ([ProgressItem](#) \*item)  
*Emitted when a new [ProgressItem](#) is added.*
- void [progressItemCanceled](#) ([ProgressItem](#) \*item)  
*Emitted when an item was canceled.*
- void **progressItemCanceledById** (const QString &id)
- void [progressItemCompleted](#) ([ProgressItem](#) \*item)  
*Emitted when a progress item was completed.*
- void [progressItemLabel](#) ([ProgressItem](#) \*item, const QString &label)  
*Emitted when the label of an item changed.*
- void [progressItemProgress](#) ([ProgressItem](#) \*item, unsigned int v)  
*Emitted when the progress value of an item changes.*
- void [progressItemStatus](#) ([ProgressItem](#) \*item, const QString &mess)  
*Emitted when the status message of an item changed.*
- void [progressItemThumbnail](#) ([ProgressItem](#) \*item, const QPixmap &thumb)  
*Emitted when the thumbnail data must be set in item.*
- void [progressItemUsesBusyIndicator](#) ([ProgressItem](#) \*item, bool value)  
*Emitted when the busy indicator state of an item changes.*

## Protected Slots inherited from [Digikam::MaintenanceTool](#)

- virtual void **slotCancel** ()
- virtual void **slotDone** ()
- virtual void **slotStart** ()

## 9.1010.1 Member Enumeration Documentation

### 9.1010.1.1 FinderMode

```
enum Digikam::NewItemsFinder::FinderMode
```

## Enumerator

CompleteCollectionScan	Scan whole collection immediately.
ScanDeferredFiles	Defer whole collection scan.
ScheduleCollectionScan	Scan immediately folders list passed in constructor.

## 9.1011 Digikam::NoDuplicatesImportFilterModel Class Reference

Inheritance diagram for Digikam::NoDuplicatesImportFilterModel:

### Public Member Functions

- **NoDuplicatesImportFilterModel** (QObject \*const parent=nullptr)

## Public Member Functions inherited from [Digikam::ImportSortFilterModel](#)

- **ImportSortFilterModel** (QObject \*const parent=nullptr)
- qlonglong **camItemId** (const QModelIndex &index) const
- QList< qlonglong > **camItemIds** (const QList< QModelIndex > &indexes) const
- [CamItemInfo](#) **camItemInfo** (const QModelIndex &index) const
- QList< [CamItemInfo](#) > **camItemInfos** (const QList< QModelIndex > &indexes) const
- QList< [CamItemInfo](#) > **camItemInfosSorted** () const
  - Returns a list of all camera infos, sorted according to this model.*
- virtual [ImportFilterModel](#) \* **importFilterModel** () const
  - Returns this, any chained [ImportFilterModel](#), or 0.*
- QModelIndex **indexForCamItemId** (qlonglong id) const
- QModelIndex **indexForCamItemInfo** (const [CamItemInfo](#) &info) const
- QModelIndex **indexForPath** (const QString &filePath) const
- QModelIndex **mapFromDirectSourceToSourceImportModel** (const QModelIndex &sourceModelIndex) const
- QModelIndex **mapFromSourceImportModel** (const QModelIndex &importModelIndex) const
- QList< QModelIndex > **mapListFromSource** (const QList< QModelIndex > &sourceIndexes) const
- QList< QModelIndex > **mapListToSource** (const QList< QModelIndex > &indexes) const
- QModelIndex **mapToSourceImportModel** (const QModelIndex &proxyIndex) const
  - Convenience methods mapped to [ImportItemModel](#).*

## 9.1013 Digikam::NoiseDetector Class Reference

Inheritance diagram for Digikam::NoiseDetector:

**Public Types**

- typedef QList< cv::Mat > **Mat3D**

**Public Member Functions**

- float [detect](#) (const cv::Mat &image) const override

**Public Member Functions inherited from [Digikam::AbstractDetector](#)**

- **AbstractDetector** (QObject \*const parent=nullptr)

**Static Public Attributes**

- static const Mat3D **filtersHaar** = initFiltersHaar()

**Additional Inherited Members****Static Public Member Functions inherited from [Digikam::AbstractDetector](#)**

- static cv::Mat **prepareForDetection** (const [DImg](#) &inputImage)

*NOTE: Maybe this function will move to `read_image()` of `imagequalityparser` in case all detectors of IQS use `cv::Mat`.*

**9.1013.1 Member Function Documentation****9.1013.1.1 detect()**

```
float Digikam::NoiseDetector::detect (
    const cv::Mat & image ) const [override], [virtual]
```

Implements [Digikam::AbstractDetector](#).

**9.1014 Digikam::NonDeterministicRandomData Class Reference**

Inheritance diagram for Digikam::NonDeterministicRandomData:

## Public Member Functions

- [NonDeterministicRandomData](#) (int size)

*Constructs a QByteArray of given byte size filled with non-deterministic random data.*

## 9.1014.1 Constructor & Destructor Documentation

### 9.1014.1.1 NonDeterministicRandomData()

```
Digikam::NonDeterministicRandomData::NonDeterministicRandomData (  
    int size ) [explicit]
```

For larger quantities of data, prefer using a [RandomNumberGenerator](#) seeded with non-deterministic data.

## 9.1015 Digikam::NormalizeFilter Class Reference

Inheritance diagram for Digikam::NormalizeFilter:

### Public Member Functions

- **NormalizeFilter** (`Dlmg *const orgImage`, `const Dlmg *const reflImage`, `QObject *const parent=nullptr`)
- **NormalizeFilter** (`QObject *const parent=nullptr`)

- [FilterAction filterAction \(\)](#) override  
*Returns the action description corresponding to currently set options.*
- [QString filterIdentifier \(\)](#) const override  
*Return the identifier for this filter in the image history.*
- void [readParameters \(const FilterAction &action\)](#) override

## Public Member Functions inherited from [Digikam::DImgThreadedFilter](#)

- [DImgThreadedFilter \(DImg \\*const orgImage, QObject \\*const parent, const QString &name=QString\(\)\)](#)  
*Constructs a filter with all arguments (ready to use).*
- [DImgThreadedFilter \(QObject \\*const parent=nullptr, const QString &name=QString\(\)\)](#)  
*Constructs a filter without argument.*
- virtual void [cancelFilter \(\)](#)  
*Cancel the threaded computation.*
- const [QString &filterName \(\)](#)
- int [filterVersion \(\)](#) const
- [DImg getTargetImage \(\)](#)
- [QList< int > multithreadedSteps \(int stop, int start=0\)](#) const  
*This method return a list of steps to process parallelized operation in filter using QtConcurrents API.*
- virtual bool [parametersSuccessfullyRead \(\)](#) const  
*Optional: error handling for readParameters.*
- virtual [QString readParametersError \(const FilterAction &actionThatFailed\)](#) const
- void [setFilterName \(const QString &name\)](#)
- void [setFilterVersion \(int version\)](#)  
*Replaying a filter action: Set the filter version.*
- void [setOriginalImage \(const DImg &orgImage\)](#)
- void [setupAndStartDirectly \(const DImg &orgImage, DImgThreadedFilter \\*const master, int progress←Begin=0, int progressEnd=100\)](#)  
*Initializes the filter for use as a slave and directly starts computation (in-thread)*
- void [setupFilter \(const DImg &orgImage\)](#)  
*You need to call this and then start filter of you used the constructor not setting an original image.*
- virtual void [startFilter \(\)](#)  
*Start the threaded computation.*
- virtual void [startFilterDirectly \(\)](#)  
*Start computation of this filter, directly in this thread.*
- virtual [QList< int > supportedVersions \(\)](#) const

## Public Member Functions inherited from [Digikam::DynamicThread](#)

- [DynamicThread \(QObject \\*const parent=nullptr\)](#)  
*This class extends QRunnable, so you have to reimplement virtual void [run\(\)](#).*
- [~DynamicThread \(\)](#) override  
*The destructor calls [stop\(\)](#) and [wait\(\)](#), but if you, in your destructor, delete any data that is accessed by your [run\(\)](#) method, you must call [stop\(\)](#) and [wait\(\)](#) before yourself.*
- bool [isFinished \(\)](#) const
- bool [isRunning \(\)](#) const
- [QThread::Priority priority \(\)](#) const
- void [setEmitSignals \(bool emitThem\)](#)
- void [setPriority \(QThread::Priority priority\)](#)  
*Sets the priority for this dynamic thread.*
- State [state \(\)](#) const

### Static Public Member Functions

- static int **CurrentVersion** ()
- static QString **DisplayName** ()
- static QString **FilterIdentifier** ()
- static QList< int > **SupportedVersions** ()

### Additional Inherited Members

### Public Types inherited from [Digikam::DynamicThread](#)

- enum **State** { **Inactive** , **Scheduled** , **Running** , **Deactivating** }

### Public Slots inherited from [Digikam::DynamicThread](#)

- void **start** ()
- void **stop** ()  
*Stop computation, sets the running flag to false.*
- void **wait** ()  
*Waits until the thread finishes.*

### Signals inherited from [Digikam::DImgThreadedFilter](#)

- void **finished** (bool success)  
*Emitted when the computation has completed.*
- void **progress** (int progress)  
*Emitted when progress info from the calculation is available.*
- void **started** ()  
*This signal is emitted when image data is available and the computation has started.*

### Signals inherited from [Digikam::DynamicThread](#)

- void **finished** ()
- void **starting** ()  
*Emitted if emitSignals is enabled.*

## Protected Member Functions inherited from [Digikam::DImgThreadedFilter](#)

- [DImgThreadedFilter](#) ([DImgThreadedFilter](#) \*const master, const [DImg](#) &orgImage, const [DImg](#) &destImage, int progressBegin=0, int progressEnd=100, const QString &name=QString())  
*Support for chaining two filters as master and thread.*
- virtual void [cleanupFilter](#) ()  
*Clean up filter data if necessary, called by stopComputation() method.*
- virtual void [initFilter](#) ()  
*Start filter operation before threaded method.*
- void [initMaster](#) ()
- void [initSlave](#) ([DImgThreadedFilter](#) \*const master, int progressBegin=0, int progressEnd=100)  
*Initialize the filter for use as a slave - reroutes progress info to master.*
- virtual int [modulateProgress](#) (int progress)  
*This method modulates the progress value from the 0..100 span to the span of this slave.*
- void [postProgress](#) (int progress)  
*Emit progress info.*
- virtual void [prepareDestImage](#) ()
- void [run](#) () override  
*List of threaded operations by filter.*
- void [setSlave](#) ([DImgThreadedFilter](#) \*const slave)  
*Inform the master that there is currently a slave.*

## Protected Member Functions inherited from [Digikam::DynamicThread](#)

- bool [runningFlag](#) () const volatile  
*In you run() method, you shall regularly check for runningFlag() and cleanup and return if false.*
- void [shutDown](#) ()  
*If you are deleting data in your destructor which is accessed from the thread, do one of the following from your destructor to guarantee a safe shutdown: 1) Call this method 2) Call stop() and wait(), knowing that nothing will call start() anymore after this 3) Be sure the thread will never be running at destruction.*
- void [start](#) (QMutexLocker< QMutex > &locker)  
*Doing the same as start(), stop() and wait above, provide it with a locked QMutexLocker on mutex().*
- void [stop](#) (const QMutexLocker< QMutex > &locker)
- QMutex \* [threadMutex](#) () const  
*This is the non-recursive mutex used to protect state variables and waiting in this class.*
- void [wait](#) (QMutexLocker< QMutex > &locker)

## Protected Attributes inherited from [Digikam::DImgThreadedFilter](#)

- [DImg](#) [m\\_destImage](#)  
*Output image data.*
- [DImgThreadedFilter](#) \* [m\\_master](#) = nullptr  
*The master of this slave filter.*
- QString [m\\_name](#)  
*Filter name.*
- [DImg](#) [m\\_orgImage](#)  
*Copy of original Image data.*
- int [m\\_progressBegin](#) = 0  
*The progress span that a slave filter uses in the parent filter's progress.*
- int [m\\_progressCurrent](#) = 0  
*To prevent signals bombarding with progress indicator value in postProgress().*
- int [m\\_progressSpan](#) = 0
- [DImgThreadedFilter](#) \* [m\\_slave](#) = nullptr  
*The current slave.*
- int [m\\_version](#) = 1
- bool [m\\_wasCancelled](#) = false

## 9.1015.1 Member Function Documentation

### 9.1015.1.1 filterAction()

`FilterAction` Digikam::NormalizeFilter::filterAction ( ) [override], [virtual]

Implements [Digikam::DImgThreadedFilter](#).

### 9.1015.1.2 filterIdentifier()

`QString` Digikam::NormalizeFilter::filterIdentifier ( ) const [inline], [override], [virtual]

Implements [Digikam::DImgThreadedFilter](#).

### 9.1015.1.3 readParameters()

```
void Digikam::NormalizeFilter::readParameters (
    const FilterAction & action ) [override], [virtual]
```

Implements [Digikam::DImgThreadedFilter](#).

## 9.1016 Digikam::NormalSearchTreeView Class Reference

Tree view for all saved "normal" searches.

Inheritance diagram for Digikam::NormalSearchTreeView:

## Signals

- void `copySearch` (SAlbum \*album)  
Emitted if the given search shall be copied.
- void `editSearch` (SAlbum \*album)  
Emitted if the given search shall be edited.
- void `newSearch` ()  
Emitted if a new search shall be created.

## Signals inherited from Digikam::AbstractAlbumTreeView

- void **currentAlbumChanged** ([Album](#) \*currentAlbum)  
*Emitted when the currently selected album changes.*
- void **selectedAlbumsChanged** (const [QList](#)< [Album](#) \* > &selectedAlbums)  
*Emitted when the current selection changes.*

## Public Member Functions

- [NormalSearchTreeView](#) ([QWidget](#) \*const parent, [searchModel](#) \*const searchModel, [SearchModificationHelper](#) \*const searchModificationHelper)  
*Constructor.*
- ~[NormalSearchTreeView](#) () override  
*Destructor.*

## Public Member Functions inherited from Digikam::EditableSearchTreeView

- [EditableSearchTreeView](#) ([QWidget](#) \*const parent, [searchModel](#) \*const searchModel, [SearchModificationHelper](#) \*const searchModificationHelper)  
*Constructor.*

*Destructor.*

## Public Member Functions inherited from Digikam::SearchTreeView

- [SearchTreeView](#) ([QWidget](#) \*const parent=nullptr, [Flags](#) flags=DefaultFlags)
- [searchModel](#) \* **albumModel** () const  
*Note: not filtered by search type.*
- [SAlbum](#) \* **currentAlbum** () const
- [SearchFilterModel](#) \* **filteredModel** () const  
*Contains only the searches with appropriate type - prefer to albumModel()*
- void **setAlbumFilterModel** ([SearchFilterModel](#) \*const filteredModel, [CheckableAlbumFilterModel](#) \*const model)
- void **setAlbumModel** ([searchModel](#) \*const model)

## Public Member Functions inherited from Digikam::AbstractCheckableAlbumTreeView

- [AbstractCheckableAlbumTreeView](#) ([QWidget](#) \*const parent, [Flags](#) flags)  
*Models of these view can be checkable, they need not.*
- [CheckableAlbumFilterModel](#) \* **albumFilterModel** () const
- [AbstractCheckableAlbumModel](#) \* **albumModel** () const  
*Manage check state through the model directly.*
- [CheckableAlbumFilterModel](#) \* **checkableAlbumFilterModel** () const
- [AbstractCheckableAlbumModel](#) \* **checkableModel** () const
- void **doLoadState** () override  
*Implements state loading for the album tree view in a somewhat clumsy procedure because the model may not be fully loaded when this method is called.*
- void **doSaveState** () override  
*Implement this hook method for state saving.*
- bool **isRestoreCheckState** () const  
*Tells if the check state is restored while loading / saving state.*
- void **setCheckOnMiddleClick** (bool doThat)  
*Enable checking on middle mouse button click (default: on).*
- void **setRestoreCheckState** (bool restore)  
*Set whether to restore check state or not.*

## Public Member Functions inherited from [Digikam::AbstractCountingAlbumTreeView](#)

- **AbstractCountingAlbumTreeView** (QWidget \*const parent, Flags flags)

## Public Member Functions inherited from [Digikam::AbstractAlbumTreeView](#)

- [AbstractAlbumTreeView](#) (QWidget \*const parent, Flags flags)  
*Constructs an album tree view.*
- void **addContextMenuElement** ([ContextMenuElement](#) \*const element)
- [AlbumFilterModel](#) \* **albumFilterModel** () const
- [AbstractSpecificAlbumModel](#) \* **albumModel** () const
- QList< [ContextMenuElement](#) \* > **contextMenuElements** () const
- template<class A >  
QList< A \* > **currentAlbums** ()
- bool **expandMatches** (const QModelIndex &index)  
*Ensures that every current match is visible by expanding all parent entries.*
- QModelIndex **indexVisuallyAt** (const QPoint &p)  
*This is a combination of `indexAt()` checked with `visualRect()`.*
- void **removeContextMenuElement** ([ContextMenuElement](#) \*const element)
- QList< [Album](#) \* > **selectedItems** ()  
*selectedItems()* -
- void **setAlbumManagerCurrentAlbum** (const bool setCurrentAlbum)  
*Some treeviews shall control the global current album kept by `AlbumManager`.*
- void **setContextMenuIcon** (const QPixmap &pixmap)  
*Set the context menu title and icon.*
- void **setContextMenuTitle** (const QString &title)
- void **setEnabledContextMenu** (const bool enable)  
*Determines the global decision to show a popup menu or not.*
- void **setExpandNewCurrentItem** (const bool doThat)  
*Expand an item when making it the new current item.*
- void **setExpandOnSingleClick** (const bool doThat)  
*Enable expanding of tree items on single click on the item (default: off)*
- void **setSelectAlbumOnClick** (const bool selectOnClick)  
*Sets whether to select an album on click via the album manager or not.*
- void **setSelectOnContextMenu** (const bool select)  
*Sets whether to select the album under the mouse cursor on a context menu request (so that the album is shown using the album manager) or not.*
- bool **viewportEvent** (QEvent \*event) override  
*For internal use only.*

## Public Member Functions inherited from [Digikam::StateSavingObject](#)

- [StateSavingObject](#) (QObject \*const host)  
*Constructor.*
- virtual ~**StateSavingObject** ()  
*Destructor.*
- [StateSavingDepth](#) **getStateSavingDepth** () const  
*Returns the depth used for state saving or loading.*
- void **loadState** ()  
*Invokes loading the class' state.*

- void **saveState** ()  
*Invokes saving the class' state.*
- virtual void **setConfigGroup** (const KConfigGroup &group)  
*Sets a dedicated config group that will be used to store and reload the state from.*
- virtual void **setEntryPrefix** (const QString &prefix)  
*Define a prefix that will be used for every entry in the config group.*
- void **setStateSavingDepth** (const [StateSavingDepth](#) depth)  
*Sets the depth used for state saving or loading.*

### Protected Member Functions

- void **addCustomContextMenuActions** ([ContextMenuHelper](#) &cmh, [Album](#) \*album) override  
*Adds actions to delete or rename existing searches.*
- void **handleCustomContextMenuAction** (QAction \*action, const [AlbumPointer](#)< [Album](#) > &album) override  
*Handles deletion and renaming actions.*

### Protected Member Functions inherited from [Digikam::EditableSearchTreeView](#)

- QString **contextMenuTitle** () const override  
*implemented hook methods for context menus.*

### Protected Member Functions inherited from [Digikam::AbstractCheckableAlbumTreeView](#)

- void **middleButtonPressed** ([Album](#) \*a) override
- void **rowsInserted** (const QModelIndex &parent, int start, int end) override
- void **setAlbumFilterModel** ([CheckableAlbumFilterModel](#) \*const filterModel)
- void **setAlbumModel** ([AbstractCheckableAlbumModel](#) \*const model)

### Protected Member Functions inherited from [Digikam::AbstractCountingAlbumTreeView](#)

- void **rowsInserted** (const QModelIndex &parent, int start, int end) override
- void **setAlbumFilterModel** ([AlbumFilterModel](#) \*const filterModel)
- void **setAlbumModel** ([AbstractCountingAlbumModel](#) \*const model)

### Protected Member Functions inherited from [Digikam::AbstractAlbumTreeView](#)

- virtual QPixmap **contextMenuIcon** () const  
*Hook method that can be implemented to return a special icon used for the context menu.*
- void **dragEnterEvent** (QDragEnterEvent \*e) override
- void **dragLeaveEvent** (QDragLeaveEvent \*e) override
- void **dragMoveEvent** (QDragMoveEvent \*e) override
- void **dropEvent** (QDropEvent \*e) override
- void **mousePressEvent** (QMouseEvent \*e) override  
*Other helper methods.*
- virtual QPixmap  **pixmapForDrag** (const QStyleOptionViewItem &option, QList< QModelIndex > indexes)  
*TODO: Move to delegate, when we have one.*
- void **rowsAboutToBeRemoved** (const QModelIndex &parent, int start, int end) override
- void **rowsInserted** (const QModelIndex &index, int start, int end) override
- void **setAlbumFilterModel** ([AlbumFilterModel](#) \*const filterModel)
- void **setAlbumModel** ([AbstractSpecificAlbumModel](#) \*const model)
- virtual bool **showContextMenuAt** (QContextMenuEvent \*event, [Album](#) \*albumForEvent)  
*Hook method to implement that determines if a context menu shall be displayed for the given event at the position coded in the event.*
- void **startDrag** (Qt::DropActions supportedActions) override

## Protected Member Functions inherited from [Digikam::StateSavingObject](#)

- QString [entryName](#) (const QString &base) const  
*Always use this method to create config group entry names.*
- KConfigGroup [getConfigGroup](#) () const  
*Returns the config group that must be used for state saving and loading.*

## Additional Inherited Members

## Public Types inherited from [Digikam::AbstractAlbumTreeView](#)

- enum [Flag](#) {  
[CreateDefaultModel](#) , [CreateDefaultFilterModel](#) , [CreateDefaultDelegate](#) , [ShowCountAccordingToSettings](#) ,  
[AlwaysShowInclusiveCounts](#) , **DefaultFlags** = [CreateDefaultFilterModel](#) | [CreateDefaultDelegate](#) | Show↔  
CountAccordingToSettings }
- typedef QFlags< [Flag](#) > **Flags**

## Public Types inherited from [Digikam::StateSavingObject](#)

- enum [StateSavingDepth](#) { [INSTANCE](#) , [DIRECT\\_CHILDREN](#) , [RECURSIVE](#) }  
*This enum defines the "depth" of the [StateSavingObject::loadState\(\)](#) and [StateSavingObject::saveState\(\)](#) methods.*

## Public Slots inherited from [Digikam::SearchTreeView](#)

- void [setCurrentAlbum](#) (int searchId, bool selectInAlbumManager=true)
- void [setCurrentAlbums](#) (const QList< [Album](#) \* > &albums, bool selectInAlbumManager=true)

## Public Slots inherited from [Digikam::AbstractAlbumTreeView](#)

- void [adaptColumnsToContent](#) ()  
*Adapt the column sizes to the contents of the tree view.*
- void [expandEverything](#) (const QModelIndex &index)  
*Expands the complete tree under the given index.*
- void [scrollToSelectedAlbum](#) ()  
*Scrolls to the first selected album if there is one.*
- void [setCurrentAlbums](#) (const QList< [Album](#) \* > &albums, bool selectInAlbumManager=true)  
*Selects the given album.*
- void [setSearchTextSettings](#) (const [SearchTextSettings](#) &settings)
- void [slotCollapseAllNodes](#) ()  
*slotCollapseAllNodes - collapse all nodes without root node*
- void [slotCollapseNode](#) ()  
*slotCollapseNode - collapse recursively selected nodes*
- void [slotExpandNode](#) ()  
*slotExpandNode - expands recursively selected nodes*

## Protected Slots inherited from [Digikam::AbstractAlbumTreeView](#)

### 9.1016.1 Detailed Description

Allows editing and creating searches in the context menu.

Author

jwienke

### 9.1016.2 Constructor & Destructor Documentation

#### 9.1016.2.1 NormalSearchTreeView()

```
Digikam::NormalSearchTreeView::NormalSearchTreeView (
    QWidget *const parent,
    SearchModel *const searchModel,
    SearchModificationHelper *const searchModificationHelper )
```

Parameters

<i>parent</i>	qt parent
<i>searchModel</i>	the model this view should act on
<i>searchModificationHelper</i>	the modification helper object used to perform operations on the displayed searches

### 9.1016.3 Member Function Documentation

#### 9.1016.3.1 addCustomContextMenuActions()

```
void Digikam::NormalSearchTreeView::addCustomContextMenuActions (
    ContextMenuHelper & cmh,
    Album * album ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::EditableSearchTreeView](#).

#### 9.1016.3.2 copySearch

```
void Digikam::NormalSearchTreeView::copySearch (
    SAlbum * album ) [signal]
```

##### Parameters

<i>album</i>	search to copy
--------------	----------------

#### 9.1016.3.3 editSearch

```
void Digikam::NormalSearchTreeView::editSearch (
    SAlbum * album ) [signal]
```

##### Parameters

<i>album</i>	search to edit
--------------	----------------

#### 9.1016.3.4 handleCustomContextMenuAction()

```
void Digikam::NormalSearchTreeView::handleCustomContextMenuAction (
    QAction * action,
    const AlbumPointer< Album > & album ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::EditableSearchTreeView](#).

## 9.1017 Digikam::NRContainer Class Reference

### Public Attributes

- double **softness** [3] = { 0.9 }  
*Y, Cb, Cr softness.*
- double **thresholds** [3] = { 1.2 }  
*Separated values per channel.*

## 9.1017.1 Member Data Documentation

### 9.1017.1.1 thresholds

```
double Digikam::NRContainer::thresholds[3] = { 1.2 }
```

Y, Cb, Cr thresholds.

## 9.1018 Digikam::NREstimate Class Reference

Inheritance diagram for Digikam::NREstimate:

### Public Member Functions

- **NREstimate** (`Dimg *const img`, `QObject *const parent=nullptr`)

*Standard constructor with image container to parse.*

- void [setLogFilesPath](#) (const QString &path)  
*To set image path where log files will be created to host computation algorithm results, for hacking purpose.*
- [NRContainer settings](#) () const  
*Return all Wavelets noise reduction settings computed by image analys.*
- void [startAnalyse](#) () override  
*Perform estimate noise.*

### Public Member Functions inherited from [Digikam::DImgThreadedAnalyser](#)

- [DImgThreadedAnalyser](#) (DImg \*const orgImage, QObject \*const parent=nullptr, const QString &name=QString())  
*Constructs an image analyser with all arguments (ready to use).*
- [DImgThreadedAnalyser](#) (QObject \*const parent=nullptr, const QString &name=QString())  
*Constructs a filter without argument.*

### Public Member Functions inherited from [Digikam::DImgThreadedFilter](#)

- [DImgThreadedFilter](#) (DImg \*const orgImage, QObject \*const parent, const QString &name=QString())  
*Constructs a filter with all arguments (ready to use).*
- [DImgThreadedFilter](#) (QObject \*const parent=nullptr, const QString &name=QString())  
*Constructs a filter without argument.*
- virtual void [cancelFilter](#) ()  
*Cancel the threaded computation.*
- const QString & [filterName](#) ()
- int [filterVersion](#) () const
- [DImg](#) [getTargetImage](#) ()
- QList< int > [multithreadedSteps](#) (int stop, int start=0) const  
*This method return a list of steps to process parallelized operation in filter using QtConcurrents API.*
- virtual bool [parametersSuccessfullyRead](#) () const  
*Optional: error handling for readParameters.*
- virtual QString [readParametersError](#) (const [FilterAction](#) &actionThatFailed) const
- void [setFilterName](#) (const QString &name)
- void [setFilterVersion](#) (int version)  
*Replaying a filter action: Set the filter version.*
- void [setOriginalImage](#) (const [DImg](#) &orgImage)
- void [setupAndStartDirectly](#) (const [DImg](#) &orgImage, [DImgThreadedFilter](#) \*const master, int progress←Begin=0, int progressEnd=100)  
*Initializes the filter for use as a slave and directly starts computation (in-thread)*
- void [setupFilter](#) (const [DImg](#) &orgImage)  
*You need to call this and then start filter of you used the constructor not setting an original image.*
- virtual void [startFilter](#) ()  
*Start the threaded computation.*
- virtual void [startFilterDirectly](#) ()  
*Start computation of this filter, directly in this thread.*

## Public Member Functions inherited from [Digikam::DynamicThread](#)

- [DynamicThread](#) (QObject \*const parent=nullptr)
 

*This class extends QRunnable, so you have to reimplement virtual void [run\(\)](#).*
- [~DynamicThread](#) () override
 

*The destructor calls [stop\(\)](#) and [wait\(\)](#), but if you, in your destructor, delete any data that is accessed by your [run\(\)](#) method, you must call [stop\(\)](#) and [wait\(\)](#) before yourself.*
- bool [isFinished](#) () const
- bool [isRunning](#) () const
- QThread::Priority [priority](#) () const
- void [setEmitSignals](#) (bool emitThem)
- void [setPriority](#) (QThread::Priority priority)
 

*Sets the priority for this dynamic thread.*
- State [state](#) () const

## Additional Inherited Members

## Public Types inherited from [Digikam::DynamicThread](#)

- enum [State](#) { [Inactive](#) , [Scheduled](#) , [Running](#) , [Deactivating](#) }

## Public Slots inherited from [Digikam::DynamicThread](#)

- void [start](#) ()
- void [stop](#) ()
 

*Stop computation, sets the running flag to false.*
- void [wait](#) ()
 

*Waits until the thread finishes.*

## Signals inherited from [Digikam::DImgThreadedFilter](#)

- void [finished](#) (bool success)
 

*Emitted when the computation has completed.*
- void [progress](#) (int progress)
 

*Emitted when progress info from the calculation is available.*
- void [started](#) ()
 

*This signal is emitted when image data is available and the computation has started.*

## Signals inherited from [Digikam::DynamicThread](#)

- void [finished](#) ()
- void [starting](#) ()
 

*Emitted if emitSignals is enabled.*

## Protected Member Functions inherited from Digikam::DImgThreadedFilter

- [DImgThreadedFilter](#) ([DImgThreadedFilter](#) \*const master, const [DImg](#) &orgImage, const [DImg](#) &destImage, int progressBegin=0, int progressEnd=100, const QString &name=QString())  
*Support for chaining two filters as master and thread.*
- virtual void [cleanupFilter](#) ()  
*Clean up filter data if necessary, called by stopComputation() method.*
- virtual void [initFilter](#) ()  
*Start filter operation before threaded method.*
- void [initMaster](#) ()
- void [initSlave](#) ([DImgThreadedFilter](#) \*const master, int progressBegin=0, int progressEnd=100)  
*Initialize the filter for use as a slave - reroutes progress info to master.*
- virtual int [modulateProgress](#) (int progress)  
*This method modulates the progress value from the 0..100 span to the span of this slave.*
- void [postProgress](#) (int progress)  
*Emit progress info.*
- void [run](#) () override  
*List of threaded operations by filter.*
- void [setSlave](#) ([DImgThreadedFilter](#) \*const slave)  
*Inform the master that there is currently a slave.*

## Protected Member Functions inherited from Digikam::DynamicThread

- bool [runningFlag](#) () const volatile  
*In you run() method, you shall regularly check for runningFlag() and cleanup and return if false.*
- void [shutDown](#) ()  
*If you are deleting data in your destructor which is accessed from the thread, do one of the following from your destructor to guarantee a safe shutdown: 1) Call this method 2) Call stop() and wait(), knowing that nothing will call start() anymore after this 3) Be sure the thread will never be running at destruction.*
- void [start](#) (QMutexLocker< QMutex > &locker)  
*Doing the same as start(), stop() and wait above, provide it with a locked QMutexLocker on mutex().*
- void [stop](#) (const QMutexLocker< QMutex > &locker)
- QMutex \* [threadMutex](#) () const  
*This is the non-recursive mutex used to protect state variables and waiting in this class.*
- void [wait](#) (QMutexLocker< QMutex > &locker)

## Protected Attributes inherited from Digikam::DImgThreadedFilter

- [DImg](#) [m\\_destImage](#)  
*Output image data.*
- [DImgThreadedFilter](#) \* [m\\_master](#) = nullptr  
*The master of this slave filter.*
- QString [m\\_name](#)  
*Filter name.*
- [DImg](#) [m\\_orgImage](#)  
*Copy of original Image data.*
- int [m\\_progressBegin](#) = 0  
*The progress span that a slave filter uses in the parent filter's progress.*
- int [m\\_progressCurrent](#) = 0  
*To prevent signals bombarding with progress indicator value in postProgress().*
- int [m\\_progressSpan](#) = 0
- [DImgThreadedFilter](#) \* [m\\_slave](#) = nullptr  
*The current slave.*
- int [m\\_version](#) = 1
- bool [m\\_wasCancelled](#) = false

## 9.1018.1 Member Function Documentation

### 9.1018.1.1 setLogFilePath()

```
void Digikam::NREstimate::setLogFilePath (
    const QString & path )
```

If path is not set, no log files will be created.

### 9.1018.1.2 startAnalyse()

```
void Digikam::NREstimate::startAnalyse ( ) [override], [virtual]
```

Implements [Digikam::DImgThreadedAnalyser](#).

## 9.1019 Digikam::NRFilter Class Reference

Inheritance diagram for Digikam::NRFilter:

### Public Member Functions

- bool [m\\_wasCancelled](#) = false

## 9.1021.1 Member Function Documentation

### 9.1021.1.1 filterAction()

`FilterAction` Digikam::OilPaintFilter::filterAction ( ) [override], [virtual]

Implements [Digikam::DImgThreadedFilter](#).

### 9.1021.1.2 filterIdentifier()

`QString` Digikam::OilPaintFilter::filterIdentifier ( ) const [inline], [override], [virtual]

Implements [Digikam::DImgThreadedFilter](#).

### 9.1021.1.3 readParameters()

```
void Digikam::OilPaintFilter::readParameters (
    const FilterAction & action ) [override], [virtual]
```

Implements [Digikam::DImgThreadedFilter](#).

## 9.1022 Digikam::OnlineVersionChecker Class Reference

Inheritance diagram for Digikam::OnlineVersionChecker:

## Signals

- void **signalNewVersionAvailable** (const QString &version)
- void **signalNewVersionCheckError** (const QString &error)

## Public Member Functions

- **OnlineVersionChecker** (QObject \*const parent, bool checkPreRelease=false)
- void **cancelCheck** ()
- void **checkForNewVersion** ()
- QString **preReleaseFileName** () const
- void **setCurrentBuildDate** (const QDateTime &dt)
- void **setCurrentVersion** (const QString &version)

## Static Public Member Functions

- static bool **bundleProperties** (QString &arch, QString &ext, QString &qtVersion, QString &dir)  
*Return true if the system and architecture are supported by the bundle workflow.*
- static QString **lastCheckDate** ()  
*Return the last date as string when have been performed a check for new version.*

## 9.1022.1 Member Function Documentation

### 9.1022.1.1 bundleProperties()

```
bool Digikam::OnlineVersionChecker::bundleProperties (
    QString & arch,
    QString & ext,
    QString & qtVersion,
    QString & dir ) [static]
```

'arch' is the relevant prefix for the bundle architecture. 'ext' is the relevant bundle file extension. 'qtVersion' is the relevant version of Qt used in the bundle file-name. 'dir' is the subdirectory if any to get the bundle file.

## 9.1023 Digikam::OnlineVersionDlg Class Reference

Inheritance diagram for Digikam::OnlineVersionDlg:

### Signals

- void **signalSetupUpdate** ()

### Public Member Functions

- **OnlineVersionDlg** (QWidget \*const parent=nullptr, const QString &version=QLatin1String(digikam\_↵  
version\_short), const QDateTime &buildDt=digiKamBuildDate(), bool checkPreRelease=false, bool update↵  
WithDebug=false)

## 9.1024 Digikam::OnlineVersionDwnl Class Reference

Inheritance diagram for Digikam::OnlineVersionDwnl:

### Signals

- void **signalDownloadError** (const QString &error)
- void **signalDownloadProgress** (qint64 bytesReceived, qint64 bytesTotal)

### Public Member Functions

- **OnlineVersionDwnl** (QObject \*const parent=nullptr, bool checkPreRelease=false, bool updateWithDebug=false)
- void **cancelDownload** ()
- QString **downloadedPath** () const
- QString **downloadUrl** () const
- void **startDownload** (const QString &version)

## 9.1025 Digikam::OpenCVDNNFaceDetector Class Reference

### Public Member Functions

- **OpenCVDNNFaceDetector** ([DetectorNNModel](#) model=[DetectorNNModel::DNNDetectorYuNet](#))
- std::vector< cv::Rect > **cvDetectFaces** (const cv::Mat &inputImage, const cv::Size &paddedSize)
- QList< QRect > **detectFaces** (const cv::Mat &inputImage, const cv::Size &paddedSize)

*There is no proof that doing this will help, since face can be detected at various positions (even half, masked faces can be detected), not only frontal.*

- cv::Mat **prepareForDetection** (const [DImg](#) &inputImage, cv::Size &paddedSize) const
- cv::Mat **prepareForDetection** (const QImage &inputImage, cv::Size &paddedSize) const
- cv::Mat **prepareForDetection** (const QString &inputImagePath, cv::Size &paddedSize) const
- cv::Mat **prepareForDetectionYuNet** (cv::Mat &cvImage, cv::Size &paddedSize) const
- void **setAccuracy** (const int accuracy)
- void **setFaceDetectionSize** ([FaceScanSettings::FaceDetectionSize](#) size)

### Static Public Member Functions

- static int [recommendedImageSizeForDetection](#) ()  
*Returns the image size (one dimension).*

## 9.1025.1 Member Function Documentation

### 9.1025.1.1 detectFaces()

```
QList< QRect > Digikam::OpenCVDNNFaceDetector::detectFaces (
    const cv::Mat & inputImage,
    const cv::Size & paddedSize )
```

Effort on doing this should be questioned. TODO: Restructure and improve Face Detection module.

void OpenCVDNNFaceDetector::resizeBboxToStandardHumanFace(int& width, int& height) { Human head sizes data. [https://en.wikipedia.org/wiki/Human\\_head#Average\\_head\\_sizes](https://en.wikipedia.org/wiki/Human_head#Average_head_sizes)

```
float maxRatioFrontalFace    = 15.4 / 15.5;
float minRatioNonFrontalFace = 8.6  / 21.6;

float r = width*1.0/height, rReference;

if      ((r >= minRatioNonFrontalFace*0.9) && r <= (maxRatioFrontalFace * 1.1))
{
    rReference = r;
}
else if (r <= 0.25)
{
    rReference = r * 1.5;
}
else if (r >= 4)
{
    rReference = r / 1.5;
}
else if (r < minRatioNonFrontalFace * 0.9)
{
    rReference = minRatioNonFrontalFace;
}
else if (r > maxRatioFrontalFace * 1.1)
{
    rReference = maxRatioFrontalFace;
}

if (width > height)
{
    height = width / rReference;
}
else
{
    width = height * rReference;
}

}
```

### 9.1025.1.2 recommendedImageSizeForDetection()

```
int Digikam::OpenCVDNNFaceDetector::recommendedImageSizeForDetection ( ) [static]
```

recommended for face detection. If the image is considerably larger, it will be rescaled automatically.

## 9.1026 Digikam::OpenCVDNNFaceRecognizer Class Reference

### Public Types

- enum [Classifier](#) { [SVM](#) = 0 , [OpenCV\\_KNN](#) , [Tree](#) , [DB](#) }

### Public Member Functions

- **OpenCVDNNFaceRecognizer** ([Classifier](#) method, [FaceScanSettings::FaceRecognitionModel](#) recModel)  
*OpenCVDNNFaceRecognizer: Master class to control entire recognition using OpenFace algorithm.*
- void **clearTraining** (const QList< int > &idsToClear)  
*Clear specified trained data.*
- QVector< int > **recognize** (const QList< QPair< QImage \*, QString > > &inputImages)  
*Try to recognize a list of given images.*
- int **recognize** (const QPair< QImage \*, QString > &inputImage)  
*Try to recognize the given image.*
- bool **registerTrainingData** (const cv::Mat &preprocessedImage, int label)  
*register training data for unit test.*
- bool **remove** (const QString &hash)  
*Returns a cvMat of the extracted features from the cvinputImage, optimized for recognition.*
- void **setNbNeighbors** (int k)  
*Set K parameter of K-Nearest neighbors algorithm.*
- void **setThreshold** (int threshold)  
*Set maximum square distance of 2 vectors.*
- void **train** (const QList< QPair< QImage \*, QString > > &images, const int label)  
*Register faces corresponding to an identity.*
- int **verifyTestData** (const cv::Mat &preprocessedImage)  
*predict label of test data for unit test.*

### Static Public Member Functions

- static cv::Mat **prepareForRecognition** (const cv::Mat &cvinputImage)  
*Returns a cvMat created from the cvinputImage, optimized for recognition.*
- static cv::Mat **prepareForRecognition** (QImage &inputImage)  
*Returns a cvMat created from the inputImage, optimized for recognition.*

## 9.1026.1 Member Enumeration Documentation

### 9.1026.1.1 Classifier

```
enum Digikam::OpenCVDNNFaceRecognizer::Classifier
```

## Enumerator

SVM	Support Vector Machines ( <a href="https://docs.opencv.org/4.x/dc/dd6/ml_intro.html#ml_intro_svm">https://docs.opencv.org/4.x/dc/dd6/ml_intro.html#ml_intro_svm</a> )
OpenCV_KNN	K-Nearest Neighbors ( <a href="https://docs.opencv.org/4.x/dc/dd6/ml_intro.html#ml_intro_knn">https://docs.opencv.org/4.x/dc/dd6/ml_intro.html#ml_intro_knn</a> )
Tree	K-Nearest Neighbors Tree ( <a href="https://en.wikipedia.org/wiki/K-nearest_neighbors_algorithm">https://en.wikipedia.org/wiki/K-nearest_neighbors_algorithm</a> )
DB	Closest Neighbors Tree from the database.

## 9.1026.2 Member Function Documentation

### 9.1026.2.1 recognize() [1/2]

```
QVector< int > Digikam::OpenCVDNNFaceRecognizer::recognize (
    const QList< QPair< QImage *, QString > > & inputImages )
```

Returns a list of identity ids. If an identity cannot be recognized, returns -1.

### 9.1026.2.2 recognize() [2/2]

```
int Digikam::OpenCVDNNFaceRecognizer::recognize (
    const QPair< QImage *, QString > & inputImage )
```

Returns the identity id. If the identity cannot be recognized, returns -1. TODO: verify workflow to economize this routine.

## 9.1027 Digikam::OpenfacePreprocessor Class Reference

### Public Member Functions

- bool **loadModels** ()  
*Load shapepredictor model for face alignment with 68 points of face landmark extraction.*
- cv::Mat **process** (const cv::Mat &image)

- void [removeChild](#) ([Album](#) \*const [child](#))
- void [setParent](#) ([Album](#) \*const [parent](#))
- void [setTitle](#) (const QString &[title](#))

## 9.1032.1 Member Function Documentation

### 9.1032.1.1 [databaseUrl\(\)](#)

`CoreDbUrl` [Digikam::PAlbum::databaseUrl](#) ( ) const [override], [virtual]

#### Returns

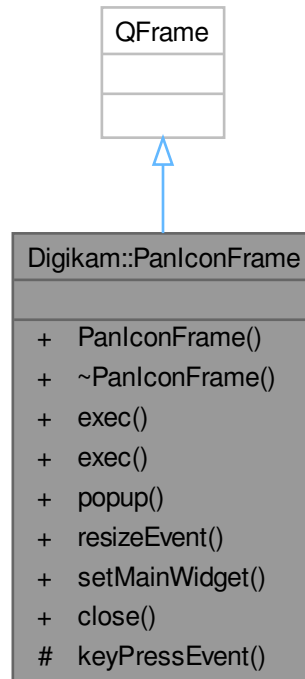

the kde url of the album

Implements [Digikam::Album](#).

## 9.1033 Digikam::PanIconFrame Class Reference

Frame with popup menu behavior to host [PanIconWidget](#).

Inheritance diagram for Digikam::PanIconFrame:

### Public Slots

- void `close` (int r)  
*Close the popup window.*

### Signals

- void `leaveModality` ()

### Public Member Functions

- **PanIconFrame** (QWidget \*const parent=nullptr)
- int **exec** (const QPoint &pos)  
*Execute the popup window.*
- int **exec** (int x, int y)  
*Execute the popup window.*
- void **popup** (const QPoint &pos)  
*Open the popup window at position pos.*
- void **resizeEvent** (QResizeEvent \*resize) override  
*The resize event.*
- void **setMainWidget** (QWidget \*const main)  
*Set the main widget.*

## Protected Member Functions

- void **keyPressEvent** (QKeyEvent \*e) override  
*Catch key press events.*

## Friends

- class **Private**

## 9.1033.1 Member Function Documentation

### 9.1033.1.1 close

```
void Digikam::PanIconFrame::close (
    int r ) [slot]
```

This is called from the main widget, usually. `r` is the result returned from [exec\(\)](#).

### 9.1033.1.2 resizeEvent()

```
void Digikam::PanIconFrame::resizeEvent (
    QResizeEvent * resize ) [override]
```

Simply resizes the main widget to the whole widgets client size.

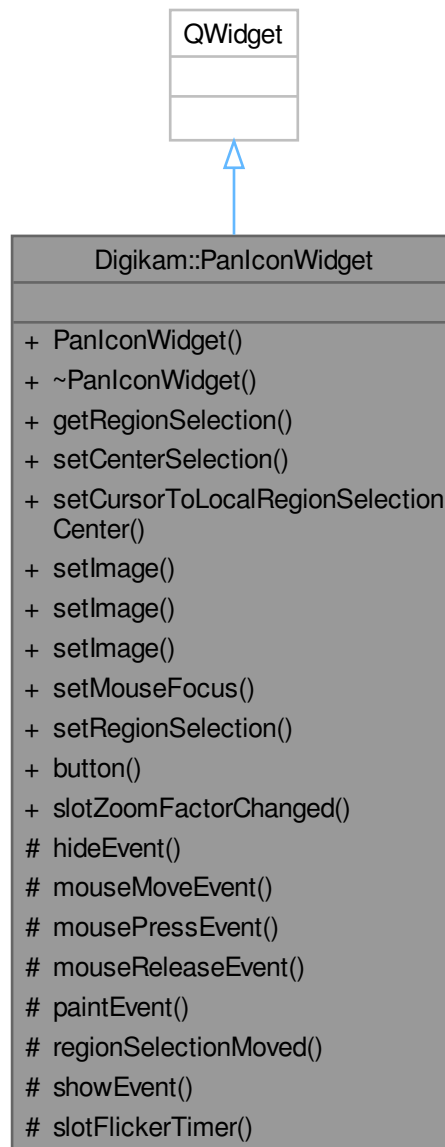

### 9.1033.1.3 setMainWidget()

```
void Digikam::PanIconFrame::setMainWidget (
    QWidget *const main )
```

You cannot set the main widget from the constructor, since it must be a child of the frame itself. Be careful: the size is set to the main widgets size. It is up to you to set the main widgets correct size before setting it as the main widget.

## 9.1034 Digikam::PanIconWidget Class Reference

Inheritance diagram for Digikam::PanIconWidget:

### Public Slots

- void **slotZoomFactorChanged** (double)

### Signals

- void **signalHidden** ()
- void **signalSelectionMoved** (const QRect &rect, bool targetDone)  
*Emitted when selection have been moved with mouse.*
- void **signalSelectionTakeFocus** ()

## Public Member Functions

- **PanIconWidget** (QWidget \*const parent=nullptr)
- QRect **getRegionSelection** () const
- void **setCenterSelection** ()
- void **setCursorToLocalRegionSelectionCenter** ()
- void **setImage** (const QImage &scaledPreviewImage, const QSize &fullImageSize)
- void **setImage** (int previewWidth, int previewHeight, const QImage &fullOriginalImage)
- void **setImage** (int previewWidth, int previewHeight, const QImage &fullOriginalImage)
- void **setMouseFocus** ()
- void **setRegionSelection** (const QRect &regionSelection)

## Static Public Member Functions

- static QPushButton \* **button** ()

## Protected Slots

- void **slotFlickerTimer** ()

## Protected Member Functions

- void **hideEvent** (QHideEvent \*) override
- void **mouseMoveEvent** (QMouseEvent \*) override
- void **mousePressEvent** (QMouseEvent \*) override
- void **mouseReleaseEvent** (QMouseEvent \*) override
- void **paintEvent** (QPaintEvent \*) override
- void **regionSelectionMoved** (bool targetDone)
  - Recalculate the target selection position and emit 'signalSelectionMoved'.*
- void **showEvent** (QShowEvent \*) override

## 9.1034.1 Member Function Documentation

### 9.1034.1.1 signalSelectionMoved

```
void Digikam::PanIconWidget::signalSelectionMoved (
    const QRect & rect,
    bool targetDone ) [signal]
```

'targetDone' boolean value is used for indicate if the mouse have been released.

## 9.1035 Digikam::ParallelAdapter< A > Class Template Reference

Inheritance diagram for Digikam::ParallelAdapter< A >:

### 9.1035.1 Constructor & Destructor Documentation

#### 9.1035.1.1 ParallelAdapter()

```
template<class A >
Digikam::ParallelAdapter< A >::ParallelAdapter ( ) [default]
```

The load will be evenly distributed. Note: unlike with [WorkerObject](#) directly, there is no need to call `schedule()`. For inbound connections (signals connected to a [WorkerObject](#)'s slot, to be processed, use a `Qt::DirectConnection` on the adapter. For outbound connections (signals emitted from the [WorkerObject](#)), use [ParallelAdapter](#)'s `connect` to have a connection from all added [WorkerObjects](#).

### 9.1035.2 Member Function Documentation

#### 9.1035.2.1 asQObject()

```
template<class A >
QObject * Digikam::ParallelAdapter< A >::asQObject ( ) [inline], [override], [virtual]
```

Implements [Digikam::ParallelWorkers](#).

#### 9.1035.2.2 mocMetaObject()

```
template<class A >
const QMetaObject * Digikam::ParallelAdapter< A >::mocMetaObject ( ) const [inline], [override], [virtual]
```

Implements [Digikam::ParallelWorkers](#).

#### 9.1035.2.3 staticMetacallPointer()

```
template<class A >
StaticMetacallFunction Digikam::ParallelAdapter< A >::staticMetacallPointer ( ) [inline], [override], [virtual]
```

Implements [Digikam::ParallelWorkers](#).

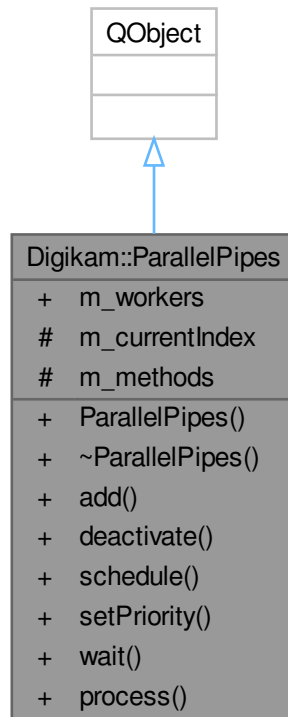

### 9.1035.2.4 WorkerObjectQtMetacall()

```
template<class A >
int Digikam::ParallelAdapter< A >::WorkerObjectQtMetacall (
    QMetaObject::Call _c,
    int _id,
    void ** _a ) [inline], [override], [virtual]
```

Implements [Digikam::ParallelWorkers](#).

## 9.1036 Digikam::ParallelPipes Class Reference

Inheritance diagram for Digikam::ParallelPipes:

### Public Slots

- void **process** (const FacePipelineExtendedPackage::Ptr &package)

### Signals

- void **processed** (const FacePipelineExtendedPackage::Ptr &package)

### Public Member Functions

- void **add** ([WorkerObject](#) \*const worker)
- void **deactivate** ([WorkerObject::DeactivatingMode](#) mode=[WorkerObject::FlushSignals](#))
- void **schedule** ()
- void **setPriority** (QThread::Priority priority)
- void **wait** ()

### Public Attributes

- QList< [WorkerObject](#) \* > **m\_workers**

### Protected Attributes

- int **m\_currentIndex** = 0
- QList< QMetaMethod > **m\_methods**

## 9.1037 Digikam::ParallelWorkers Class Reference

Inheritance diagram for Digikam::ParallelWorkers:

### Public Member Functions

- [ParallelWorkers](#) ()=default

*ParallelWorkers* is a helper class to distribute work over several identical workers objects.

- bool **connect** (const char \*signal, const QObject \*receiver, const char \*method, Qt::ConnectionType type=Qt::AutoConnection) const  
*Connects signals outbound from all workers to a given receiver.*
- void **deactivate** ([WorkerObject::DeactivatingMode](#) mode=[WorkerObject::FlushSignals](#))
- bool **optimalWorkerCountReached** () const  
*Returns true if the current number of added workers has reached the [optimalWorkerCount\(\)](#)*
- void **schedule** ()  
*The corresponding methods of all added worker objects will be called.*
- void **setPriority** (QThread::Priority priority)
- void **wait** ()

### Static Public Member Functions

- static int **optimalWorkerCount** ()  
*Regarding the number of logical CPUs on the current machine, returns the optimal count of concurrent workers.*

### Protected Types

- typedef void(\* **StaticMetacallFunction**) (QObject \*, QMetaObject::Call, int, void \*\*)

### Protected Member Functions

- void **add** ([WorkerObject](#) \*const worker)
- virtual QObject \* **asQObject** ()=0  
*Return the target QObject (double inheritance)*
- virtual const QMetaObject \* **mocMetaObject** () const =0  
*The moc-generated metaObject of the target object.*
- const QMetaObject \* **replacementMetaObject** () const
- int **replacementQtMetacall** (QMetaObject::Call \_c, int \_id, void \*\*\_a)  
*Replaces slot call distribution of the target QObject.*
- int **replacementStaticQtMetacall** (QMetaObject::Call \_c, int \_id, void \*\*\_a)
- virtual StaticMetacallFunction **staticMetacallPointer** ()=0
- virtual int **WorkerObjectQtMetacall** (QMetaObject::Call \_c, int \_id, void \*\*\_a)=0  
*The qt\_metacall of [WorkerObject](#), one level above the target QObject.*

### Protected Attributes

- int **m\_currentIndex** = 0
- StaticMetacallFunction **m\_originalStaticMetacall** = nullptr
- QMetaObject \* **m\_replacementMetaObject** = nullptr
- QList< [WorkerObject](#) \* > **m\_workers**

## 9.1037.1 Constructor & Destructor Documentation

### 9.1037.1.1 ParallelWorkers()

Digikam::ParallelWorkers::ParallelWorkers ( ) [default]

See [ParallelAdapter](#) for guidance how to use it.

## 9.1037.2 Member Function Documentation

### 9.1037.2.1 asQObject()

```
virtual QObject * Digikam::ParallelWorkers::asQObject ( ) [protected], [pure virtual]
```

Implemented in [Digikam::ParallelAdapter< A >](#).

### 9.1037.2.2 mocMetaObject()

```
virtual const QMetaObject * Digikam::ParallelWorkers::mocMetaObject ( ) const [protected],  
[pure virtual]
```

Implemented in [Digikam::ParallelAdapter< A >](#).

### 9.1037.2.3 WorkerObjectQtMetacall()

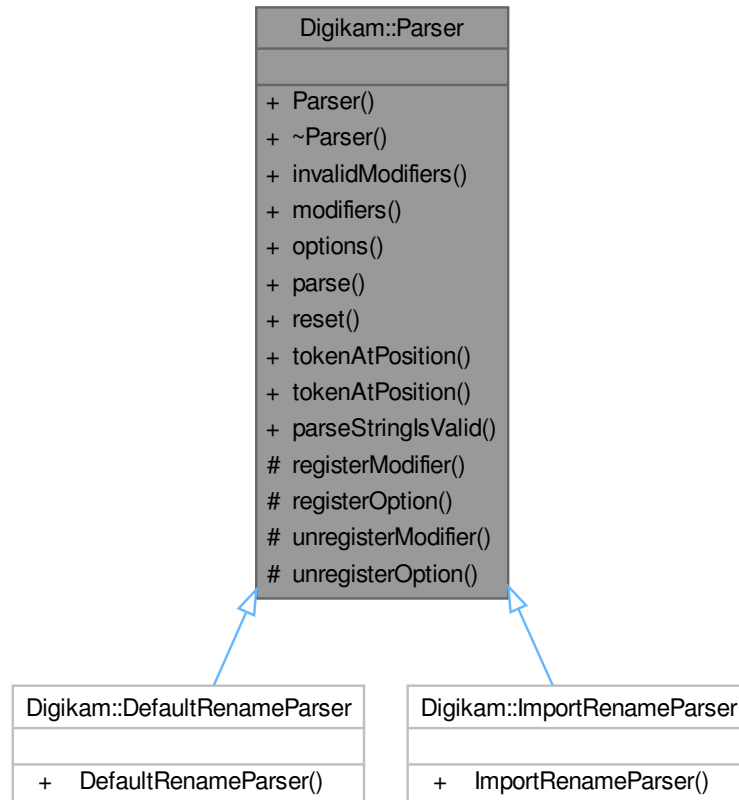

```
virtual int Digikam::ParallelWorkers::WorkerObjectQtMetacall (   
    QMetaObject::Call _c,  
    int _id,  
    void ** _a ) [protected], [pure virtual]
```

Implemented in [Digikam::ParallelAdapter< A >](#).

## 9.1038 Digikam::Parser Class Reference

Inheritance diagram for Digikam::Parser:

### Public Member Functions

- `ParseResults` **invalidModifiers** (`ParseSettings` &settings)
- `RulesList` **modifiers** () const
- `RulesList` **options** () const
- `QString` **parse** (`ParseSettings` &settings)
- void **reset** ()
- bool **tokenAtPosition** (`ParseSettings` &settings, int pos)
- bool **tokenAtPosition** (`ParseSettings` &settings, int pos, int &start, int &length)

### Static Public Member Functions

- static bool **parseStringIsValid** (const `QString` &str)  
*check if the given parse string is valid*

## Protected Member Functions

- void **registerModifier** ([Rule](#) \*modifier)
- void **registerOption** ([Rule](#) \*option)
- void **unregisterModifier** (const [Rule](#) \*modifier)
- void **unregisterOption** (const [Rule](#) \*option)

## 9.1038.1 Member Function Documentation

### 9.1038.1.1 parseStringIsValid()

```
bool Digikam::Parser::parseStringIsValid (
    const QString & str ) [static]
```

#### Parameters

<i>str</i>	the parse string
------------	------------------

#### Returns

true if valid / can be parsed

## 9.1039 Digikam::ParseResults Class Reference

### Public Types

- typedef QPair< int, int > **ResultsKey**
- typedef QMap< ResultsKey, ResultsValue > **ResultsMap**
- typedef QPair< QString, QString > **ResultsValue**

### Public Member Functions

- void **addEntry** (const ResultsKey &key, const ResultsValue &value)
- void **append** (const [ParseResults](#) &results)
- void **clear** ()
- void **debug** () const
- void **deleteEntry** (const ResultsKey &key)
- bool **hasKey** (const ResultsKey &key)
- bool **hasKeyAtApproximatePosition** (int pos) const
- bool **hasKeyAtPosition** (int pos) const
- bool **isEmpty** () const
- ResultsKey **keyAtApproximatePosition** (int pos) const
- ResultsKey **keyAtPosition** (int pos) const
- QList< ResultsKey > **keys** () const
- int **offset** (const ResultsKey &key) const
- QString **replaceTokens** (const QString &markedString) const
- QString **result** (const ResultsKey &key) const
- QString **resultValuesAsString** () const
- QString **token** (const ResultsKey &key) const
- QList< ResultsValue > **values** () const

## 9.1040 Digikam::ParseSettings Class Reference

### Public Member Functions

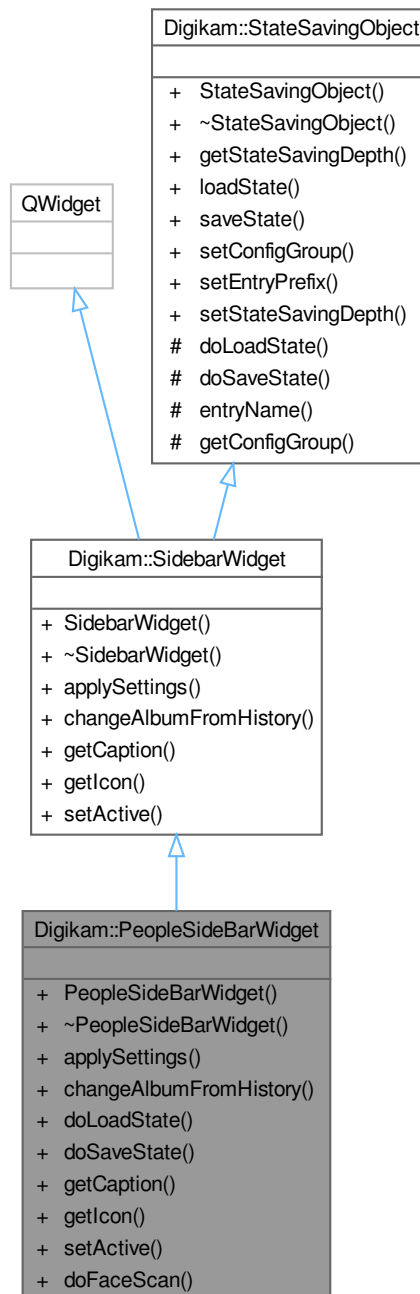

- **ParseSettings** ()  
*default constructor*
- **ParseSettings** (const [ItemInfo](#) &info)  
*ItemInfo constructor.*
- **ParseSettings** (const QString &\_parseString)
- **ParseSettings** (const QString &\_parseString, const [ItemInfo](#) &info)
- bool **isValid** () const

### Public Attributes

- QDateTime **creationTime**
- ParseResults::ResultsKey **currentResultsKey**
- int **cutFileName** = 0
- QUrl **fileUrl**
- [ParseResults](#) **invalidModifiers**
- [AdvancedRenameManager](#) \* **manager** = nullptr
- QString **parseString**
- [ParseResults](#) **results**
- int **startIndex** = 1
- QString **str2Modify**
- bool **useOriginalFileExtension** = true

## 9.1041 Digikam::PeopleSideBarWidget Class Reference

Inheritance diagram for Digikam::PeopleSideBarWidget:

### Signals

- void **requestFaceMode** (bool on)
- void **signalFindDuplicates** (const QList< [TAlbum](#) \* > &albums)

## Signals inherited from [Digikam::SidebarWidget](#)

- void **requestActiveTab** ([SidebarWidget](#) \*)  
*This signal can be emitted if this sidebar widget wants to be the one that is active.*
- void **signalNotificationError** (const QString &message, int type)  
*To dispatch error message to temporized pop-up notification widget hosted with icon-view.*

## Public Member Functions

- **PeopleSideBarWidget** (QWidget \*const parent, [TagModel](#) \*const tagModel, [SearchModificationHelper](#) \*const searchModificationHelper)
- void **applySettings** () override  
*This method is invoked when the application settings should be (re-) applied to this widget.*
- void **changeAlbumFromHistory** (const QList< [Album](#) \* > &album) override  
*This is called on this widget when the history requires to move back to the specified album.*
- void **doLoadState** () override  
*Implement this hook method for state loading.*
- void **doSaveState** () override  
*Implement this hook method for state saving.*
- const QString **getCaption** () override  
*Must be implemented to return the title of this sidebar's tab.*
- const QIcon **getIcon** () override  
*Must be implemented and return the icon that shall be visible for this sidebar widget.*
- void **setActive** (bool active) override  
*This method is called if the visible sidebar widget is changed.*

## Public Member Functions inherited from [Digikam::SidebarWidget](#)

- [SidebarWidget](#) (QWidget \*const parent)  
*Constructor.*
- **~SidebarWidget** () override=default  
*Destructor.*

## Public Member Functions inherited from [Digikam::StateSavingObject](#)

- [StateSavingObject](#) (QObject \*const host)  
*Constructor.*
- virtual **~StateSavingObject** ()  
*Destructor.*
- [StateSavingDepth](#) **getStateSavingDepth** () const  
*Returns the depth used for state saving or loading.*
- void **loadState** ()  
*Invokes loading the class' state.*
- void **saveState** ()  
*Invokes saving the class' state.*
- virtual void **setConfigGroup** (const KConfigGroup &group)  
*Sets a dedicated config group that will be used to store and reload the state from.*
- virtual void **setEntryPrefix** (const QString &prefix)  
*Define a prefix that will be used for every entry in the config group.*
- void **setStateSavingDepth** (const [StateSavingDepth](#) depth)  
*Sets the depth used for state saving or loading.*

## Static Public Member Functions

- static void **doFaceScan** (const [FaceScanSettings](#) &faceScanSettings)

## Additional Inherited Members

## Public Types inherited from [Digikam::StateSavingObject](#)

- enum [StateSavingDepth](#) { [INSTANCE](#) , [DIRECT\\_CHILDREN](#) , [RECURSIVE](#) }

*This enum defines the "depth" of the [StateSavingObject::loadState\(\)](#) and [StateSavingObject::saveState\(\)](#) methods.*

## Protected Member Functions inherited from [Digikam::StateSavingObject](#)

- QString [entryName](#) (const QString &base) const  
*Always use this method to create config group entry names.*
- KConfigGroup [getConfigGroup](#) () const  
*Returns the config group that must be used for state saving and loading.*

## 9.1041.1 Member Function Documentation

### 9.1041.1.1 [applySettings\(\)](#)

```
void Digikam::PeopleSideBarWidget::applySettings ( ) [override], [virtual]
```

Implements [Digikam::SidebarWidget](#).

### 9.1041.1.2 [changeAlbumFromHistory\(\)](#)

```
void Digikam::PeopleSideBarWidget::changeAlbumFromHistory (
    const QList< Album * > & album ) [override], [virtual]
```

Implements [Digikam::SidebarWidget](#).

### 9.1041.1.3 [doLoadState\(\)](#)

```
void Digikam::PeopleSideBarWidget::doLoadState ( ) [override], [virtual]
```

Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 9.1041.1.4 [doSaveState\(\)](#)

```
void Digikam::PeopleSideBarWidget::doSaveState ( ) [override], [virtual]
```

Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 9.1041.1.5 `getCaption()`

```
const QString Digikam::PeopleSideBarWidget::getCaption ( ) [override], [virtual]
```

#### Returns

localized title string

Implements [Digikam::SidebarWidget](#).

### 9.1041.1.6 `getIcon()`

```
const QIcon Digikam::PeopleSideBarWidget::getIcon ( ) [override], [virtual]
```

#### Returns

pixmap icon

Implements [Digikam::SidebarWidget](#).

### 9.1041.1.7 `setActive()`

```
void Digikam::PeopleSideBarWidget::setActive (
    bool active ) [override], [virtual]
```

#### Parameters

<i>active</i>	if true, this widget is the new active widget, if false another widget is active
---------------	--

Implements [Digikam::SidebarWidget](#).

## 9.1042 Digikam::PersistentWidgetDelegateOverlay Class Reference

Inheritance diagram for Digikam::PersistentWidgetDelegateOverlay:

### Public Slots

- void **enterPersistentMode** ()
- void **leavePersistentMode** ()

- void **setPersistent** (bool persistent)  
*Enters persistent mode.*
- void **storeFocus** ()

### Public Member Functions

- **PersistentWidgetDelegateOverlay** (QObject \*const parent)  
*This class offers additional / modified behavior: When a "persistent" mode is entered, it will not move by mouse hover, but stay and only move on mouse click.*
- bool **isPersistent** () const
- void **setActive** (bool active) override  
*If active is true, this will call [createWidget\(\)](#), initialize the widget for use, and setup connections for the virtual slots.*

### Public Member Functions inherited from [Digikam::AbstractWidgetDelegateOverlay](#)

- **AbstractWidgetDelegateOverlay** (QObject \*const parent)  
*This class provides functionality for using a widget in an overlay.*

### Public Member Functions inherited from [Digikam::ItemDelegateOverlay](#)

- **ItemDelegateOverlay** (QObject \*const parent=nullptr)
- virtual bool **acceptsDelegate** (QAbstractItemDelegate \*) const
- QAbstractItemDelegate \* **delegate** () const
- virtual void **mouseMoved** (QMouseEvent \*e, const QRect &visualRect, const QModelIndex &index)  
*Only these two methods are implemented as virtual methods.*
- virtual void **paint** (QPainter \*p, const QStyleOptionViewItem &option, const QModelIndex &index)
- void **setDelegate** (QAbstractItemDelegate \*delegate)
- void **setView** (QAbstractItemView \*view)
- QAbstractItemView \* **view** () const

### Protected Member Functions

- void **hide** () override  
*Called when the widget shall be hidden (mouse cursor left index, viewport, uninstalled etc.).*
- QModelIndex **index** () const
- void **restoreFocus** ()
- virtual void **setFocusOnWidget** ()  
*Reimplement to set the focus on the correct subwidget.*
- virtual void **showOnIndex** (const QModelIndex &index)  
*see [slotEntered\(\)](#)*
- void **slotEntered** (const QModelIndex &index) override  
*Most overlays reimplement this slot to get the starting point for repositioning a widget etc.*
- void **slotLayoutChanged** () override
- void **slotReset** () override  
*Default implementations of these three slots call [hide\(\)](#)*
- void **slotRowsRemoved** (const QModelIndex &parent, int start, int end) override
- void **slotViewportEntered** () override
- void **viewportLeaveEvent** (QObject \*obj, QEvent \*event) override  
*Called when a [QEvent::Leave](#) of the viewport is received.*

## Protected Member Functions inherited from [Digikam::AbstractWidgetDelegateOverlay](#)

- virtual bool [checkIndex](#) (const QModelIndex &index) const  
*Return true here if you want to show the overlay for the given index.*
- bool [checkIndexOnEnter](#) (const QModelIndex &index) const  
*Utility method called from slotEntered.*
- virtual QWidget \* [createWidget](#) ()=0  
*Create your widget here.*
- bool [eventFilter](#) (QObject \*obj, QEvent \*event) override
- virtual QString [notifyMultipleMessage](#) (const QModelIndex &, int number)
- QWidget \* [parentWidget](#) () const  
*Returns the widget to be used as parent for your widget created in [createWidget\(\)](#)*
- virtual void [widgetEnterEvent](#) ()  
*Called when a QEvent::Enter resp.*
- void [widgetEnterNotifyMultiple](#) (const QModelIndex &index)  
*A sample implementation for above methods.*
- virtual void [widgetLeaveEvent](#) ()
- void [widgetLeaveNotifyMultiple](#) ()

## Protected Member Functions inherited from [Digikam::ItemDelegateOverlay](#)

- QList< QModelIndex > [affectedIndexes](#) (const QModelIndex &index) const
- bool [affectsMultiple](#) (const QModelIndex &index) const  
*For the context that an overlay can affect multiple items: Assuming the currently overlaid index is given.*
- int [numberOfAffectedIndexes](#) (const QModelIndex &index) const
- bool [viewHasMultiSelection](#) () const  
*Utility method.*

## Additional Inherited Members

## Signals inherited from [Digikam::ItemDelegateOverlay](#)

- void [hideNotification](#) ()
- void [requestNotification](#) (const QModelIndex &index, const QString &message)
- void [update](#) (const QModelIndex &index)

## Protected Slots inherited from [Digikam::AbstractWidgetDelegateOverlay](#)

## Protected Slots inherited from [Digikam::ItemDelegateOverlay](#)

- virtual void [visualChange](#) ()  
*Called when any change from the delegate occurs - when the overlay is installed, when size hints, styles or fonts change.*

## Protected Attributes inherited from [Digikam::AbstractWidgetDelegateOverlay](#)

- bool [m\\_mouseButtonPressedOnWidget](#) = false
- QWidget \* [m\\_widget](#) = nullptr

## Protected Attributes inherited from [Digikam::ItemDelegateOverlay](#)

- `QAbstractItemDelegate * m_delegate = nullptr`
- `QAbstractItemView * m_view = nullptr`

### 9.1042.1 Constructor & Destructor Documentation

#### 9.1042.1.1 PersistentWidgetDelegateOverlay()

```
Digikam::PersistentWidgetDelegateOverlay::PersistentWidgetDelegateOverlay (
    QObject *const parent ) [explicit]
```

If the overlay widget had focus, it will be restored on show.

### 9.1042.2 Member Function Documentation

#### 9.1042.2.1 hide()

```
void Digikam::PersistentWidgetDelegateOverlay::hide ( ) [override], [protected], [virtual]
```

Default implementation [hide\(\)](#)s `m_widget`.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

#### 9.1042.2.2 setActive()

```
void Digikam::PersistentWidgetDelegateOverlay::setActive (
    bool active ) [override], [virtual]
```

If active is false, this will delete the widget and disconnect all signal from model and view to this object (!)

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

#### 9.1042.2.3 setFocusOnWidget()

```
void Digikam::PersistentWidgetDelegateOverlay::setFocusOnWidget ( ) [protected], [virtual]
```

Default implementation sets focus on widget()

Reimplemented in [Digikam::AssignNameOverlay](#).

#### 9.1042.2.4 setPersistent

```
void Digikam::PersistentWidgetDelegateOverlay::setPersistent (
    bool persistent ) [slot]
```

The overlay is moved because of mouse hover.

#### 9.1042.2.5 showOnIndex()

```
void Digikam::PersistentWidgetDelegateOverlay::showOnIndex (
    const QModelIndex & index ) [protected], [virtual]
```

Reimplemented in [Digikam::AssignNameOverlay](#).

#### 9.1042.2.6 slotEntered()

```
void Digikam::PersistentWidgetDelegateOverlay::slotEntered (
    const QModelIndex & index ) [override], [protected], [virtual]
```

This class instead provides [showOnIndex\(\)](#) which you shall use for this purpose.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

#### 9.1042.2.7 slotLayoutChanged()

```
void Digikam::PersistentWidgetDelegateOverlay::slotLayoutChanged ( ) [override], [protected],
[virtual]
```

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

#### 9.1042.2.8 slotReset()

```
void Digikam::PersistentWidgetDelegateOverlay::slotReset ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

#### 9.1042.2.9 slotRowsRemoved()

```
void Digikam::PersistentWidgetDelegateOverlay::slotRowsRemoved (
    const QModelIndex & parent,
    int start,
    int end ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

#### 9.1042.2.10 slotViewportEntered()

```
void Digikam::PersistentWidgetDelegateOverlay::slotViewportEntered ( ) [override], [protected],
[virtual]
```

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 9.1042.2.11 viewportLeaveEvent()

```
void Digikam::PersistentWidgetDelegateOverlay::viewportLeaveEvent (
    QObject * obj,
    QEvent * event ) [override], [protected], [virtual]
```

The default implementation [hide\(\)](#)s.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

## 9.1043 Digikam::PhotoInfoContainer Class Reference

### Public Member Functions

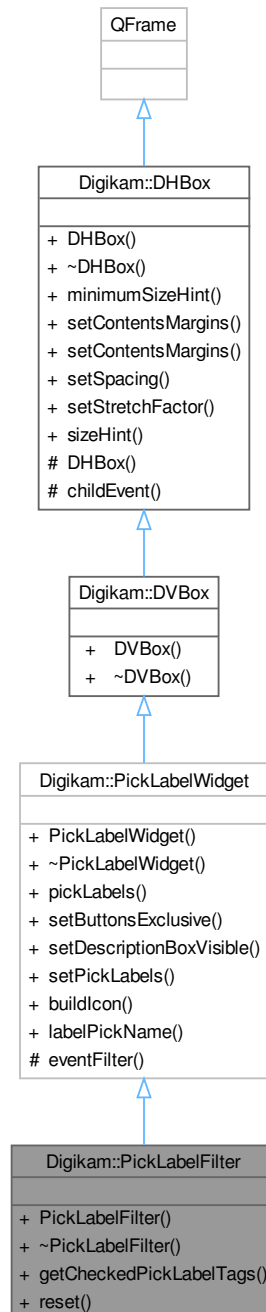

- **PhotoInfoContainer** (const [PhotoInfoContainer](#) &)=default
- bool **isEmpty** () const

## 9.1047.1 Member Function Documentation

### 9.1047.1.1 setButtonsExclusive()

```
void Digikam::PickLabelWidget::setButtonsExclusive (
    bool b )
```

Default is true as only one can be selected. Non-exclusive mode is dedicated for Advanced Search tool.

### 9.1047.1.2 setPickLabels()

```
void Digikam::PickLabelWidget::setPickLabels (
    const QList< PickLabel > & list )
```

Pass an empty list to clear all selection.

## 9.1048 Digikam::PlaceholderWidget Class Reference

Inheritance diagram for Digikam::PlaceholderWidget:

### Public Member Functions

- **PlaceholderWidget** (QWidget \*const parent=nullptr)
- void **setMessage** (const QString &message)

## 9.1049 Digikam::PointTransformAffine Class Reference

### Public Member Functions

- **PointTransformAffine** (const std::vector< std::vector< float > > &m\_)
- **PointTransformAffine** (const std::vector< std::vector< float > > &m\_, const std::vector< float > &b\_)
- const std::vector< float > & **get\_b** () const
- const std::vector< std::vector< float > > & **get\_m** () const
- const std::vector< float > **operator()** (const std::vector< float > &p) const

## 9.1050 Digikam::PositionKeys Class Reference

Inheritance diagram for Digikam::PositionKeys:

### Public Member Functions

- [PositionKeys \(\)](#)

### Public Member Functions inherited from [Digikam::DbKeysCollection](#)

- [DbKeysCollection](#) (const QString &n)  
*Default constructor.*
- QString [collectionName](#) () const  
*Get the name of the DbKeysCollection.*
- QString [getValue](#) (const QString &key, [ParseSettings](#) &settings)  
*Get a value from the database.*
- DbKeyIdsMap [ids](#) () const  
*Get all IDs associated with this key collection.*

### Protected Member Functions

- QString [getDbValue](#) (const QString &key, [ParseSettings](#) &settings) override  
*Abstract method for retrieving the value from the database for the given key.*

## Protected Member Functions inherited from [Digikam::DbKeysCollection](#)

- void [addId](#) (const QString &id, const QString &description)  
*Add an ID to the key collection.*

### 9.1050.1 Constructor & Destructor Documentation

#### 9.1050.1.1 PositionKeys()

```
Digikam::PositionKeys::PositionKeys ( )
```

### 9.1050.2 Member Function Documentation

#### 9.1050.2.1 getDbValue()

```
QString Digikam::PositionKeys::getDbValue (
    const QString & key,
    ParseSettings & settings ) [override], [protected], [virtual]
```

This method has to be implemented by all child classes. It is called by the [getValue\(\)](#) method.

#### Parameters

<i>key</i>	the key representing the value in the database
<i>settings</i>	the <a href="#">ParseSettings</a> object holding all relevant information about the image.

#### Returns

the value of the given database key

See also

[DbKeysCollection::getValue\(\)](#)

Implements [Digikam::DbKeysCollection](#).
